i can problem solve: Model Programs in Child and Family Mental Health Michael C. Roberts, 2014-02-04 This volume is the product of a combined effort to find programs of service delivery that demonstrably treat the varieties of mental health problems of children and their families. The Section on Clinical Child Psychology (APA, Clinical Psychology Section I) and the Division of Child, Youth, and Family Services (APA, Division 37) established a task force whose mission was to identify, provide recognition for, and disseminate information on such programs. Their findings are presented here. The opening chapter and each section overview chapter provide orientations to the program descriptions and examine characteristics of exemplary interventions. The targeted problems include: child abuse and neglect, school adjustment problems, social problem-solving problems, autism and developmental disabilities, conduct disorders and severe emotional problems, children affected by disasters and trauma, children whose parents are divorced, children of teenage parents, family dysfunction and parent-child relationships, oppositional defiant disorder, and attention deficit disorder. Settings for interventions in the model programs include: schools, mental health centers and family guidance clinics, hospitals and pediatric practices, group homes and sheltered workshops, community centers, family homes, summer camps, and coordinated systems of care. The 18 programs described demonstrate the rationale for their interventions, their targeted populations, the type of staff and personnel, various programmatic interventions, aspects of the problems, implementation of interventions, and how the programs have been evaluated. The needs for improved mental health services remain strong. The supporting organizations and the members of the Task Force intend for the product of this project to be helpful in providing models for meeting those needs.

i can problem solve: Strengths-Based School Counseling JohnP. Galassi, 2017-07-05 Despite calls for a more preventive and developmental mode of functioning, school counseling has tended to be driven by a reactive and sometimes crisis orientation. Like social workers and school, counseling, and clinical psychologists, school counselors typically function to alleviate deficits, often in a small percentage of the students they serve. Although this orientation has served school counselors well in many instances, it is not empowering, it does not serve all students, and it does not replace those deficits with the type of positive characteristics and abilities that schools are attempting to develop. This is the first book to provide a comprehensive look at the theory, research, and intervention strategies that comprise a strengths-based, developmental approach to school counseling. In keeping with ASCA recommendations, the Strengths-Based School Counseling (SBSC) framework discusses academic, personal/social and career development outcomes for all students at the elementary, middle and secondary school levels. Other key features include: integrative framework SBSC builds upon contemporary research from a variety of areas: school counseling, developmental psychology, school psychology, education, positive psychology, resiliency, and social work. evidence-based interventions detailed examples of successful evidence-based interventions and environments are presented at the elementary, middle, and high school levels for each major developmental area (academic, personal/social, and career) identified in ASCA's National Model. readability and pedagogy beautifully written, the text includes lists of key points, tables of student strengths, illustrative examples, and student exercises.
