bill blank the science guy: Science in the Media Paul R Brewer, Barbara L Ley, 2021-09-30 This timely and accessible text shows how portrayals of science in popular media—including television, movies, and social media—influence public attitudes around messages from the scientific community, affect the kinds of research that receive support, and inform perceptions of who can become a scientist. The book builds on theories of cultivation, priming, framing, and media models while drawing on years of content analyses, national surveys, and experiments. A wide variety of media genres—from Hollywood blockbusters and prime-time television shows to cable news channels and satirical comedy programs, science documentaries and children's cartoons to Facebook posts and YouTube videos—are explored with rigorous social science research and an engaging, accessible style. Case studies on climate change, vaccines, genetically modified foods, evolution, space exploration, and forensic DNA testing are presented alongside reflections on media stereotypes and disparities in terms of gender, race, and other social identities. *Science in the Media* illuminates how scientists and media producers can bridge gaps between the scientific community and the public, foster engagement with science, and promote an inclusive vision of science, while also highlighting how readers themselves can become more active and critical consumers of media messages about science. *Science in the Media* serves as a supplemental text for courses in science communication and media studies, and will be of interest to anyone concerned with publicly engaged science.

These emails, etc. were written to family, friends, and the youth group students I have had the privilege of getting to know and love for the past 25 years. Some of the questions I get are about creation/evolution, the deity of Christ, the end times as well as personal issues such as sexual purity, and how to live a holy life. Part of the book is also about the journey God has brought me through in my personal life. My hope is that however God uses this book, that it pleases and glorifies Him.

bill blank the science guy: NGO Discourses in the Debate on Genetically Modified Crops Ksenia Gerasimova, 2017-07-20 The development and use of genetically modified organisms (GMOs) has been a contentious topic for the last three decades. While there have been a number of social science analyses of the issues, this is the first book to assess the role of Non-Governmental Organizations (NGOs) in the debate at such a wide geographic scale. The various positions, for and against GMOs, particularly with regard to transgenic crops, articulated by NGOs in the debate are dissected, classified and juxtaposed to corresponding campaigns. These are discussed in the context of key conceptual paradigms, including nature fundamentalism and the organic movement, post-colonialism, food sovereignty, anti-globalisation, sustainability and feminism. The book also analyses how NGOs interpret the debate and the persuasive communication tactics they use. This provides greater understanding of the complexity of negotiations in the debate and explains its specific features such as its global scope and difficulty in finding compromises. The author assesses the long-term interests of various participants and changes in perceptions of science and in public communication as a result. Examples of major NGOs such as Greenpeace, Oxfam and WWF are included, but the author also provides new research into the role of NGOs in Russia.

bill blank the science guy: The Most Precious Substance on Earth Shashi Bhat, 2021-08-24 2022 Governor General's Literary Award for Fiction Shortlist A humorous coming-of-age novel-in-stories and a sharp-edged look at how silence can shape a life, from the winner of the Journey Prize. A Chatelaine Summer Reads pick. "But wait, what happened to the girl?" "I don't know," I say. I don't tell him that what will happen to her is what happens to every girl. Bright, hilarious, and sensitive fourteen-year-old Nina doesn't say anything when her best friend begins to pull away, or when her crush on her English teacher intensifies. She doesn't say anything when her mother tries to match her up with local Halifax Indian boys unfamiliar with her Saved by the Bell references, or when her worried father starts reciting Hindu prayers outside her bedroom door. ("How can your dad be happy when his only daughter is unsettled?") And she won't speak of the incident in high school that changes the course of her life. The Most Precious Substance on Earth tells stories of Nina's life from the nineties to present day, when she returns to the classroom as a high school teacher with a haunting secret. And whether she's pushing herself to deliver speeches at Toastmasters meetings, struggling through her MFA program, enduring the indignities of online dating, or wrestling with how to best guide her students, she will discover that the past is never far behind her. Darkly funny, deeply moving, unsettling, and at times even shocking, Shashi Bhat's irresistible novel-in-stories examines the fraught relationships between those who take and those who have something taken. The Most Precious Substance on Earth is a sharp-edged and devastating look at how women are conditioned to hide their trauma and suppress their fear, loneliness, and anger, and an unforgettable portrait of how silence can shape a life.

bill blank the science guy: Climatology versus Pseudoscience Dana Nuccitelli, 2015-03-03 This book explains the science of climate change in plain language and shows that the 2 to 4 percent of climate scientists who are skeptical that humans are the main cause of global warming are a fringe minority—and have a well-established history of being wrong. Although some politicians, pundits, and members of the public do not believe it, global warming predictions by mainstream climate scientists have been remarkably accurate while those made by climate deniers have not. And if mainstream global warming predictions continue to prove correct, the window of opportunity to prevent a climate catastrophe is quickly closing. This book is the first to illustrate the accuracy—and inaccuracy—of global warming predictions made by mainstream climate scientists and by climate

contrarians from the 1970s to the present day. Written in simple, non-technical language that provides an accessible explanation of key climate science concepts, the book will appeal to general audiences without previous knowledge about climate science. Author Dana Nuccitelli, an environmental scientist and risk assessor, discusses some key climate discoveries dating back to the 19th century and debunks myths such as the idea that climate scientists and climate models have grossly over-predicted global warming. He addresses recent findings of a 97-percent consensus in the peer-reviewed scientific literature that humans are causing global warming—a nearly unanimous agreement that formed in the early 1990s and has grown through the present day. Nuccitelli also discusses what the future climate might look like if current trends continue unabated, and what we as a global society need to do to prevent a climate catastrophe.
