free structural engineering software: Free Form Technology from Delft M. Eekhout, 2016-03-10 The success of the Guggenheim Museum in Bilbao, designed and engineered by Frank O. Gehry and inaugurated in 1997, opened the eyes of the world to the plastic possibilities of Free Form Design. That is, on the side of architects and their admiring clients. Some architects draw up complicated but surprising and attractive Free Form Designs and win design competitions. The next step is to involve the manufacturing industry and the contractors in realizing these dreams. According to the author(s), the desire and logic for an adapted Free Form Technology will become became apparent after more designs. At Mick Eekhout's design & build company Octatube the first experiences with Free Form Designs either failed, were aborted, were a disaster or led to unfortunate events such as the bankruptcy of competing firms who took on the projects without major Free Form Design experience. But Free Form design has matured nowadays. Many lessons can be learned from these early experiments, which is the main reason to share these experiences with readers of this book.

free structural engineering software: Sustainable Structural Engineering John E. Anderson,

Christian Bucher, Bruno Briseghella, Xin Ruan, Tobia Zordan, 2015-01-10 Sustainability is the defining challenge for engineers in the twenty-first century. In addition to safe, economic, and efficient structures, a new criterion, sustainable, must be met. Furthermore, this new design paradigm—addressing social, economic, and environmental aspects—requires prompt action. In particular, mitigation of climate change requires sustainable solutions for new as well as existing structures. Taking from both practice and research, this book provides engineers with applicable, timely, and innovative information on the state-of-the-art in sustainable structural design. This Structural Engineering Document addresses safety and regulations, integration concepts, and a sustainable approach to structural design. Life-cycle assessment is presented as a critical tool to quantify design options, and the importance of existing structures—in particular cultural heritage structures—is critically reviewed. Consideration is also given to bridge design and maintenance, structural reassessment, and disaster risk reduction. Finally, the importance of environmentally friendly concrete is examined. Consequently, structural engineers are shown to have the technical proficiency, as well as ethical imperative, to lead in designing a sustainable future.

free structural engineering software: *Structural Engineering, Mechanics and Computation* A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering, Mechanics and Computation, held in Cape Town in April 2001, this book contains the Proceedings, in two volumes. There are over 170 papers written by Authors from around 40 countries worldwide. The contributions include 6 Keynote Papers and 12 Special Invited Papers. In line with the aims of the SEMC 2001 International Conference, and as may be seen from the List of Contents, the papers cover a wide range of topics under a variety of themes. There is a healthy balance between papers of a theoretical nature, concerned with various aspects of structural mechanics and computational issues, and those of a more practical nature, addressing issues of design, safety and construction. As the contributions in these Proceedings show, new and more efficient methods of structural analysis and numerical computation are being explored all the time, while exciting structural materials such as glass have recently come onto the scene. Research interest in the repair and rehabilitation of existing infrastructure continues to grow, particularly in Europe and North America, while the challenges to protect human life and property against the effects of fire, earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings, bridges and other engineering structures.

I must thank again the authors who submitted the large numbers of papers which made selection a difficult task. The theme of the conference is the use and application of computers in engineering. Many abbreviations have been invented to describe the use of computers from CAD, CAM, CADMAT etc. but the term which best describes the scope of the conference is Computer Aided Engineering, CAE. The papers have been split into sections covering different application areas such as Mechanical Engineering, Civil Engineering. Other sections cover techniques such as Finite Elements, Boundary Elements and General Simulation. An important session at the conference was the new field of engineering databases and as in past conferences the special sessions were devoted to microcomputers. R.A.
