bicycle health phone number: **Resuscitation and Stabilization of the Critically Ill Child**

Derek S. Wheeler, Hector R. Wong, Thomas P. Shanley, 2008-12-17 The care of the critically ill or
 injured child begins with timely, prompt, and aggressive res- citation and stabilization. Ideally,
 stabilization should occur before the onset of organ failure in order to achieve the best possible
 outcomes. In the following pages, an international panel of experts provides an in-depth discussion
 of the early recognition, resuscitation, and stabilization of the critically ill or injured child. Once
 again, we would like to dedicate this textbook to our families and to the physicians and nurses who
 provide steadfast care every day in pediatric intensive care units across the globe. Derek S. Wheeler
 Hector R. Wong Thomas P. Shanley V Preface to Pediatric Critical Care Medicine: Basic Science and
 Clinical Evidence The ? eld of critical care medicine is growing at a tremendous pace, and
 tremendous advances in the understanding of critical illness have been realized in the last decade.
 My family has directly bene? ted from some of the technological and scienti? c advances made in the
 care of critically ill children. My son Ryan was born during my third year of medical school. By some
 peculiar happenstance, I was nearing completion of a 4-week rotation in the newborn intensive care
 unit (NICU). The head of the pediatrics clerkship was kind enough to let me have a few days off
 around the time of the delivery—my wife, Cathy, was 2 weeks past her due date and had been
 scheduled for elective induction.
