Eat Your Colors is filled with information on such news-making topics as phytoestrogens, which can reduce the risk of breast and prostate cancer; lutein and zeaxanthin, which protect the eyes of computer users and prevent the common eye disorder macular degeneration; and anthocyanidins, which reduce inflammation in cases of chronic disease. And it offers practical, easy-to-follow advice on: --creating meal plans using the optimal foods for each color--using herbs, spices, sauces, and condiments to balance off-colors--discovering color weaknesses and combating them by eating the right foods Offering a unique way of thinking about diet, Eat Your Colors will do for body type what Eat Right for Your Type did for blood type.

2016-12-12 Approximately 65% of our population is overweight and 12% are morbidly obese. This is despite more than 25 years of attempted medical management. Clearly all current efforts have failed to control this enormous problem. Could it be that we have failed to recognize the cause of the disease and therefore have misdirected our efforts? — Alfredo Fernandez, MD, FASMBS, Surgeon, Tampa, Florida Reducing obesity through bariatric surgery provides a sustainable weight loss regimen, because it restricts the size of the stomach and limits food intake. This nutritional guide provides health care practitioners descriptions and answers to the many questions bariatric surgery patients need to know and ask in support group meetings and individual counseling sessions. The first chapter focuses on Selling Obesity and Food as a Cheap and Legal Drug, outlining how food advertising, portion size increases, and food frauds have contributed to the obesity crisis. New research into gut hormones, microbiome influence on obesity, firmicutes, and histamine are included, as well as pregnancy after bariatric surgery and lifestyle changes—eating, sleep, hydration, stress management—needed for success after surgery. Many health care practitioners will use the Post Op Discharge Diet stages of progression to explain how the patient needs to prepare for their liquid diet and overcome numerous issues like dumping syndrome, hypoglycemia, and alcohol and caffeine consumption.
