1 technology drive peabody ma: *Handbook of Remote Biometrics* Massimo Tistarelli, Stan Z. Li, Rama Chellappa, 2009-06-02 The development of technologies for the identification of individuals has driven the interest and curiosity of many people. Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements, scientists and engineers have been trying to invent new devices and classification systems to capture the human

identity from its body measurements. One of the main limitations of the precursors of today's biometrics, which is still present in the vast majority of the existing biometric systems, has been the need to keep the device in close contact with the subject to capture the biometric measurements. This clearly limits the applicability and convenience of biometric systems. This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance. Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero, Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics (IAPR TC4). The last four chapters of the book are derived from some of the best presentations by the participating students of the school. The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics.

1 technology drive peabody ma: *Rethinking Civilizational Analysis* Said Arjomand, Edward A Tiryakian, 2004-05-19 'At last, a volume on civilization that truly reflects the complexity of multiple civilizations. The wealth of contributions Arjomand and Tiryakian have assembled demonstrates the value of an old concept for understanding the awful dilemmas confronting human kind in the global age. Its thoroughgoing renewal here establishes this book as the essential benchmark for future scholars of civilization' - Martin Albrow, Founding Editor of International Sociology and author of *The Global Age* - winner of the European Amalfi Prize, 1997 'In our tension filled world, many are heralding, and others fearing, a clash of civilizations. The contributors to this volume provides a healthy and persuasive argument about why this clash need not, and certainly should not, take place. They do so, moreover, not by rejecting the concept of civilization, but by developing a less primordial, homogenous, and essentialist concept of it. An important collection that provides illumination in this sometimes frighteningly dark time' - Jeffrey Alexander, Professor and Chair of Sociology at Yale University 'The concept of civilization may well replace the notions of globalization and identity as the core component in the vocabulary of 21st century sociology. The authors contribute a great deal to the clarification of fashionable controversies around the clash of civilizations and multiculturalism. They go a long way toward purging the concept of civilization of its ideological overtones, and they succeed admirably in turning it into powerful analytic tool of an emerging field of macrosociology, known already as civilizational analysis' - Piotr Sztompka, President, International Sociological Association Although the concept of 'civilization' has deep roots in the social sciences, there is an urgent need to re-think it for contemporary times. This book points to an exhaustion in using 'the nation state' and 'world system' as the basic macro-units of social analysis because they do not get to grips with the 'soft power' variable of cultural factors involved in global aspects of development. Also, globalization requires us to reconsider the link between civilization and a fixed or given territory. This book focuses upon the dynamic aspect of civilizations. Among the topics covered are: · Civilizational analysis and social theory · Global civilization and local cultures · Civilizational forms · Rationalization and Civilization · Civilizations as zones of prestige · Historical and comparative dimensions of civilization · The clash of civilizations.
