culture topics for speech: *Advances in Culturally-Aware Intelligent Systems and in Cross-Cultural Psychological Studies* Colette Faucher, 2017-11-03 This book offers valuable new insights into the design of culturally-aware systems. In its first part, it is devoted to presenting selected Culturally-Aware Intelligent Systems devised in the field of Artificial Intelligence and its second part consists of two sub-parts that offer a source of inspiration for building modelizations of Culture and of its influence on the human mind and behavior, to be used in new Culturally-Aware Intelligent Systems. Those sub-parts present the results of experiments conducted in two fields that study Culture and its influence on the human mind's functions: Cultural Neuroscience and Cross-Cultural Psychology. In this era of globalization, people from different countries and cultures have the opportunity to interact directly or indirectly in a wide variety of contexts. Despite

differences in their ways of thinking and reasoning, their behaviors, their values, lifestyles, customs and habits, languages, religions – in a word, their cultures – they must be able to collaborate on projects, to understand each other's views, to communicate in such a way that they don't offend each other, to anticipate the effects of their actions on others, and so on. As such, it is of primary importance to understand how culture affects people's mental activities, such as perception, interpretation, reasoning, emotion and behavior, in order to anticipate possible misunderstandings due to differences in handling the same situation, and to try and resolve them. Artificial Intelligence, and more specifically, the field of Intelligent Systems design, aims at building systems that mimic the behavior of human beings in order to complete tasks more efficiently than humans could by themselves. Consequently, in the last decade, experts and scholars in the field of Intelligent Systems have been increasingly tackling the notion of cultural awareness. A Culturally-Aware Intelligent System can be defined as a system where Culture-related or, more generally, socio-cultural information is modeled and used to design the human-machine interface, or to provide support with the task carried out by the system, be it reasoning, simulation or any other task involving cultural knowledge.

culture topics for speech: *Therapeutic Processes for Communication Disorders* Robert J. Fourie, 2010-11-25 Why do many people with disorders of communication experience a sense of demoralization? How can professionals dealing with speech, language, hearing and other communication disorders analyse and respond to the subjective and relational needs of clients with such problems? In this book, authors in the fields of communication disorders analyse the psychological, social and linguistic processes and interactions that underpin clinical practice, from both client and clinician perspectives. The chapters demonstrate how it is possible to analyze and understand client-clinician discourse using qualitative research, and describe various challenges to establishing relationships such as cultural, gender and age differences. The authors go on to describe self-care processes, the therapeutic use of the self, and various psychological factors that could be important for developing therapeutic relationships. Also covered are the rarely considered topics of spirituality and

transpersonal issues, which may at times be relevant to clinicians working with clients who have debilitating, degenerative and terminal illnesses associated with certain communication disorders. culture topics for speech: Handbook of Communication in the Public Sphere Ruth Wodak, Veronika Koller, 2008-08-27 As you are reading this, you are finding yourself in the ubiquitous public sphere that is the Web. Ubiquitous, and yet not universally accessible. This volume addresses this dilemma of the public sphere, which is by definition open to everyone but in practice often excludes particular groups of people in particular societies at particular points in time. The guiding questions for this collection of articles are therefore: Who has access to the public sphere? How is this access enabled or disabled? Under what conditions is it granted or withheld, and by whom? We regard the public sphere as the nodal point for the discourses of business, politics and media, and this basic assumption is also reflected in the structure of the volume. Each of these three macro-topics comprises chapters by international scholars from a variety of disciplines and research traditions who each combine up-to-date overviews of the relevant literature with their own cutting-edge research into aspects of different public spheres such as corporate promotional communication, political rhetoric or genre features of electronic mass media. The broad scope of the volume is perhaps best reflected in a comprehensive discussion of communication technologies ranging from conventional spoken and written formats such as company brochures, political speeches and TV shows to emerging ones like customer chat forums, political blogs and text messaging. Due to the books' wide scope, its interdisciplinary approach and its clear structure, we are sure that whether you work in communication and media studies, linguistics, political science, sociology or marketing, you will find this handbook an invaluable guide offering state-of-the-art literature reviews and exciting new research in your field and adjacent areas.

The study focuses on five features of conversational interaction — disagreements, compliments and compliment responses, simultaneous talk, discourse topic management and discourse information structure — where cultural values and attitudes are particularly evident. For each of the features, hypotheses are formulated and tested through the detailed analysis of twenty-five intercultural conversations. This quantitative analysis is then followed by qualitative analysis of excerpts from the conversations to show the ways in which conversational interaction is performed and negotiated. The study shows in very revealing ways that intercultural conversations involve a complex, interactive and collaborative process of communication between the participants.
