big name in public opinion research: Celebrities in American Elections Richard T. Longoria, 2022-09-02 Using a case study approach, *Celebrities in American Elections* contends that celebrities have the talent, fame, and resources to succeed in electoral politics. These factors account for the electoral victories of Ronald Reagan, Clint Eastwood, Fred Grandy, Sonny Bono, Jesse Ventura, Arnold Schwarzenegger, Al Franken, and Donald Trump. However, the author argues that these items are insufficient without a favorable political environment; as many celebrities have lost elections as have won them. They lose because their persona does not match the politics of their time, or they represent the minority party in a one party dominated district or state, or they advocate for unpopular policies. Among those that won, nearly half were elected by a plurality - not a majority - of voters. This does not suggest overwhelming public support for celebrity candidates despite their many advantages. With a few exceptions, celebrities that won tended to also win the fundraising battle, while celebrities that lost tended to raise less than their opponent - the normal laws of politics still apply. The celebrity factor, while helpful, does not fully explain why celebrities

win or lose elections.

big name in public opinion research: *Class War?* Benjamin I. Page, Lawrence R. Jacobs, 2009-08-01 Recent battles in Washington over how to fix America's fiscal failures strengthened the widespread impression that economic issues sharply divide average citizens. Indeed, many commentators split Americans into two opposing groups: uncompromising supporters of unfettered free markets and advocates for government solutions to economic problems. But such dichotomies, Benjamin Page and Lawrence Jacobs contend, ring false. In *Class War?* they present compelling evidence that most Americans favor free enterprise and practical government programs to distribute wealth more equitably. At every income level and in both major political parties, majorities embrace conservative egalitarianism—a philosophy that prizes individualism and self-reliance as well as

public intervention to help Americans pursue these ideals on a level playing field. Drawing on hundreds of opinion studies spanning more than seventy years, including a new comprehensive survey, Page and Jacobs reveal that this worldview translates to broad support for policies aimed at narrowing the gap between rich and poor and creating genuine opportunity for all. They find, for example, that across economic, geographical, and ideological lines, most Americans support higher minimum wages, improved public education, wider access to universal health insurance coverage, and the use of tax dollars to fund these programs. In this surprising and heartening assessment, Page and Jacobs provide our new administration with a popular mandate to combat the economic inequity that plagues our nation.
