The installation process is designed to be straightforward, but adherence to the manual's guidelines ensures compliance with safety standards and optimal performance.

Mounting the Brake Control

The first step in installation involves selecting an appropriate mounting location within the driver's reach, typically under the dashboard. The manual advises avoiding areas exposed to excessive heat, moisture, or vibration. Using the included bracket and hardware, the unit should be securely fastened to prevent movement during towing. The mounting instructions emphasize orientation to allow clear visibility of the LED display and easy access to control buttons.

Electrical Connection Guidelines

The Curt TriFlex requires connection to the vehicle's electrical system, including power, ground, brake signal, and output to the trailer brakes. The manual details the color-coded wiring harness and the necessary tools for installation. It also stresses the importance of using the correct gauge wire and securing all connections to prevent shorts or disconnections. For vehicles without a factory-installed brake controller connector, the manual provides alternative wiring instructions to integrate the unit safely.

Programming and Operation

The Curt TriFlex brake control manual guides users through programming the unit to suit their towing needs. Programming involves setting the gain, adjusting the braking force, and selecting operational modes. Familiarity with these settings ensures a customized braking experience that enhances safety and comfort during towing.

Adjusting Gain Settings

Gain adjustment controls the amount of braking force applied to the trailer brakes relative to the tow vehicle's braking. The manual explains how to use the control buttons to increase or decrease gain and provides recommended starting points based on trailer weight. Proper gain settings prevent trailer sway and premature brake wear while maintaining smooth deceleration.

Operating Modes

The TriFlex brake control offers different modes, including proportional and user-controlled braking. The proportional mode automatically adjusts braking force according to vehicle deceleration, while manual mode allows the driver to apply trailer brakes independently via a slide control. The manual clearly explains when and how to use each mode, ensuring adaptability to various driving conditions.

Wiring and Electrical Connections

Reliable wiring is fundamental to the performance of the Curt TriFlex brake control. The manual provides detailed wiring diagrams and specifications to assist with proper installation and troubleshooting.
