images of political map: *The Political Twittersphere in India* Shekh Moinuddin, 2019-01-29

The book investigates political re/tweets that reveal the nature and patterns of politics and digital political revolution in India. The re/tweets are made by Indian politicians at various capacities in order to communicate to followers, which shaped the political discourse in form of response, activism, and technology. The book is based on interdisciplinary approaches wherein geography interfaces with political, cultural, social, economic and social media studies. The book is mapping patterns of spatial politics through Twitter which revolutionized the digital politics in India. It discusses and answers the questions: Why do politicians use Twitter and other social networking sites? When do politicians make re/tweets? Is Twitter all about official? The book triggers questions about the politics of gadgets. To what extent are politics inseparable from re/tweets? The book adheres the inevitable role of technology, particularly of Twitter in day-to-day spatial reporting in the shape of politics, culture, identity, ideology, norms and empiricism. This book is the result of the research project "Mapping Political Tweets: The Digital Political Revolution in India" (2

struggle. This is the first book in the literature to engage directly with these changing ways of communicating politics in the region - and particularly with the politics of the image, its power as a political tool. Lina Khatib presents a cross-country examination of emerging trends in the use of visuals in political struggles in the Middle East, from the Cedar Revolution in Lebanon to the Green Movement in Iran, to the Arab Spring in Egypt, Syria and Libya. She demonstrates how states, activists, artists and people 'on the street' are making use of television, the social media and mobile phones, as well as non-electronic forms, including posters, cartoons, billboards and graffiti to convey and mediate political messages. She also draws attention to politics as a visual performance by leaders and citizens alike. With a particular focus on the visual dynamics of the Arab Spring, and based on case studies on the visual dimension of political protest as well as of political campaigning and image management by political parties and political leaders, *Image Politics in the Middle East* shows how visual expression is at the heart of political struggle in the Middle East today. It is a hard-hitting, enjoyable, groundbreaking book, challenging the traditional ways in which politics in the Middle East is conceived of and analysed.

images of political map: *Images in Use* Matteo Stocchetti, Karin Kukkonen, 2011-10-26 News coverage of EU negotiations, children's war memories or TV series glamourising political processes - images pervade both private and public discourse, and visual communication plays a key role in our social negotiation of values. Conceptualising images as "images in use", this volume considers the agencies behind visual communication and its impact on society. *Images in Use* engages critically with traditional approaches to visual analysis, offers suggestions for alternative, socially situated analyses of images and demonstrates the explanatory force of thinking through "images in use" in a series of case studies. The conceptual contributions consider broader issues of critical theory, representation, as well as the mediatization of politics. The case studies offer a survey of current visual communication including news coverage, political cartoons, political rhetoric, memory culture, celebrity humanitarianism, reality TV, as well as the narratives of blockbuster cinema and comics. This volume proposes a new approach to visual communication, situating images in their social contexts and identifying the real, rhetorical and political impact of their use.

images of political map: *Web Mapping Illustrated* Tyler Mitchell, 2005-06-17 With the help of the Internet and accompanying tools, creating and publishing online maps has become easier and rich with options. A city guide web site can use maps to show the location of restaurants, museums, and art venues. A business can post a map for reaching its offices. The state government can present a map showing average income by area. Developers who want to publish maps on the web often

focus on trade, migration, and security highlighting the importance of states, their length of time since independence, and border bureaucrats' discretionary practices. Drawing on her Border Inequalities Database for a global perspective, Staudt calls for reducing inequalities and building institutions in the common grounds of borderlands. The book features maps and other visuals with lists of links at the close of most chapters. Broadly comparative in nature, *Border Politics in a Global Era* will appeal not only to students of border studies; it will also stimulate attention in comparative politics, international studies, and political geography.

images of political map: Imaginal Politics Chiara Bottici, 2014-05-06 Between the radical, creative capacity of our imagination and the social imaginary we are immersed in is an intermediate space philosophers have termed the imaginal, populated by images or (re)presentations that are presences in themselves. Offering a new, systematic understanding of the imaginal and its nexus with the political, Chiara Bottici brings fresh insight into the formation of political and power relationships and the paradox of a world rich in imagery yet seemingly devoid of imagination. Bottici begins by defining the difference between the imaginal and the imaginary, locating the imaginal's root meaning in the image and its ability to both characterize a public and establish a set of activities within that public. She identifies the imaginal's critical role in powering representative democracies and its amplification through globalization. She then addresses the troublesome increase in images now mediating politics and the transformation of politics into empty spectacle. The spectacularization of politics has led to its virtualization, Bottici observes, transforming images into processes with an uncertain relationship to reality, and, while new media has democratized the image in a global society of the spectacle, the cloned image no longer mediates politics but does the act for us. Bottici concludes with politics's current search for legitimacy through an invented ideal of tradition, a turn to religion, and the incorporation of human rights language.

images of political map: Imaging and Mapping Eastern Europe Katarzyna

Murawska-Muthesius, 2021-05-10 *Imaging and Mapping Eastern Europe* puts images centre stage and argues for the agency of the visual in the construction of Europe's east as a socio-political and cultural entity. This book probes into the discontinuous processes of mapping the eastern European space and imaging the eastern European body. Beginning from the Renaissance maps of Sarmatia Europea, it moves onto the images of women in ethnic dress on the pages of travellers' reports from the Balkans, to cartoons of children bullied by dictators in the satirical press, to Cold War cartography, and it ends with photos of protesting crowds on contemporary dust jackets. Studying the eastern European 'iconosphere' leads to the engagement with issues central for image studies and visual culture: word and image relationship, overlaps between the codes of othering and self-fashioning, as well as interaction between the diverse modes of production specific to cartography, travel illustrations, caricature, and book cover design. This book will be of interest to scholars in art history, visual culture, and central Asian, Russian and Eastern European studies.

images of political map: Image Politics of Climate Change Birgit Schneider, Thomas Nocke, 2014-06-15 Scientific research on climate change has given rise to a variety of images picturing climate change. These range from colorful expert graphics, model visualizations, photographs of extreme weather events like floods, droughts or melting ice, symbols like polar bears, to animated and interactive visualizations. Climate change graphics have not only increased knowledge about the subject, they have begun to influence popular awareness of global weather events. The status of climate pictures today is particularly crucial, as global climate change as a long-term process cannot be seen. When images are widely distributed, they are able to shape how the world is thought about and seen. It is this implicit basic assumption of the power of images to influence reality that this book addresses: today's images might become the blueprint for tomorrow's realities. »Image Politics of Climate Change« combines a wide interdisciplinary range of perspectives and questions, treated here in sixteen interdisciplinary case studies. The author's specializations include both visual practice and theory: in the fields of climate sciences, computer graphics, art, curating, art history and visual studies, communication and cultural science, environmental and science & technology studies. The close interlinking of these viewpoints promotes in-depth insights into issues of production and analysis of climate visualization.

images of political map: Screenscapes of e-Religiosity in India Shekh Moinuddin, 2023-04-01 This book deals with three different subjects: geography, social media and religion equally to discuss e-religiosity in terms of screenscapes that shaped digital socialization processes wherein the role of digital devices in general and smartphones in particular are considered crucial and critical. The spatial dimension is the primary foundation of the book wherein both space and place are discussed in digital manifestations in spatial sense. Religiosity is discussed variably in a sense of spirituality, social theories, religions and images. The book uses some illustrations to understand image politics. Image politics is quintessential in the age of digital technologies when production and reproduction of images are not restricted to business only; rather it attracts politics too and politicians often use the same to make political scores against opponents. The book covers contemporary digital discourses of e-religiosity in a sense of screenscapes that often found pivot in daily discussions across social media platforms. Screenscapes are considered as mediated technologies when contents can be accessed from different social media apps to construct or deconstruct their views, narratives, discourses, ideas, emotions, and perceptions

institutional practices, providing key methodological frames for understanding global governance in the realms of urban politics, refugee control, health crises and humanitarian interventions and new techniques of biometric regulation and autonomic computation. Imaginaries provides examples of future-oriented analytical frameworks, highlighting the transformation of mapping in an age of digital technologies of control and regulation. In a world conceived as without borders and fixed relations, new forms of mapping stress the need to rethink assumptions of power and knowledge. This book provides a sophisticated and nuanced analysis of the role of mapping in contemporary global governance, and will be of interest to students and researchers working within politics, geography, sociology, media, and digital culture and technology. It refers to the attributes and relative locations of people and objects in the environment, and is an essential component in the adaptive process of spatial decision-making--such as finding a safe and quick route to from work, locating potential sites for a new house or business, and deciding where to travel on a vacation trip. Cognitive processes are not constant, but undergo change with age or development and use or learning. Image and Environment, now in paperback, is a pioneer study.
