Perry, Stephen Seligman, Ed Tronick, 2014-10-03 Infant and Early Childhood Mental Health: Core Concepts and Clinical Practice is a groundbreaking book that provides an overview of the field from both theoretical and clinical viewpoints. The editors and chapter authors -- some of the field's foremost researchers and teachers -- describe from their diverse perspectives key concepts fundamental to infant-parent and early childhood mental health work. The complexity of this emerging field demands an interdisciplinary approach, and the book provides a clear, comprehensive, and coherent text with an abundance of clinical applications to increase understanding and help the reader to integrate the concepts into clinical practice. Offering both cutting-edge coverage and a format that facilitates learning, the book boasts the following features and content: A focus on helping working professionals expand their specialization skills and knowledge and on offering core competency training for those entering the field, which reflects the Infant-Parent Mental Health Postgraduate Certificate Program (IPMHPCP) and Fellowship in Napa, CA that was the genesis of the book. Chapters written by a diverse group of authors with vastly different training, expertise, and clinical experience, underscoring the book's interdisciplinary approach. In addition, terms such as clinician, therapist, provider, professional, and teacher are intentionally used interchangeably to describe and unify the field. Explication and analysis of a variety of therapeutic models, including Perry's Neurosequential Model of Therapeutics; Brazelton's neurodevelopmental and relational Touchpoints; attachment theory; the Neurorelational Framework; Mindsight; and Downing's Video Intervention Therapy. An entire chapter devoted to diagnostic schemas for children ages 0--5, which highlights the Diagnostic Classification of Mental Health Disorders of Infancy and Early Childhood: Revised (DC:0-3R). With the release of DSM-5, this chapter provides a prototypical crosswalk between DC:0-3R and ICD codes. A discussion of the difference between evidence-based treatments and evidence-based practices in the field, along with valuable information on randomized controlled trials, a research standard that, while often not feasible or ethically permissible in infant mental health work, remains a standard applied to the field. Key points and references at the end of each chapter, and generous use of figures, tables, and other resources to enhance learning. The volume editors and authors are passionate about the pressing need for further research and the acquisition and application of new knowledge to support the health and well-being of individuals, families, and communities. Infant and Early Childhood Mental Health: Core Concepts and Clinical Practice should find a receptive audience for this critically important message.

free online training for mental health professionals: *The Mental Health and Substance Use Workforce for Older Adults* Institute of Medicine, Board on Health Care Services, Committee on the Mental Health Workforce for Geriatric Populations, 2012-10-26 At least 5.6 million to 8 million-nearly one in five-older adults in America have one or more mental health and substance use conditions, which present unique challenges for their care. With the number of adults age 65 and older projected to soar from 40.3 million in 2010 to 72.1 million by 2030, the aging of America holds profound consequences for the nation. For decades, policymakers have been warned that the nation's health care workforce is ill-equipped to care for a rapidly growing and increasingly diverse population. In the specific disciplines of mental health and substance use, there have been similar warnings about serious workforce shortages, insufficient workforce diversity, and lack of basic competence and core knowledge in key areas. Following its 2008 report highlighting the urgency of expanding and strengthening the geriatric health care workforce, the IOM was asked by the Department of Health and Human Services to undertake a complementary study on the geriatric mental health and substance use workforce. *The Mental Health and Substance Use Workforce for Older Adults: In Whose Hands?* assesses the needs of this population and the workforce that serves it. The breadth and magnitude of inadequate workforce training and personnel shortages have grown to such proportions, says the committee, that no single approach, nor a few isolated changes in disparate federal agencies or programs, can adequately address the issue. Overcoming these challenges will require focused and coordinated action by all.

Now newer concepts, such as shared decision-making, the recovery approach, evidence-based practice, implementation science, telemedicine, and mobile device technology, are adding layers of texture to this domain. These developments require an ever more sophisticated understanding of the very latest evidence and experience in community mental health care to respond to the values, goals, needs and preferences of people with lived experience of mental health conditions. This second edition of the *Oxford Textbook of Community Mental Health* addresses recent changes and achievements, current controversies, and future challenges while emphasizing areas of convergence, where social values, health, medical sciences, and policy

formation converge and meet. This edition also features a new section on global mental health, to emphasise what is known about the mental health gap in low- and middle-income countries, and the evidence of how to respond to these huge global challenges. Like community mental health care itself, the authors are multidisciplinary, international, and bring both clinical and scientific perspectives to this volume. This textbook will be an invaluable and authoritative source of reference for all mental health specialists; for people with mental health conditions, for staff in non-governmental and governmental organisations, and indeed for all who are dedicated to creating better mental health services and systems.
