crash course us history 38: The Singularity Is Nearer Ray Kurzweil, 2024-06-25 AN INSTANT NEW YORK TIMES BESTSELLER ONE OF TIME'S 100 MOST INFLUENTIAL PEOPLE IN ARTIFICIAL INTELLIGENCE The noted inventor and futurist's successor to his landmark book *The Singularity Is Near* explores how technology will transform the human race in the decades to come. Since it was first published in 2005, Ray Kurzweil's *The Singularity Is Near* and its vision of an exponential future have spawned a worldwide movement. Kurzweil's predictions about technological advancements have largely come true, with concepts like AI, intelligent machines, and biotechnology now widely familiar to the public. In this entirely new book Ray Kurzweil brings a fresh perspective to advances toward the Singularity—assessing his 1999 prediction that AI will reach human level intelligence by 2029 and examining the exponential growth of technology—that, in the near future, will expand human intelligence a millionfold and change human life forever. Among the topics he discusses are rebuilding the world, atom by atom with devices like nanobots; radical life extension beyond the current age limit of 120; reinventing intelligence by connecting our brains to the cloud; how exponential technologies are propelling innovation forward in all industries and improving all aspects of our well-being such as declining poverty and violence; and the growth of renewable energy and 3-D printing. He also considers the potential perils of biotechnology, nanotechnology, and artificial intelligence, including such topics of current controversy as how AI will impact employment and the safety of autonomous cars, and After Life technology, which aims to virtually revive deceased individuals through a combination of their data and DNA. The culmination of six decades of research on artificial intelligence, *The Singularity Is Nearer* is Ray Kurzweil's crowning contribution to the story of this science and the revolution that is to come.

crash course us history 38: Nexus Yuval Noah Harari, 2025-09-16 #1 NEW YORK TIMES BESTSELLER • From the author of *Sapiens* comes the groundbreaking story of how information networks have made, and unmade, our world. “Strikingly original . . . A historian whose arguments operate on the scale of millennia has managed to capture the zeitgeist perfectly.”—The Economist “This deeply important book comes at a critical time as we all think through the implications of AI and automated content production. . . . Masterful and provocative.”—Mustafa Suleyman, author of *The Coming Wave* For the last 100,000 years, we *Sapiens* have accumulated enormous power. But despite all our discoveries, inventions, and conquests, we now find ourselves in an existential crisis. The world is on the verge of ecological collapse. Misinformation abounds. And we are rushing headlong into the age of AI—a new information network that threatens to annihilate us. For all that we have accomplished, why are we so self-destructive? *Nexus* looks through the long lens of human history to consider how the flow of information has shaped us, and our world. Taking us from the Stone Age, through the canonization of the Bible, early modern witch-hunts, Stalinism, Nazism, and the resurgence of populism today, Yuval Noah Harari asks us to consider the complex relationship between information and truth, bureaucracy and mythology, wisdom and power. He explores how different societies and political systems throughout history have wielded information to achieve their goals, for good and ill. And he addresses the urgent choices we face as non-human intelligence threatens our very existence. Information is not the raw material of truth; neither is it a mere weapon. *Nexus* explores the hopeful middle ground between these extremes, and in doing so, rediscovers our shared humanity.

crash course us history 38: *The Canadian Home* Marc Denhez, 1994-09-01 Would you want to live in a factory-molded cube made of plastic, asbestos, and UFFI? With an H-bomb shelter and the nuclear furnace underneath? Or a house designed by God to harmonize with the cosmic Muzak? The *Canadian Home* explains how our housing came to be including the pagan origins of colonial homes, why Tudor is not Tudor, and where so many predictions went wrong. But the book is not just about tastes and floor plans; it also celebrates technological innovation, from prehistoric Inuit windows (of stretched seal guts) to the R-2000 house and habitation in space. For the first time, records of the Canadian Home Builders' Association have been opened to reveal the power plays of bureaucrats, developers, architects, and financiers and how they affect the quality, affordability, and choice of our housing today. Fiery debates over the sublime and the ridiculous (e.g. 1940s architectural articles on whether Toronto should be bombed) are set against the backdrop of Canadian politics and industrial history. Whether the reader's interest is in construction, politics, or home decor, this book explains why the roof over our heads is the way it is. Pierre Berton In his fascinating study of Canadian shelter, Marc Denhez takes us on a 20,000-year journey from the days of the cave, the tipi, and the igloo, to the H-bomb shelter and the mobile home. This is, in short, a lively as well as an erudite study of the development of housing . [It] deserves a permanent position on any library shelf. If you live in a house or own one or build one if you have a roof over your head read this book. A housing book with punch and humour immensely enjoyable. -Charles Lynch author, journalist and former governor of Heritage Canada.

From the Puritan witch trials to the Masons, from the Red Scare to Watergate, Whitewater, and the War on Terror, this encyclopedia covers conspiracy theories across the breadth of U.S. history, examining the individuals, organizations, and ideas behind them. Its over 300 alphabetical entries cover both the documented records of actual conspiracies and the cultural and political significance of specific conspiracy speculations. Neither promoting nor dismissing any theory, the entries move beyond the usual biased rhetoric to provide a clear-sighted, dispassionate look at each conspiracy (real or imagined). Readers will come to understand the political and social contexts in which these theories arose, the mindsets and motivations of the people promoting them, the real impact of society's reactions to conspiracy fears, warranted or not, and the verdict (when verifiable) that

history has passed on each case.

crash course us history 38: A History of the Mediterranean Air War, 1940-1945

Christopher Shores, Giovanni Massimello, Russell Guest, Frank Olynyk, Winfried Bock, 2016-08-05

The third volume in the epic military aviation series focuses on the Allied invasion of North Africa during World War II. This work of WWII history takes us to November 1942 to explain the background of the first major Anglo-American venture: Operation Torch, the invasion of French North Africa. Describing the fratricidal combat that followed the initial landings in Morocco and Algeria, it then considers the unsuccessful efforts to reach northern Tunisia before the Germans and Italians could get there to forestall the possibility of an attack from the west on the rear of the Afrika Korps forces, then beginning their retreat from El Alamein. The six months of hard fighting that followed, as the Allies built up the strength of their joint air forces and gradually wrested control of the skies from the Axis, are recounted in detail. The continuing story of the Western Desert Air Force is told, as it advanced from the east to join hands with the units in the west. Also covered are the arrivals over the front of American pilots and crew, the P-38 Lightning, the Spitfire IX, and the B-17 Flying Fortress—and of the much-feared Focke-Wulf Fw 190. The aerial activities over Tunisia became one of the focal turning points of World War II, yet are frequently overlooked by historians. Here, the air-sea activities, the reconnaissance flights, and the growing day and night bomber offensives are examined in detail.

crash course us history 38: *Gear Up, Mishaps Down* Robert F Dunn, 2017-01-15 Less than five years after naval aviation led the forces that defeated Imperial Japan that very organization was in serious trouble. The force had been drastically reduced and, despite the Korean War, growing sentiment supported by no less than the chairman of the Joint Chiefs argued that the new Air Force could do anything naval aviation might be required to do. Meanwhile, the naval aviation mishap rate soared. The very survival of naval aviation was at stake. It took fifty years to turn this around. Today, in spite of hot wars, cold wars, contingencies, and peacetime operations in support of friends and allies, the Navy and Marine Corps accident rate is at least as good as that of the Air Force, and it approaches that of commercial aviation. *Gear Up, Mishaps Down* explains that this accomplishment was achieved through dedicated and professional leadership, a focus on lessons learned from mishaps and near-mishaps, a willingness to learn from other enterprises, and by better leadership, training, maintenance, supply and more.
