frontiers of science columbia: Exploring Academic Ethics Steven M. Cahn, 2024-11-27
Academic ethics is the study of moral problems arising in higher education. These may concern the

responsibilities of professors or the institutional policies of colleges and universities. In this work, Steven M. Cahn, a pioneer in the field, brings together his essays concerning four provocative issues: curricular controversies, tenure processes, affirmative action, and pedagogic obligations. Written with his characteristic clarity and imaginative examples, Cahn vividly demonstrates how academic life is replete with practices that raise moral concerns.

frontiers of science columbia: Interior Frontiers Ann Laura Stoler, 2022 In this book, Ann Laura Stoler navigates the shadows and shatterzones of democratic policies, considering how imperial features are folded through (il)liberal orders, where racial inequities thicken in the borderlands of interior frontiers. Sometimes those frontiers, or the lines that define the contours of belonging and not belonging, are porous--often fixed and firm. For those on the wrong side of the fabulated division between inside and out, entry requirements can be opaque, neither verbal nor visible. Illegibilities are secured in code. The sites of inequity are disparate, the sensibilities that produce and sustain those inequities are as well. Borrowing Ralph Ellison's phrase, Stoler exposes unexpected sites and scenes that register the lower frequencies of denigration. Seemingly benign sites are laid bare as toxic, as in her essay eviscerating the warped criteria assigned to taste and who can have it, and in her study of the seared lives that longing, envy, and humiliation inscribe. In so doing, she hews close to the soft violences of sentiments that ascribe, distribute, and assess human kinds. But the project of these essays turns as much to those who reject those violences, who distil refusal in poetic rage--the phrase Stoler invokes to describe the anti-colonial avant-garde. Stoler casts this aesthetic of dissent through a surge of multi-media archiving ventures among Palestinians bent on creating and conjuring landscapes beyond Israeli violences--for the future and today. Stoler hugs close to the dark corridors where racial inequalities thrive. These inequities may be blatant but unnoticed, others are neither muted nor unseen. Each essay iterates a (sub)metric of inequality as a fictive measure of human worth. With an optic, ever bold and subtle, she turns the reader to the social ecologies and racial logics targeting the body and the senses. These are hazardous zones for the instruments and infrastructures in which (il)liberalisms invest. Increasingly unsettled and challenged by a more radically just demos, these sites of contest may be the emergent political scenes of racial sovereignty's unmaking and where the weapons of that unmaking are readied, and stored.

frontiers of science columbia: Realizing General Education: Reconsidering Conceptions and Renewing Practice Cynthia A. Wells, 2016-01-11 General education is widely touted as an enduring distinctive of higher education, but what do we actually mean by general education? Differing perspectives not only make it challenging to consider its significance, but also open it up to a wide range of determinations regarding its effectiveness. This volume aims to sharpen understanding of the complex picture of general education by: describing how various conceptions of general education evolved historically, identifying various functions expected of general education in the contemporary context, and pointing out the educational practices that fulfill general education's aims in the current context. The conceptions of, and aspirations for, general education are consequential. This volume disentangles the divergent conceptions that hinder its renewal and considers the range of avenues for realizing its effectiveness. This is the second issue of the 42nd volume of the Jossey-Bass series ASHE Higher Education Report. Each monograph is the definitive

analysis of a tough higher education issue, based on thorough research of pertinent literature and institutional experiences. Topics are identified by a national survey. Noted practitioners and scholars are then commissioned to write the reports, with experts providing critical reviews of each manuscript before publication.

frontiers of science columbia: Slacking Adam Kissel, Rachel Alexander Cambre, Madison Marino Doan, 2025-05-06 *Prestige no longer ensures substance at Ivy League schools; students must navigate a maze of shallow, politicized courses to uncover the rare gems of a classical education, exposing the need for academic renewal. This book is a banquet of the absurdities that Ivy League universities serve up to their students under the rubric of general education. Anyone who wonders how the graduates of America's elite institutions come by their jaundiced view of our country should start here. The few who refuse to "slack" are limited to the hard sciences and the few remaining excellent courses in the humanities. —Peter Wood, President, National Association of Scholars* Ivy League universities can no longer be trusted to produce well-educated students. Even a cursory review of the course titles at top schools shows that these \$320,000-plus diplomas may confer legacy

prestige to graduates, but not necessarily knowledge or wisdom. At Cornell, for example, students can take Queer Girlhood, Beyoncé Nation, and Intersectional Disability Studies. The course list at Yale includes Pop Sapphism and Comparative Settler Geographies. At Princeton: Shoes. Penn offers Reality TV and Gender and Decolonizing French Food. Even worse, these courses actually fulfill general education requirements. It is still possible to earn a great education at Princeton, Harvard, Yale, Penn, Columbia, Brown, Cornell, or Dartmouth, but doing so requires prudence and persistence. In *Slacking*, Adam Kissel, Rachel Alexander Cambre, and Madison Marino Doan dedicate one chapter to each Ivy League college, providing specific information about the coursework that serious students should pursue to extract a real education from these decaying institutions. Every chapter concludes with two course lists, both of which meet the school's general education requirements. One displays the worst collection of courses that an inveterate "slacker" could take to skate through the requirements for entertainment, reinforcement of political biases, and narrow specialization. The other lists the best choice of courses a dedicated striver could take to acquire a well rounded, content-rich liberal education. The contrast between the two sounds a rousing alarm bell for curriculum reform at America's best-known colleges.

frontiers of science columbia: Frontiers of Historical Imagination Kerwin Lee Klein, 2023-11-15 The American frontier, a potent symbol since Europeans first stepped ashore on North America, serves as the touchstone for Kerwin Klein's analysis of the narrating of history. Klein explores the traditions through which historians, philosophers, anthropologists, and literary critics have understood the story of America's origin and the way those understandings have shaped and been shaped by changing conceptions of history. The American West was once the frontier space where migrating Europe collided with Native America, where the historical civilizations of the Old World met the nonhistorical wilds of the New. It was not only the cultural combat zone where American democracy was forged but also the ragged edge of History itself, where historical and nonhistorical defied and defined each other. Klein maintains that the idea of a collision between people with and without history still dominates public memory. But the collision, he believes, resounds even more powerfully in the historical imagination, which creates conflicts between narration and knowledge and carries them into the language used to describe the American frontier. In Klein's words, We remain obscurely entangled in philosophies of history we no longer profess, and the very idea of 'America' balances on history's shifting frontiers. The American frontier, a potent symbol since Europeans first stepped ashore on North America, serves as the touchstone for Kerwin Klein's analysis of the narrating of history. Klein explores the traditions through which historians, philosophers, anthropol
