Key Components of the Standards

The Illinois state standards for physical education encompass several fundamental components that guide curriculum development and instructional practices. These components focus on skill development, knowledge acquisition, and the promotion of physical fitness and health-related behaviors.

Motor Skills and Movement Patterns

One of the core elements of the standards is the development of fundamental motor skills and movement patterns. Students are expected to demonstrate competency in locomotor, non-locomotor, and manipulative skills. These foundational abilities enable participation in a variety of physical activities and sports, fostering confidence and coordination.

Physical Fitness and Activity

The standards emphasize the importance of physical fitness by encouraging regular participation in moderate to vigorous physical activities. Students learn about the components of fitness, including cardiovascular endurance, muscular strength, flexibility, and body composition. The goal is to promote habits that contribute to health and well-being.

Health-Enhancing Behaviors

In addition to physical skills, the Illinois standards incorporate health-enhancing behaviors such as nutrition awareness, injury prevention, and stress management. These elements support the development of a holistic understanding of wellness beyond physical activity alone.

Social and Emotional Learning

Physical education is also a platform for cultivating social and emotional skills such as teamwork, leadership, cooperation, and respect. The standards encourage activities that build positive relationships and promote responsible decision-making in physical activity contexts.

Implementation and Instructional Strategies

Effective implementation of the Illinois state standards for physical education requires thoughtful instructional strategies tailored to diverse student needs and developmental stages. Developmentally Appropriate Practices

Physical education programs in Illinois emphasize developmentally appropriate practices that match the cognitive and physical abilities of students at different grade levels. This approach ensures that activities are challenging yet achievable, promoting skill mastery and confidence.

Inclusive and Adaptive Instruction

The standards advocate for inclusive instruction that accommodates students with varying abilities, including those with disabilities. Adaptive physical education strategies are integral to providing equitable opportunities for all students to participate and benefit from physical education.

Integration of Technology

Modern physical education programs may incorporate technology tools such as fitness trackers, video analysis, and interactive software to enhance learning and motivation. These tools support data-driven instruction and help students monitor their progress toward fitness goals.

Collaboration with Health Education

Physical education teachers often collaborate with health educators to deliver coordinated messages about wellness. This interdisciplinary approach reinforces concepts related to nutrition, mental health, and healthy lifestyle choices, creating a comprehensive health education experience.

Performance-Based Assessments

Performance-based assessments require students to demonstrate proficiency in motor skills and physical activities. These assessments may include skill tests, fitness challenges, and game play evaluations, providing tangible evidence of student competence.

Fitness Testing

Standardized fitness tests such as the FitnessGram are commonly used to evaluate components like cardiovascular endurance, muscular strength, and flexibility. These tests help identify students' fitness levels and inform instruction aimed at improvement.

Knowledge and Behavior Assessments

Written quizzes, assignments, and self-reflection activities assess students' understanding of health-related concepts and their attitudes towards physical activity. These assessments support cognitive and affective domains of learning in physical education.

illinois state standards for physical education: Educating the Student Body Institute of Medicine, Food and Nutrition Board, Committee on Physical Activity and Physical Education in the School Environment, 2013-11-30 Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

illinois state standards for physical education: Shape of the Nation Report National Association for Sport and Physical Education, 2006 For nearly 20 years the National Association for Sport and Physical Education (NASPE) has been conducting the Shape of the Nation Report every few years to summarize information for the profession and the public regarding the status of physical education in the American educational system. The preeminent national authority on physical education and a recognized leader in sport and physical activity, NASPE is partnering on the 2006 Shape of the Nation Report with the American Heart Association (AHA), a national voluntary health agency whose mission is to reduce disability and death from cardiovascular diseases and stroke. This joint project is important to both organizations because, in a time of increasing health risks and health care costs in America, prevention is key and exemplary physical education programs must be part of the solution for inactivity, obesity, and related chronic diseases. The challenge of the first Shape of the Nation Report in 1987 continues in this latest survey. That is, typically state mandates are broad and general, leaving many specifics open to interpretation. The purpose of this Shape of the Nation Report is to provide current information about the status of physical education in each state and the District of Columbia. This report will not only bring attention to the importance of quality, daily physical education programs for all school age children; it will also provide information that can be used as a basis for expanding and improving physical education programs in those states that need assistance. The vision is that every student will become physically educated and thus possess the knowledge, skills, and confidence to be physically active and healthy for a lifetime. Appended are: (1) National Standards and Guidelines for K-12 Physical Education; (2) Federal Legislation Impacting Physical Education; (3) The Fight for Physical Education in the States; and (4) Public Policy Agenda for Physical Education Research. [This project was also sponsored by the volunteers and leaders of the American Heart Association.].

illinois state standards for physical education: Lasting Change in Foreign Language Education John L. Watzke, 2003-03-30 Lasting Change in Foreign Language Education presents a historical account of foreign language in general education. The author examines the struggle of this subject discipline to align with the changing mission of secondary education as it emerged as the predominant institution enrolling students in the study of second languages. This 100-year history suggests trends persistent across major periods of reform to explain current problems in the expansion of learning opportunities in foreign language. Included is a complete database of education statistics on foreign language education and national and state education law from 1899 to the present. Analysis of this data is presented in multiple formats to describe the historical capacity of the education system to achieve reform. A review of contemporary standards-based education initiatives in states and school districts similarly serves to reflect how historical trends continue to restrict change. Concise policy implications are suggested as a means to address historical precedence and the greater mission of general education in the development of education policy and its transformation into practice. Policy development must include a greater understanding of the historical development of foreign language in general education. This vital link has been lacking in the past century as foreign language has struggled to realign itself with the changing mission of general education. For example, there are distinct curricular differences between a general education for all students and one for leadership and higher education. Only the latter makes room for solid foreign language education. In addition, the study of foreign language has remained primarily a beginning-level endeavor for the majority of students over the past century.

This trend results in significant pressure on the beginning level curriculum, particularly during periods of reform, to provide multiple academic outcomes in education.

illinois state standards for physical education: Issues In Education Geraldine Coleman, 2000-11-30 Very few issues are as important as education today and Dr. Coleman weaves extant research with personal experiences to provide a contextual framework from which the reader can garner a more intense understanding of the issues. She covers such issues as parental involvement, academic achievement, teacher attitude, discipline, student motivation, and the impact of social problems on the education process and student achievement. The discourse evolves around five underlying themes: education is a partnership, perceptions and attitudes dictate our behavior, knowledge creates understanding and understanding creates change; there are different ways of knowing and educators must expand their pedagogy to acknowledge and respond to the varied learning styles of students. Because of the many social problems that impact the lives of students, there is a need to redefine what it means to be a teacher and educate the whole child. The author presents the issues from different perspectives, emphasizing the need for home, school and community to work together to advance the educational agenda for all children. Dr. Coleman offers an action plan for change and sends a clear message that by combining efforts, schools, homes and communities can affect change.
