Turning existential therapy on its head, this exciting, all-new title approaches the theory from a positive, rather than the traditional deficit model. Authored by a leading figure in existential therapy, Jerrold Lee Shapiro, the aim is to make existential therapy positive and easily accessible to a wide audience through a pragmatic, stage wise model. beyond therapy brandon ms: Intervention & Strategies in Counseling and Psychotherapy Richard E. Watts, Jon Carlson, 2013-08-21 Psychology has recently shifted toward a phenomenological approach closely aligned with theories originally put forth by noted psychologist Alfred Adler. However, modern approaches are often presented in a language that differs from the original theories, with no acknowledgment to the contributions of Adler. Interventions and Strategies in Counseling and Psychotherapy corrects this oversight, illustrating the many ways in which Adlerian ideas underpin and influence contemporary therapeutic approaches. Original chapters by leading thinkers in the field address the practice of counseling and psychotherapy from a social-cognitive perspective and logically combine classic Adlerian theories with proven and effective methods from other approaches. The book covers a wide range of topics including play therapy, parent education, couples therapy, and problem-solving counseling. This book is essential reading not only for Adlerian psychologists, but also counselors, psychologists, and psychotherapists of any theoretical stripe who wish to keep their practical skills up-to-date. It is also of use to graduate and doctoral students

enrolled in counseling and psychology programs.

beyond therapy brandon ms: Biology-Driven Targeted Therapy of Pediatric Soft-Tissue and Bone Tumors: Current Opportunities and Future Challenges Thomas G. P. Grünewald, Simone Fulda, 2016-04-05 Recent advances in the understanding of the biological basis of pediatric soft-tissue and bone tumors, especially owing to the advent of "omics" technologies, have led to an exponential increase in the current knowledge on the genetic and cellular patho-mechanisms that drive these diseases. This offers the unprecedented opportunity to develop and implement targeted therapies such as monoclonal antibodies, small molecules, oncolytic viruses, and immunotherapies in standard and/or personalized treatment regimens. However, to date only a few examples document a successful translation of discoveries from the bench to the bedside. Recent international expert congresses further emphasize the urgent need for a more rapid and especially more successful translational process. Hence, we strongly believe that a Frontiers Research Topic aiming at this aspect would fit just in time and be relevant for a broad readership. This Frontiers Research Topic intended to provide a platform for active and interdisciplinary discussion, to summarize current state-of-the-art knowledge on all basic research and translational aspects in pediatric soft-tissue and bone tumors, and to offer new perspectives on how to further promote and accelerate the translational process. It comprises high-quality original articles and timely reviews.
