fordham university psychology department: *Advances in Social Science Research Using R* Hrishikesh D. Vinod, 2009-12-24 Quantitative social science research has been expanding due to the availability of computers and data over the past few decades. Yet the textbooks and supplements for researchers do not adequately highlight the revolution created by the R software [2] and graphics system. R is fast becoming the lingua franca of quantitative research with some 2000 free specialized packages, where the latest versions can be downloaded in seconds. Many packages such as “car” [1] developed by social scientists are popular among all scientists. An early 2009 article [3] in the New York Times notes that statisticians, engineers and scientists without computer programming skills find R “easy to use.” A common language R can readily promote deeper mutual respect and understanding of unique problems facing quantitative work in various social sciences. Often the solutions developed in one field can be extended and used in many fields. This book promotes just such exchange of ideas across many social sciences. Since Springer has played a leadership role in promoting R, we are fortunate to have Springer publish this book. A Conference on Quantitative Social Science Research Using R was held in New York City at the Lincoln Center campus of Fordham University, June 18-19, 2009. This book contains selected papers presented at the conference, representing the “Proceedings” of the conference.

fordham university psychology department: *Encyclopedia of Adolescence* Roger J.R. Levesque, 2011-09-05 The *Encyclopedia of Adolescence* breaks new ground as an important central resource for the study of adolescence. Comprehensive in breath and textbook in depth, the *Encyclopedia of Adolescence* - with entries presented in easy-to-access A to Z format - serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer’s print and online flexibility, the *Encyclopedia* is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the *Encyclopedia* draws from four major areas of research relating to adolescence. The first broad area includes research relating to Self, Identity and Development in Adolescence. This area covers research relating to identity, from early adolescence through emerging adulthood; basic aspects of development (e.g., biological, cognitive, social); and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on Adolescents’ Social and Personal Relationships. This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual and romantic as well as significant nonparental adults. The third area examines Adolescents in Social Institutions. This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions

include schools, religious groups, justice systems, medical fields, cultural contexts, media, legal systems, economic structures, and youth organizations. Adolescent Mental Health constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health, from psychopathology to thriving. Major topic examples include deviance, violence, crime, pathology (DSM), normalcy, risk, victimization, disabilities, flow, and positive youth development.

fordham university psychology department: Child Development at the Intersection of Race and SES , 2019-07-10 Child Development at the intersection of Race and SES, Volume 57 in the Advances in Child Development and Behavior series, presents theoretical and empirical scholarship illuminating how race/ethnicity and socioeconomic status intersect to shape children's development and developmental contexts. Important chapters in this new release include the Implications of Intersecting Socioeconomic and Racial Identities for Academic Achievement and Well-being, The home environment of low-income Latino children: Challenges and opportunities, Profiles of race/ethnicity and socioeconomic status: Implications for ethnic/racial identity, discrimination and sleep, Youths' sociopolitical perceptions and mental health: Intersections between race, class, and gender, and much more. Rather than focusing on the additive effects of race/ethnicity and SES, which is typical (and a limitation) in the developmental literature, the scholarship in this book considers how the factors and processes shaping the development of children of color can differ markedly across the socioeconomic continuum. This collection illustrates how applying an intersectional lens to developmental science can yield unique insights into the challenges confronting, and assets buoying, both minority and majority children's healthy development. - Includes contributions from renowned developmental scholars working at the forefront of their fields - Presents a multidisciplinary focus that will be useful to developmental psychologists, sociologists, family scientists and those whose interests and work fall under the purview of those disciplines - Examines multiple dimensions and factors shaping childhood development
