Focusing on lexicons in Middle Chinese, the middle form of the Chinese language used between the 4th century CE and the 12th century CE, this book first analyzes loanwords in Middle Chinese, a product of cultural exchange with western regions on the Silk Road and the impact of Buddhism. It then discusses the differences in meaning between monosyllables and polysyllables. The final chapter describes enriching idioms and proverbs and the major sources of words, including classical works, Buddhist texts, and the spoken language. fruit in chinese language: Integrating Chinese Linguistic Research and Language Teaching and Learning Hongyin Tao, 2016-10-03 Linguistic research and language teaching have generally been viewed as two separate types of academic endeavor. While linguists have been preoccupied with pattern finding and theory building, language teachers often encounter issues that are not readily addressed by theoretical linguistic research. This collection, with eleven papers touching upon a wide range of issues, stands out as one of the rare concerted efforts toward a meaningful integration of the two endeavors. Subject matters include tone, stress, word structure, grammatical categories (e.g. classifiers), syntactic structures (including argument structure), discourse particles, implicit and explicit knowledge, conversational repair, and learner corpus. With a diverse range of theoretical orientations, this collection serves to showcase some of the productive ways to create synergy between Chinese linguistic research and language education.
