Beyond Boundaries-Reflections of Indian and U.S. Scholars documents experiential learning of exchange scholars from India and the U.S.A. These essays from Fulbright Scholars, Post-Doc Researchers, Humphrey Fellows, and participants of International Visitor Leadership Program (IVLP), and East-West Center, provide a diverse spectrum of their cultural and academic experiences. The personal essays in this collection are interesting, shocking, and unforgettable. Anyone interested in studying in the United States or going to India ought to read this book for it provides a rare perspective that comes from observing a country from the students' point of view. Here, students learn, share and make the connections that go on to the making of a better and safer world for us and for future generations. While these essays do not necessarily present a representative picture either of India or the U.S.A., the sketches do describe exchange experiences of interest to anyone who is concerned with people, cultures and diversity. The production of this book was partially sponsored by the Fulbright Academy of Science & Technology.

beyond boundaries therapy services: Moving Beyond Boundaries in Disability Studies
Michele Moore, 2013-09-13 What challenges are posed by changing transnational trends, agendas and movements that affect disabled people's lives, and what can disabled people, their representative organisations and their governments do to advance the agenda for self-determination and inclusion? This book draws together the writing of academics and activists to depict the experience and perspective of disabled people in relation to a range of contemporary social changes, with a focus firmly on ways in which disabled people and their allies can act to counter disabling policies and practices. Throughout the book there is an emphasis on disabled people's own voices and activism as the critical driver of theoretical critique and practical change. Chapters address a wide range of cultural, institutional and personal arenas to explore and contest the boundaries that disabled people seek to move beyond, from cross-border labour movements in Korea to experience of day services in England, from continuing and long-lasting realities of wars in Lebanon, Cambodia and Somalia to the beauty of harmony in Navajo traditions for understanding disability, from collective activism to individual participation in the Olympics. This book is recommended reading for students, researchers and activists interested in Disability Studies and is directly relevant to policy makers and practitioners in a position to reshape rights, spaces and innovations in response to the priorities disabled people feel and articulate are important for their lives. It was originally published as a special issue of *Disability & Society*.

beyond boundaries therapy services: *Handbook of Working with Children, Trauma, and Resilience* Aida Alayarian, 2018-05-08 This book is a psychoanalytic discussion of the effects of trauma and torture on children, with a specific focus on how professionals can use an approach focused on resiliency rather than vulnerability to help the child reach wellbeing. Aida Alayarian argues that in a world where the torture, maltreatment, and neglect of children shamefully persist, it is incumbent upon all of us to intervene appropriately to put a stop to it. Whether in conference rooms developing a more comprehensive policy to hold perpetrators accountable, or working in clinics where traumatised children and their families seek help, the question of how we act to improve the opportunity for recovery in children and young people subjected to such inhumane treatment should be our primary concern. *Handbook of Working with Children, Trauma, and Resilience* discusses this salient issue, drawing on psychoanalytic perspectives of the effects of trauma on children, and looking specifically at the case of refugee children and families. Understanding challenging behaviour in traumatised children and the effects of refugee experience on families can help all concerned to offer more appropriate and effective support.

The profession is presented as a political possibilities-based practice, concerned with what matters most to people in real life contexts, generating practice-based evidence to complement evidence-based practice. As these writers demonstrate, occupational therapies are far more than, as some critical views have suggested, a monoculture of practice rooted in Western modernity. Nobel Peace Laureate Desmond Tutu captures the ethos of this book, which essentially calls for engagements in the service of a purpose that is larger than the advancement of our profession's interests: Your particular approach to advancing our wellbeing and health strikes me as both unique and easily taken for granted. beyond boundaries therapy services: Health Inequities in Canada Olena Hankivsky, 2011-05-01 There is a growing recognition that existing theories on, and approaches to, health inequities are limited in their ability to capture how these inequities are produced through changing, co-constituted, and intersecting effects of multiple forms of oppression. Intersectionality responds to this problem by considering the interactions and combined impacts of social locations and structural processes on the creation and perpetuation of inequities. It offers unique insights into, and possible solutions to, some of Canada's most pressing health disparities. This volume brings together Canadian activists, community-based researchers, and scholars from a range of disciplines to apply interpretations of intersectionality to health and organizational governance cases. By addressing specific health issues, this book advances methodological applications of intersectionality in health research, policy, and practice. Most importantly, it demonstrates that health inequities cannot be understood or addressed without the interrogation of power and diverse social locations and
