free transportation market research reports: The Air Transport Industry in Africa

William Kiema, 2025-11-05 This book provides legal analysis of the multilateral liberalisation of the air transport industry in Africa within the framework of the African Union Agenda 2063 initiative, the Single African Air Transport Market (SAATM). Offering a detailed examination of the regulatory framework and policy considerations that have shaped the political economy of air transport in Africa, the book offers a comparative analysis with the European Union (EU) and the Association of Southeast Asian Nations (ASEAN). By highlighting the need for a tailored approach to air transport liberalisation in Africa, it underscores the importance of considering the continent's unique socio-political context, diverse values, identities, circumstances, and challenges arising from its vast and varied landscape. The book proposes a principled approach to the implementation of the SAATM initiatives and calls on stakeholders to consider holistic implementation that favours the principle of variable geometry, stakeholder engagement, and alignment with Agenda 2063. It also emphasises the significance of supporting aviation policies such as safety, security, financing, competition, and environmental sustainability. The Air Transport Industry in Africa will be of interest to researchers in the fields of aviation law, economic law, and regional integration in Africa.

free transportation market research reports: The Economic Effects of Air Transport Market Liberalisation Eyden Samunderu, 2024-09-19 This book rigorously examines the air transport market liberalisation process on the African continent and presents key highlights, challenges, and impediments to embracing an “open skies” market environment in Africa. It focuses on the economic impact of air transport liberalisation, policy constraints, challenges of harmonisation, and regional economic integration and its impact on air transport development, employing a quantitative assessment based on the Air Transport Liberalisation Index (ALI) to evaluate how an open skies policy would change the competitive dynamics of air transport in Africa. Adopting a two-tier gravity model, the book explores how demand and route networks would be impacted by the deregulation of the air transport market. The book also applies a historical perspective by evaluating the initial ratification of the Yamoussoukro Declaration (1999), which acted as a catalyst for Africa’s 2063 regional agenda, focused on establishing the Single African Air Transport Market (SAATM). The book also provides a comprehensive analysis of the African Continental Free Trade Area (AfCFTA), exploring its multifaceted impacts on Africa’s single market from economic, regulatory, and sustainability perspectives. This includes an introduction to the AfCFTA, highlighting its inception as a major step towards continental economic integration aimed at enhancing intra-African trade, promoting sustainable development, and fostering industrial diversification. It then examines the capacity and competency building of African aviation personnel. Training gaps and skills are extensively evaluated to ensure that the African region is prepared for the “new” competitive equilibrium post SAATM. The book also raises critical questions regarding the status of the African air transport market. Firstly, with the introduction of an open skies policy in Africa, will the national flag carriers be able to compete under the new market dynamics? Will the SAATM become a game changer in paving the way for the privatisation of some of Africa’s poor-performing airlines? Will the SAATM create a competitive market and a shift in airfares? How will policymakers deal with the excessive aviation taxes, fees and charges that make airfares in Africa the highest in the world? What will the economic benefits be for signatory states that embrace the SAATM? Will there be a significant growth trajectory in terms of air travel demand? This book is intended for researchers studying air transport economics in developing markets, graduate students with a primary focus on air transport development, senior policymakers and professionals at governmental agencies, and

industry practitioners who want to expand their understanding of the dynamics shaping Africa's air transport landscape.
