cultural diversity and ethnic minority psychology journal: The Oxford Handbook of Acculturation and Health Seth J. Schwartz, Jennifer Unger, 2017-08-10 The *Oxford Handbook of Acculturation and Health* expertly brings together two very distinct, but complementary, streams of work and thought: theoretical and methodological work on acculturation, and the applied work linking acculturation to various health outcomes among international migrants and their families. In this important volume, the work of landmark acculturation theorists and methodologists come together to showcase applied epidemiologic and intervention work on the issues facing acculturation and public health today. Edited by Seth J. Schwartz and Jennifer B. Unger, this Handbook is divided into two important parts for readers. Part one features chapters that are dedicated to theoretical and methodological work on acculturation, including definitional issues, measurement issues, and procedures for studying acculturation across immigrant groups and national contexts. The second part focuses on the links between acculturation and various health outcomes, such as obesity, physical activity, drug and alcohol abuse, mental health, delinquency, and suicide. Notably, because a majority of the research on acculturation and health has been conducted on Hispanic immigration, this volume contextualizes that research and offers readers compelling insight for how to apply these principles to other immigrant groups in the United States and around the world.

cultural diversity and ethnic minority psychology journal: Prejudice, Stigma, Privilege, and Oppression Lorraine T. Benuto, Melanie P. Duckworth, Akihiko Masuda, William O'Donohue, 2020-05-11 This book addresses the ways in which clinical psychologists ought to conceptualize and respond to the prejudice and oppression that their clients experience. Thus, the link between prejudice and oppression to psychopathology is explored. Basic scientific information about prejudice is reviewed, and the current status of the major minority groups is explored. Chapters examine the role of prejudice and oppression in institutional structures such as the Diagnostic and Statistical Manual of Mental Disorders and professional organizations. The discussion addresses ways to assess these phenomena in individual cases and how to intervene in psychotherapy. The book ventures to evaluate the status of the profession of psychology with respect to prejudice, stigmatization, and oppression by critically examining evidence that the profession has responded adequately to these social problems. These issues are hard to talk about and are not well talked about in the field. This book is a push in the right direction.

cultural diversity and ethnic minority psychology journal: The Oxford Handbook of Counseling Psychology Elizabeth M. Altmaier, Jo-Ida C. Hansen, 2011-11-25 Counseling Psychology, one of the original specialties recognized in the profession of psychology, centers on and promotes clients' personal strengths during times of developmental transition or personal challenge and crisis. This tradition has led the discipline to excellence in areas such as improving vocational decision making and understanding client response during counseling. More recently, this tradition has been applied in new and exciting areas, such as understanding the role of multicultural factors among persons and society, responding to crises in life such as health threats and disasters, and enhancement of social justice in systems and communities. The Oxford Handbook of Counseling Psychology comprises chapters, all written by expert contributors, in four sections: foundations of the specialty; contextual variables such as ethnicity and social class; applications across individual, couple, family and group populations; and intersections of the specialty with new targets of client or context. Each chapter reviews the history of research, theory and application; analyzes current directions, and sets an agenda for the close future, again in theory, research and application. The handbook is a comprehensive and well written survey of many of psychology's domains of growing interest to students, professionals, and the public.

cultural diversity and ethnic minority psychology journal: Handbook of Asian American

Health Grace J. Yoo, Mai-Nhung Le, Alan Y. Oda, 2012-10-12 Asian Americans encounter a range of health issues often unknown to the American public, policy makers, researchers and even clinicians. National research often combines Asian Americans into a single category, not taking into account the differences and complexity among Asian ethnic subgroups. The definition of Asian American derives from the U.S. Census Bureau's definition of Asian, which includes peoples from all the vast territories of the Far East, Southeast Asia and the South Asian Subcontinent. While Census classifications determine demographic measurements that affect equal opportunity programs, the broad rubric "Asian-American" can never describe accurately the more than 50 distinct Asian American subgroups, who together comprise multifaceted diversity across cultural ethnicities, socio-economic status, languages, religions and generations. This volume rectifies that situation by exploring the unique needs and health concerns of particular subgroups within the Asian American community. It consolidates a wide range of knowledge on various health issues impacting Asian Americans while also providing a discussion into the cultural, social, and structural forces impacting morbidity, mortality and quality of life. The volume is designed to advance the understanding of Asian American health by explaining key challenges and identifying emerging trends faced in specific ethnic groups and diseases/illnesses, innovative community-based interventions and the future needed areas of research.

cultural diversity and ethnic minority psychology journal: Teaching Diversity Relationally Grace S. Kim, Roxanne A. Donovan, Karen L. Suyemoto, 2022-06-27 Teaching Diversity Relationally: Engaging Emotions and Embracing Possibilities offers process-oriented guidance for negotiating the psychological and relational challenges inherent in teaching about race, privilege, and oppression. Grounded in the philosophy of Transformative Education and incorporating psychological theories, the authors present concrete strategies for effectively teaching diversity and social justice courses. The authors develop an intersectional social justice framework for Transformative Education that emphasizes five emotional-relational pillars of successful teaching for diversity: cultivating reflexivity and exploration of positionality; engaging emotions; fostering perspective taking and empathy; promoting community and relational learning; and encouraging agency and responsibility. They provide guidance on how to prepare for social justice education that fosters the growth of learners and educators by addressing intersecting levels of engagement—intrapsychic (within individual students and educators), relational (between students, between faculty and students), and group dynamic. Teaching Diversity Relationally follows the developmental arc of a diversity course across a semester, exploring how students respond as the course moves into deeper content material and more intense discussions. The authors describe the psychology behind these responses, and offer best practices for different points in the semester to facilitate learning, manage class dynamics, build connections among students, and prevent faculty burnout. Teaching Diversity Relationally addresses the teaching process in diversity courses. The authors' companion text, *Unraveling Assumptions: A Primer for Understanding Oppression and Privilege* provides the foundational content for university courses that can be expanded upon with a range of disciplines. *Unraveling Assumptions* offers an introductory exploration of power, privilege, and oppression as foundations of systems of inequality and examines complexities within meanings and lived experiences of race, ethnicity, gender, sexuality, disability, and social class.

cultural diversity and ethnic minority psychology journal: The Oxford Handbook of Multicultural Identity Veronica Benet-Martinez, Ying-Yi Hong, 2015-08-01 Multiculturalism is a prevalent worldwide societal phenomenon. Aspects of our modern life, such as migration, economic globalization, multicultural policies, and cross-border travel and communication have made intercultural contacts inevitable. High numbers of multicultural individuals (23-43% of the population by some estimates) can be found in many nations where migration has been strong (e.g., Australia, U.S., Western Europe, Singapore) or where there is a history of colonization (e.g., Hong Kong). Many multicultural individuals are also ethnic and cultural minorities who are descendants of immigrants, majority individuals with extensive multicultural experiences, or people with culturally mixed families; all people for whom identification and/or involvement with multiple cultures is the norm. Despite the prevalence of multicultural identity and experiences, until the publication of this volume, there has not yet been a comprehensive review of scholarly research on the psychological underpinning of multiculturalism. The Oxford Handbook of Multicultural Identity fills this void. It reviews cutting-edge empirical and theoretical work on the psychology of multicultural identities and experiences. As a whole, the volume addresses some important basic issues, such as measurement of multicultural identity, links between multilingualism and multiculturalism, the social psychology of multiculturalism and globalization, as well as applied issues such as multiculturalism in counseling, education, policy, marketing and organizational science, to mention a few. This handbook will be useful for students, researchers, and teachers in cultural, social, personality, developmental, acculturation, and ethnic psychology. It can also be used as a source book in advanced undergraduate and graduate courses on identity and multiculturalism, and a reference for applied psychologists and researchers in the domains of education, management, and marketing.
