imc learning management system: *Responsive Open Learning Environments* Sylvana Kroop, Alexander Mikroyannidis, Martin Wolpers, 2015-01-07 This book presents the outcomes of four years of educational research in the EU-supported project called ROLE (Responsive Online Learning Environments). ROLE technology is centered around the concept of self-regulated learning that creates responsible learners, who are capable of critical thinking and able to plan their own learning processes. ROLE allows learners to independently search for appropriate learning resources and then reflect on their own learning process and progress. To accomplish this, ROLE's main objective is to support the development of open personal learning environments (PLE's). ROLE provides a framework consisting of "enabler spaces" on the one hand and tools, content, and services on the other. Utilizing this framework, learners are invited to create their own controlled and preferred learning environments to trigger and motivate self-regulated learning. Authors of this book are researchers, developers and teachers who have worked in the ROLE project and belong to the ROLE partner consortium consisting of 16 internationally renowned research institutions, including those from 6 EU countries and China. Chapters include numerous practical tutorials to guide the reader in creating innovative and useful learning widgets and present the best practices for the development of PLE's.

imc learning management system: *Computer-Driven Instructional Design with INTUITEL* Kevin Fuchs, Peter A. Henning, 2022-09-01 INTUITEL is a research project that was co-financed by the European Commission with the aim to advance state-of-the-art e-learning systems via addition of guidance and feedback for learners. Through a combination of pedagogical knowledge, measured learning progress and a broad range of environmental and background data, INTUITEL systems will provide guidance towards an optimal learning pathway. This allows INTUITEL-enabled learning management systems to offer learners automated, personalised learning support so far only provided by human tutors INTUITEL is - in the first place - a design pattern for the creation of adaptive e-learning systems. It focuses on the reusability of existing learning material and especially the annotation with semantic meta data. INTUITEL introduces a novel approach that describes learning material as well as didactic and pedagogical meta knowledge by the use of ontologies. Learning recommendations are inferred from these ontologies during runtime. This way INTUITEL solves a common problem in the field of adaptive systems: it is not restricted to a certain field. Any content from any domain can be annotated. The INTUITEL research team also developed a prototype system. Both the theoretical foundations and how to implement your own INTUITEL system are discussed in this book.

imc learning management system: e-Learning in Aviation Suzanne Kearns, 2016-04-29 Whereas traditional classroom instruction requires pilots to be pulled 'off the line', a training facility to be maintained and instructors to be compensated, e-learning is extremely cost-effective and therefore an attractive alternative. However, e-learning only saves money if the training is effective. Eager to reap financial benefits, e-learning courses have a history of varying dramatically in quality. The poorest courses are those that directly convert classroom-based presentations to an online format, not recognizing that computer-based instruction is an entirely different medium. Addressing this issue directly, e-Learning in Aviation explores the characteristics of computer-based course design and multimedia that are associated with improved learning. It then provides guidance regarding how to use research-based instructional design principles to plan, design, develop, and implement an e-Learning course within an aviation organization and continually evaluate whether or not the course is accomplishing instructional goals. A blended learning strategy, which incorporates both face-to-face and computer-based instruction, is suggested as the most appropriate choice for the majority of aviation companies. The goal of this approach is to utilize e-Learning as a tool to reduce time at the training centre and thereby increase pilot productivity and potentially improve the quality of training. Although the examples within this book focus on pilot training, the suggestions and guidelines are applicable to all employee groups within the industry.

imc learning management system: Learning and Diversity in the Cities of the Future Ilona Buchem, 2014 This publication includes the Proceedings of the PLE Conference 2013. The Conference on Personal Learning Environments is now an established annual international, scientific event and a reference point for the current state of the art in research and development in Personal Learning Environments (PLE). The PLE Conference creates a space for researchers and practitioners to share concepts, case studies and research related to the design, development and implementation of Personal Learning Environments in diverse educational contexts including formal and informal education. The 4th PLE Conference in 2013 took place at Beuth University of Applied Sciences in Berlin, Germany together with a parallel event at Monash University in Melbourne, Australia. The PLE Conference 2013 received 75 submissions and welcomed almost 100 delegates from Europe, Asia, Australasia, North and South America and Africa. The papers included in the Proceedings provide rich and valuable theoretical and empirical insights into Personal Learning Environments. Personal Learning Environments (PLE) is an approach in Technology-Enhanced Learning (TEL) based on the principles of learner autonomy, ownership and empowerment. PLEs are integrated, individual environments for learning which include specific technologies, methods, tools, contents, communities and services constituting complex learning infrastructures, enhancing new educational practices and at the same time emerging from these new practices. This represents a shift away from the traditional model of technology-enhanced learning based on knowledge transfer towards a model based on knowledge construction and sharing.

imc learning management system: *Automated Systems in the Aviation and Aerospace Industries* Shmelova, Tetiana, Sikirda, Yuliya, Rizun, Nina, Kuchеров, Dmytro, Dergachov, Konstantin, 2019-03-22 Air traffic controllers need advanced information and automated systems to provide a safe environment for everyone traveling by plane. One of the primary challenges in developing training for automated systems is to determine how much a trainee will need to know about the underlying technologies to use automation safely and efficiently. To ensure safety and success, task analysis techniques should be used as the basis of the design for training in automated systems in the aviation and aerospace industries. *Automated Systems in the Aviation and Aerospace Industries* is a pivotal reference source that provides vital research on the application of underlying technologies used to enforce automation safety and efficiency. While highlighting topics such as expert systems, text mining, and human-machine interface, this publication explores the concept of constructing navigation algorithms, based on the use of video information and the methods of the estimation of the availability and accuracy parameters of satellite navigation. This book is ideal for aviation professionals, researchers, and managers seeking current research on information technology used to reduce the risk involved in aviation.

imc learning management system: *Smart Cities in Europe and Asia* Prana Krishna Biswas, Robert Dygas, 2023-07-24 The smart city concept, together with the growing importance of the UN's Sustainable Development Goals, has a significant impact on city management and governance. This

book examines real cases of smart city management across Asia and Europe. It covers regions such as Iceland, Estonia, Poland, Germany, India, Indonesia, Malaysia, Singapore, and Vietnam to systemize the knowledge in the field. It evaluates smart cities' efficiency and analyzes and assesses the standards, norms and best practices involved in the management of smart cities. The book answers questions such as what it is that makes smart cities stand out, why some countries in Europe and Asia have more smart cities than others, whether smart cities support the economy and GDP growth of the country, and what the main determinants of forming smart cities in Asia and Europe are. It also evaluates whether smart cities secure higher standards of living for their citizens as compared to regular cities. Many theoretical concepts and theories are developed and then verified from the perspective of Western economies. Central Eastern European and Asian countries are frequently overlooked, thus, examining the smart city idea from the viewpoint of non-Western economies offers a fresh insight into the concept and its adaptation and evolution. The range of issues analyzed in the book are multilayered and approached from a wide array of perspectives, from macroeconomics to management, finance and technology, and public policy. Thus, the book is addressed to researchers, students, and academics who specialize in sustainable and regional development, economic geography, and management. It will also be of interest to urban planners, environmental scientists, and policymakers.

imc learning management system: *Competency-Based Education in Aviation* Suzanne K. Kearns, Timothy J. Mavin, Steven Hodge, 2017-05-15 Whether a trainee is studying air traffic control, piloting, maintenance engineering, or cabin crew, they must complete a set number of training 'hours' before being licensed or certified. The aviation industry is moving away from an hours-based to a competency-based training system. Within this approach, training is complete when a learner can demonstrate competent performance. Training based on competency is an increasingly popular approach in aviation. It allows for an alternate means of compliance with international regulations - which can result in shorter and more efficient training programs. However there are also challenges with a competency-based approach. The definition of competency-based education can be confusing, training can be reductionist and artificially simplistic, professional interpretation of written competencies can vary between individuals, and this approach can have a high administrative and regulatory burden. *Competency-Based Education in Aviation: Exploring Alternate Training Pathways* explores this approach to training in great detail, considering the four aviation professional groups of air traffic control, pilots, maintenance engineers, and cabin crew. Aviation training experts were interviewed and have contributed professional insights along with personal stories and anecdotes associated with competency-based approaches in their fields. Research-based and practical strategies for the effective creation, delivery, and assessment of competency-based education are described in detail.

imc learning management system: *Business Process Change Management* August-Wilhelm Scheer, Ferri Abolhassan, Wolfram Jost, Mathias Kirchmer, 2012-11-03 Today's business environment is constantly changing: New customer requirements or products, an evolving competition, new IT solutions like EAI or web services, outsourcing opportunities, mergers & acquisitions or changing legal requirements are just a few reasons for this change. Intra and inter-enterprise processes of enterprises have to change accordingly. Therefore organizations have to ensure an efficient and effective business process change management in order to stay competitive and survive on the long term. This is a precondition to achieve and maintain business process excellence. However, the execution of successful change management has been extremely difficult. Many initiatives failed because of an unclear scoping and a missing definition of deliverables. Only the comprehensive design of the business processes to be improved creates a basis for a focused management of change. Change management can then be handled as a process by itself. It becomes measurable and can be controlled. It is an integral part of business process lifecycle management. Key-enabler is the ARIS Toolset which supports all activities of the process and change management: Business strategies, the resulting process specifications and execution as well as the process controlling are executed by using ARIS tools - in the phase of change as well as

during the daily operation.

imc learning management system: Research Anthology on Reliability and Safety in Aviation Systems, Spacecraft, and Air Transport Management Association, Information Resources, 2020-09-24 As with other transportation methods, safety issues in aircraft can result in a total loss of life. Recently, the air transport industry has come under immense scrutiny after several deaths occurred due to aircraft design and airlines that allowed improperly inspected aircraft to fly. Spacecraft too have found errors in system software that could lead to catastrophic failure. It is imperative that the aviation and aerospace industries continue to revise and refine safety protocols from the construction and design of aircraft, to secure and improve aviation systems, and to test and inspect aircraft. The Research Anthology on Reliability and Safety in Aviation Systems, Spacecraft, and Air Transport is a vital reference source that examines the latest scholarly material on the use of adaptive and assistive technologies in aviation to establish clear guidelines for the design and implementation of such technologies to better serve the needs of both military and civilian pilots. It also covers new information technology use in aviation systems to streamline the cybersecurity, decision making, planning, and design processes within the aviation industry. Highlighting a range of topics such as air navigation systems, computer simulation, and airline operations, this multi-volume book is ideally designed for pilots, scientists, engineers, aviation operators, air traffic controllers, air crash investigators, teachers, academicians, researchers, and students.
