

behav brain research impact factor

behav brain research impact factor is a critical metric used to evaluate the significance and influence of the journal Behavioral Brain Research within the scientific community. This article explores the concept of impact factor in depth, focusing on how it applies specifically to Behavioral Brain Research. It examines the journal's standing in the fields of neuroscience and behavioral science, the methodology behind impact factor calculations, and the implications for researchers and institutions. Additionally, it provides insights into the trends of the journal's impact factor over recent years and compares it with related publications. This comprehensive overview will serve as a valuable resource for academics, researchers, and students interested in the journal's reputation and scientific impact. The following sections detail these aspects in a structured and informative manner.

- Understanding the Impact Factor
- Overview of Behavioral Brain Research Journal
- Behavioral Brain Research Impact Factor Analysis
- Factors Influencing the Journal's Impact Factor
- Comparative Analysis with Similar Journals
- Implications of the Impact Factor for Researchers

Understanding the Impact Factor

The impact factor is a widely recognized indicator used to measure the average number of citations to articles published in a scientific journal. It serves as a proxy for the journal's relative importance and influence within its field. The impact factor is calculated annually by indexing agencies such as Clarivate Analytics through the Journal Citation Reports (JCR). The formula takes into account the citations received in a given year by articles published in the previous two years, divided by the total number of citable articles published during those two years.

Calculation Methodology

The impact factor calculation involves two key components: the numerator, which is the total number of citations in the evaluation year to articles

published in the prior two years, and the denominator, which is the total number of “citable items” published in those two years. Citable items typically include research articles and reviews, excluding editorials and letters. This quantitative measure reflects how frequently a journal’s articles are cited on average, signaling its influence and relevance in ongoing research.

Significance in Academic Publishing

The impact factor holds considerable significance in academic publishing as it influences the perception of a journal’s prestige and quality. Institutions, funding agencies, and researchers often use impact factor metrics to assess where to publish, which journals to follow, and how to evaluate the scholarly contribution of research outputs. Despite certain criticisms regarding its limitations, the impact factor remains a central metric in the evaluation of scientific journals.

Overview of Behavioral Brain Research Journal

Behavioral Brain Research is a peer-reviewed scientific journal that publishes original research articles focusing on the neural bases of behavior. It covers a broad spectrum of topics within behavioral neuroscience, including cognitive processes, neurophysiology, neuropharmacology, and neuropsychology. Established several decades ago, the journal has maintained a reputation for rigor and quality in the dissemination of experimental findings that bridge psychology and neuroscience.

Scope and Subject Areas

The journal emphasizes studies that enhance understanding of brain function in relation to behavior. Its scope includes:

- Animal models of behavior
- Neurobiological mechanisms underlying cognitive functions
- Neural circuitry and plasticity
- Psychopharmacological interventions and effects
- Behavioral assessments in neurological disorders

Such a broad range enables Behavioral Brain Research to attract interdisciplinary submissions that contribute to the advancement of neural and behavioral sciences.

Editorial Standards and Peer Review

The journal employs a rigorous peer review process to ensure the quality and integrity of published research. Manuscripts undergo evaluation by experts in the relevant fields, focusing on methodological soundness, originality, and relevance. This commitment to high editorial standards contributes to the journal's credibility and its impact factor.

Behavioral Brain Research Impact Factor Analysis

The behav brain research impact factor reflects the journal's citation performance over recent years, providing insight into its influence within neuroscience and psychology disciplines. Monitoring this metric helps track the journal's growth and the reception of its published studies in the scientific community.

Recent Impact Factor Trends

In the past decade, Behavioral Brain Research has experienced fluctuations in its impact factor, influenced by evolving research trends and publication strategies. Generally, the journal has maintained an impact factor within the range of approximately 2.5 to 3.5, which is competitive among neuroscience journals focusing on behavioral studies. This level indicates solid engagement and citation of its articles.

Factors Affecting Citation Rates

Citation rates, which directly impact the behav brain research impact factor, depend on several factors:

- Relevance and novelty of research topics
- Visibility and accessibility of published articles

- Promotion and dissemination strategies by the publisher
- Collaborations and cross-disciplinary appeal
- Timeliness of publication and response to emerging scientific questions

These elements contribute to how frequently articles are cited and thus influence the journal's impact factor.

Factors Influencing the Journal's Impact Factor

Understanding the dynamics behind the behavioral brain research impact factor requires examining both internal editorial policies and external scientific trends. Several key factors shape the journal's citation metrics and overall impact.

Editorial Policy and Publication Types

The types of articles published, such as original research, reviews, and meta-analyses, significantly affect citation frequency. Review articles tend to attract more citations due to their comprehensive nature, thereby potentially boosting the journal's impact factor. Behavioral Brain Research strategically includes a mix of article types to balance citation potential and scientific rigor.

Research Field and Community Size

The journal's focus on behavioral neuroscience, a specialized yet growing field, affects its citation patterns. The size of the research community and the pace of scientific advancement within this domain influence how often articles are cited. Emerging topics within behavioral brain research can drive increased attention and citations.

Open Access and Article Visibility

Open access policies can enhance the visibility and citation rates of articles. While Behavioral Brain Research primarily operates under a subscription model, selective open access options and institutional agreements can facilitate broader dissemination. Increased accessibility generally correlates with higher citation counts, impacting the overall

impact factor.

Comparative Analysis with Similar Journals

Evaluating the behavior brain research impact factor in context involves comparing it with other journals in related fields. This comparative approach highlights the journal's relative standing and identifies competitive strengths and areas for growth.

Peer Journals and Their Impact Factors

Several journals publish research in behavioral neuroscience and related disciplines. Examples include:

- Neuropsychologia
- Journal of Neuroscience
- Brain Research
- Neuroscience Letters
- Frontiers in Behavioral Neuroscience

While some of these journals have higher impact factors due to broader scopes or larger readerships, Behavioral Brain Research maintains a focused niche that supports specialized research communication.

Strengths and Opportunities

Behavioral Brain Research's impact factor reflects its strength in publishing high-quality, focused studies on neural mechanisms of behavior. Opportunities to enhance its impact include increasing the publication of high-citation review articles, expanding international collaborations, and improving article visibility through digital platforms.

Implications of the Impact Factor for

Researchers

The behavior brain research impact factor has practical implications for authors, institutions, and funding bodies. Understanding these implications aids in strategic decision-making related to research dissemination and career development.

Influence on Publication Decisions

Researchers often consider the impact factor when selecting journals for manuscript submission. A reputable impact factor like that of Behavioral Brain Research indicates a respected venue that can enhance the visibility and citation potential of their work. Publishing in such journals may contribute positively to an author's academic profile.

Academic Evaluation and Funding

Institutions and funding agencies frequently use impact factor metrics as part of their evaluation criteria for research quality and productivity. Publishing in journals with a solid impact factor can support grant applications, tenure reviews, and performance assessments, making it a critical factor in academic advancement.

Limitations and Considerations

While the impact factor is influential, it should not be the sole criterion for evaluating research quality or journal prestige. Researchers are encouraged to consider additional factors such as peer review quality, journal scope, and audience relevance to ensure the best fit for their work.

Frequently Asked Questions

What is the current impact factor of Behavioural Brain Research?

As of the latest Journal Citation Reports, the impact factor of Behavioural Brain Research is approximately 3.2. However, this value can change annually, so it is best to check the most recent data on the journal's official website or relevant databases.

How does the impact factor of Behavioural Brain Research compare to other neuroscience journals?

Behavioural Brain Research has a moderate impact factor compared to top-tier neuroscience journals. While leading journals like Neuron or Nature Neuroscience have higher impact factors above 10, Behavioural Brain Research maintains a respectable position in the field with an impact factor around 3.

Why is the impact factor important for Behavioural Brain Research?

The impact factor reflects the average number of citations received per paper published in the journal. It is important as it indicates the journal's influence and prestige in the field of behavioral neuroscience, helping authors decide where to submit their work.

Where can I find the official impact factor of Behavioural Brain Research?

The official impact factor can be found on the Clarivate Analytics Journal Citation Reports website, or on the Elsevier journal homepage for Behavioural Brain Research. University libraries often provide access to these resources as well.

Has the impact factor of Behavioural Brain Research increased over recent years?

The impact factor of Behavioural Brain Research has shown a gradual increase over recent years, reflecting growing citations and relevance in the behavioral neuroscience community. Specific year-to-year data can be found in Journal Citation Reports.

Does the impact factor of Behavioural Brain Research affect manuscript acceptance?

While the impact factor indicates the journal's overall influence, manuscript acceptance is primarily based on the quality, novelty, and relevance of the research. However, publishing in a journal with a recognized impact factor can enhance the visibility of the work.

Can the impact factor of Behavioural Brain Research be used to assess individual article quality?

The impact factor is a journal-level metric and does not directly measure the quality or impact of individual articles. For assessing an individual article, citation counts, altmetrics, and peer reviews are more appropriate indicators.

Additional Resources

1. *Behavioral Neuroscience: Integrating Brain and Behavior*

This book provides a comprehensive overview of the neural mechanisms underlying behavior. It covers foundational concepts and recent advances in behavioral brain research, emphasizing experimental techniques and their applications. Ideal for researchers and students, it bridges the gap between behavioral studies and neurobiological processes.

2. *Principles of Neural Science*

Widely regarded as a seminal text in neuroscience, this book delves into the principles governing brain function and behavior. It explores the cellular and molecular basis of neural activity and links these to cognitive and behavioral outcomes. The detailed explanations support understanding of how brain research impacts behavioral sciences.

3. *Behavioral Brain Research: Methods and Protocols*

This volume focuses on experimental methods used in behavioral brain research, providing protocols for assessing animal models and human subjects. It emphasizes reproducibility and accuracy in measuring behavioral outcomes linked to neural function. Researchers will find practical guidance for designing impactful experiments.

4. *Neurobiology of Learning and Memory*

Focusing on the neural substrates of learning and memory, this book explores how behavioral experiences shape brain function. It reviews cutting-edge research on synaptic plasticity and cognitive processes, highlighting the impact factor of studies in this domain. The integration of behavior and brain science is central to its narrative.

5. *Behavioral Neurogenetics*

This text examines the genetic underpinnings of behavior and brain function, demonstrating how gene expression influences neural circuits and behavioral phenotypes. It incorporates recent findings that have high impact in the field of behavioral brain research. The book is essential for understanding the genetic contributions to neurobehavioral traits.

6. *Brain and Behavior: An Introduction to Behavioral Neuroanatomy*

Offering a detailed introduction to the neuroanatomical structures involved in behavior, this book links brain regions with specific behavioral functions. It highlights research methodologies and their impact on advancing behavioral neuroscience. The clear illustrations and explanations support both students and professionals.

7. *Advances in Behavioral Brain Research*

This edited volume compiles recent high-impact studies that have advanced understanding of the neural bases of behavior. It covers diverse topics such as neuropharmacology, neuroimaging, and behavioral genetics. The collection underscores the dynamic nature and broad impact of current behavioral brain research.

8. *Behavioral Neuroscience of Stress*

This book explores how stress affects brain function and behavior, integrating findings from molecular, cellular, and systemic levels. It discusses the impact of stress research on mental health and behavioral disorders. The text is valuable for those studying the complex interplay between environment, brain, and behavior.

9. *Computational Models of Behavior and Brain Function*

Focusing on the use of computational approaches to understand brain-behavior relationships, this book highlights models that simulate neural circuits and predict behavioral outcomes. It emphasizes the impact of computational neuroscience in interpreting experimental data and guiding future research. Scholars interested in quantitative behavioral brain research will find this work indispensable.

behav brain research impact factor: Neuroactive metabolites of ethanol: a behavioral and neurochemical synopsis Merce Correa, John D Salamone, Elio Acquas, 2015-02-11 Ethanol is a very elusive drug, which has mechanisms of action that are diverse and relatively non-selective. Moreover, ethanol has been demonstrated to be a biologically active substance by itself, but also a pro-drug of the neuroactive metabolites, acetaldehyde and acetate. Acetaldehyde has traditionally been known as a toxic substance with several effects on multiple systems. However, in the last few decades evidence has accumulated to reveal the specific and, in some instances, distinct neural actions of acetaldehyde and acetate that are in part responsible for some of the observed psychoactive effects of ethanol. The present issue will address these challenges to provide an up-to-date synopsis of the behavioral and neurophysiological impact of the two direct metabolites of ethanol, acetaldehyde and acetate. In doing so, this issue will present human and rodent evidence on their behavioral and neurophysiological impact, either when administered alone as drugs, or when metabolically-derived from their parent compound. Emphasis will be placed to stress the importance of the different enzymatic systems that intervene to produce these metabolites, either peripherally and/or directly in the brain. Similarly, this Research Topic will be aimed at addressing some of the possible mechanisms of action of acetaldehyde and acetate in different brain areas and in different intracellular systems. Furthermore, the issue will lay out some of the suggested mechanisms of action of ethanol and of its metabolites by which they form adducts with other molecules and neurotransmitters such as dopamine and opioids (which lead to salsolinol and tetrahydropapaveroline, respectively), and their impact on the synthesis and actions of neuromodulators such as adenosine and the cannabinoid system.

behav brain research impact factor: Index Medicus , 2002-07 Vols. for 1963- include as pt. 2 of the Jan. issue: Medical subject headings.

behav brain research impact factor: Behavioral Models in Stress Research Allan V. Kalueff, Justin L. LaPorte, 2008 Stress is an adaptive response that has developed throughout evolution, and

is associated with multiple changes in the biochemistry, histology and physiology of an organism. As stress may induce or contribute to multiple neuropsychiatric disorders, the rigorous investigation of the neural substrates of stress has become a critical endeavour of contemporary biomedical science. This book explores the physiological responses that researchers have attempted to assess in stress-evoked behavioural changes, using both human and animal experimental models in clinical and non-clinical research. Though all aspects of the field have their challenges, animal experimental research of stress is a particularly difficult but meaningful task. This book provides succinct and relevant summaries of progress in the area of assessing stress response and the conditions contributing to it.

behav brain research impact factor: Handbook of Behavior Genetics Yong-Kyu Kim, 2009-03-25 Behavior Genetics is an interdisciplinary area combining behavioral sciences and genetics. The study of behavior genetics has become increasingly important as we see growth spurts in finding genes involved in complex behaviors following on advances in molecular genetic techniques. This domain has now become a vast common ground for scientists from very diverse fields including psychology, psychiatry, neurology, endocrinology, biochemistry, neuroimaging, and genetics. However, there are not many textbooks or references to which students in behavior genetics can access for their research and class. The purpose of this handbook is to offer research guides to the studies of genetic and environmental influences on a variety of complex behaviors in humans and animals. Unlike previous behavior genetics textbooks, this handbook will discuss current research and topics of interest to psychologists, psychiatrists, and geneticists. Utilizing methodologies and theories commonly used in behavior genetics, each chapter will begin with an overview of the selected topic; current research and issues will be intensively reviewed; and we will direct future research on the topic at the end of the chapter. So the handbook will integrate many of the basic issues of the Behavior Genetics and will enhance our understanding in many fields. Therefore, this handbook will provide future research endeavors for the next 10 years. Throughout this handbook the editor will collaborate with contributors who are internationally well known in the field. The Behavior Genetics Association members and the Behavior Genetics Editorial Advisory Board will be invited to review the manuscripts of this handbook.

behav brain research impact factor: Stereotypic Animal Behaviour Georgia Mason, Jeffrey Rushen, 2008-04-09 Abnormal behaviour patterns, from the jumping and somersaulting of caged laboratory mice to the pacing of enclosed 'big cats', are displayed by many millions of farm, zoo, research and companion animals. Including new chapters and over 30 contributors, this book focuses on the causation and treatment of these environment-induced stereotypic behaviours, and their implications for animal welfare and normalcy of brain functioning. The book begins by taking an ethological perspective, focusing on the constraints captivity places on animals' normal behavioural repertoires, and the effects these have on specific motivational systems. It then addresses the role of dysfunction, particularly the impact of chronic stress and impoverished environments on brain functioning. The book then moves on to explore how stereotypic behaviours can be tackled, once they have emerged, using diverse techniques from environmental enrichment to pharmaceutical intervention. It concludes by giving a new definition for 'stereotypic behaviour', and a discussion of future research directions.

behav brain research impact factor: Behavioral and neuroscientific analysis of economic decision making in animals Tobias Kalenscher, Marijn Van Wingerden, The experimental analysis of animal behavior has a rich tradition in psychology, behavioral ecology and many other scientific branches dedicated to the study of decision making. However, it has never enjoyed a similar popularity in economics. This has recently changed with the dawn of neuroeconomics – a discipline combining the analytic and experimental tools of psychology and economics with the technologies available in neuroscience to unravel the neurobiological mechanisms underlying economic behavior.

Since many of the sophisticated neuroscientific techniques can only be used on animals, neuroeconomists have come up with a large and ever-growing repertoire of animal models to probe economic decision making. Besides the value of using animals as model systems to emulate human economic behavior, the discipline of animal economic decision making exists in its very own right: an abundance of animal species at various evolutionary stages show behavior that complies with many of the predictions of economic theory, whilst, at the same time demonstrating violations of optimal choice models that are reminiscent of similar anomalies found in human behavior. Hence, the analysis of animal choice does not only offer insights into the evolutionary origins of economic decision making, it also testifies that the analysis of animal behavior is a convenient, economical and sound way to test competing economic decision models in optimally controlled experimental environments, to probe their neural implementation and to yield common denominators in choice behavior. In short, economic theory provides more than just an alternative language to describe animal psychology: its combination with biology, psychology and neuroscience gives way to synergy effects that open up new venues for studying economic choice. In this special issue, we would like to gather the latest results from this cross-disciplinary topic, address the overlap and discrepancies in (the neurobiology of) economic decision making found between species and identify the challenges that lie ahead in translating results from species to species, and ultimately to humans. The exclusive focus on non-human animals makes this Research Topic unique and distinct from previous special issues which covered a broader range of matters and subjects in the neurobiological analysis of decision making.

behav brain research impact factor: Hormones, Brain and Behavior , 2016-11-09

Hormones, Brain and Behavior, Third Edition offers a state-of-the-art overview of hormonally-mediated behaviors, including an extensive discussion of the effects of hormones on insects, fish, amphibians, birds, rodents, and humans. Entries have been carefully designed to provide a valuable source of information for students and researchers in neuroendocrinology and those working in related areas, such as biology, psychology, psychiatry, and neurology. This third edition has been substantially restructured to include both foundational information and recent developments in the field. Continuing the emphasis on interdisciplinary research and practical applications, the book includes articles aligned in five main subject sections, with new chapters included on genetic and genomic techniques and clinical investigations. This reference provides unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics. The topics cover an unusual breadth (from molecules to ecophysiology), ranging from basic science to clinical research, making this reference of interest to a broad range of scientists in a variety of fields. Comprehensive and updated coverage of a rapidly growing field of research Unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics Covers an unusual breadth of topics and subject fields, ranging from molecules to ecophysiology, and from basic science to clinical research Ideal resource for interdisciplinary learning and understanding in the fields of hormones and behavior

behav brain research impact factor: Early Life Stress and Depression Fushun Wang, Jiongjiong Yang, Fang Pan, Jason H. Huang, James Alan Bourgeois, 2020-02-13 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact.

behav brain research impact factor: Current Topics in Opioid Research Lawrence Toll, Kelly M. Standifer, Dominique Massotte, 2019-11-27

behav brain research impact factor: Ethanol, Its Active Metabolites, and Their

Mechanisms of Action: Neurophysiological and Behavioral Effects Elio Acquas, John D. Salamone, Mercè Correa, 2018-07-12 Ethanol, the main psychopharmacologically active ingredient of alcoholic drinks, represents a paradigmatic example of a research subject intrinsically able to perpetually self-generate interdisciplinary cutting-edge investigations. This eBook was inspired by the aim of providing an up-to-date characterization of the diverse effects of ethanol, of the possible mechanisms of action on different intracellular systems as well as of the hypothesized actions of ethanol and/or its metabolites on various neurotransmitters and neuromodulators. Indeed, the eBook provides a factual example of an excellent synthesis on the complex relationship between ethanol and its main biologically active metabolites (Chapter 1), on the behavioral and molecular consequences of early exposure to them (Chapter 2), on the recent proposals, advanced by the preclinical research, for new therapeutic approaches to distinct aspects of alcoholism (Chapter 3) and on the most recent and original preclinical evidence of the interactions between ethanol and/or its metabolites and the dopaminergic, adenosinergic and endocannabinoidergic systems (Chapter 4). Overall we believe that this eBook accomplishes its main goals of widening the perspective on this research subject and offering the readership a newer and, simultaneously, up-to-date and comprehensive scenery on ethanol's and ethanol's active metabolites neurophysiological and behavioral effects.

behav brain research impact factor: Translational Research Models and Methods for Mother-Infant Interactions and Developmental Studies Josephine Johns, Rina Eiden, Elizabeth M. Byrnes, John H. Gilmore, Sheryl Moy, Joan I. Morrell, Linda Mayes, Karen Grewen, 2012-10-01 The disruption of mother-infant interactions can have life-long detrimental consequences for offspring and mothers. This topic of Frontiers will focus on maternal-infant interactions including factors that may affect or alter infant or child development and maternal response capability in clinical and preclinical (animal) populations. Articles may highlight topics such as drug abuse, maternal neglect, altered reward systems, stress, biological and neural system development, child and infant behavioral development, genetics/epigenetics and intergenerational studies. Submissions can include research methods papers, reviews, original research articles, techniques and opinion articles that address the topics of interest. This Research Topic will highlight translational research including common measures and results found in both animal and human studies. Please contact one of the Editors for submission proposals or for additional information.

behav brain research impact factor: Behavioural Brain Research in Naturalistic and Semi-Naturalistic Settings E. Alleva, 1995-07-31 The September 1994 NATO ASI, held in Acquafredda di Maratea, Italy, had the goal of filling a gap in the behavioral neuroscience of mammals, namely the relations between ecology and behavior in the so-called laboratory species (today mostly mice and rats). To this end, a group of neuroscientists who have developed an approach of combining laboratory and field techniques for the study of brain, behavior, and ecology in singing and food-storing birds were brought together with students of mouse and rat behavior with a penchant towards evolutionary biology. The proceedings, including informal discussion groups, are organized in four parts: brain, behavior, ontogeny, and evolution; bird studies; hippocampus--a hot issue; and behavioral brain research, methodology, and telemetry.
