fordham university economics department: Hands-on Intermediate Econometrics Using R Hrishikesh D. Vinod, 2008 This book explains how to use R software to teach econometrics by providing interesting examples, using actual data applied to important policy issues. It helps readers choose the best method from a wide array of tools and packages available. The data used in the examples along with R program snippets, illustrate the economic theory and sophisticated statistical methods extending the usual regression. The R program snippets are not merely given as black boxes, but include detailed comments which help the reader better understand the software steps and use them as templates for possible extension and modification.

fordham university economics department: Hands-on Intermediate Econometrics Using R: Templates For Learning Quantitative Methods And R Software (Second Edition) Hrishikesh D Vinod, 2022-04-08 How to learn both applied statistics (econometrics) and free, open-source software R? This book allows students to have a sense of accomplishment by copying and pasting many hands-on templates provided here. The textbook is essential for anyone wishing to have a practical understanding of an extensive range of topics in Econometrics. No other text provides software snippets to learn so many new statistical tools with hands-on examples. The explicit knowledge of inputs and outputs of each new method allows the student to know which algorithm is worth studying. The book offers sufficient theoretical and algorithmic details about a vast range of statistical techniques. The second edition's preface lists the following topics generally absent in other textbooks. (i) Iteratively reweighted least squares, (ii) Pillar charts to represent 3D data. (iii) Stochastic frontier analysis (SFA) (iv) model selection with Mallows' Cp criterion. (v) Hodrick-Prescott (HP) filter. (vi) Automatic ARIMA models. (vi) Nonlinear Granger-causality using kernel regressions and bootstrap confidence intervals. (vii) new Keynesian Phillips curve (NKPC). (viii) Market-neutral pairs trading using two cointegrated stocks. (ix) Artificial neural network (ANN) for product-specific forecasting. (x) Vector AR and VARMA models. (xi) New tools for diagnosing the endogeneity problem. (xii) The elegant set-up of k-class estimators and identification. (xiii) Probit-logit models and Heckman selection bias correction. (xiv) Receiver operating characteristic (ROC) curves and areas under them. (xv) Confusion matrix. (xvi) Quantile regression (xvii) Elastic net estimator. (xviii) generalized Correlations (xix) maximum entropy bootstrap for time series. (xx) Convergence concepts quantified. fordham university economics department: *Highways to Success or Byways to Waste*
Rubaba Ali, A. Federico Barra, Claudia Berg, Richard Damania, John Nash, Jason Russ, 2015-09-30
Roads are the arteries through which the economy pulses. They connect sellers to markets, workers to jobs, students to education, and the sick to hospitals. Yet much of the developing world, Africa in particular, lacks adequate transportation infrastructure. Accordingly investments in transportation remain a cornerstone of the development agenda. Sub-Saharan Africa spends roughly \$6.8 billion per year on paving roads, and the World Bank invests more on roads than on education, health, and social services combined. Despite the development focus on transportation, methodologies for evaluating which road projects to fund are often dis-jointed and unreliable. This report hopes to improve upon the current approaches by establishing a new methodology for prioritization which can be applied to a diverse set of scenarios, regions, and projects. This book demonstrates how modern econometrics and geospatial techniques can be combined to analyze the latest available geo-referenced datasets at the smallest possible scale to answer some of the most important questions in development. Uniquely this report attempts to shed light on some of the most profound puzzles in determining the impacts of roads and where to locate these. Does road infrastructure unleash a virtuous growth cycle? Is it advisable to improve roads in conflict prone zones? What is the effect of improving market access on farming practices? And what are the impacts of roads on forests and biodiversity? It is envisioned that the approach used in this book can be a reference guide to researchers from across the spectrum of international development, who are seeking new tools and insights into the many issues (technical and non-technical) of this important field.
