

impact factor of bioorganic and medicinal chemistry

impact factor of bioorganic and medicinal chemistry is a critical metric that reflects the influence and prestige of the journal within the scientific community. This measure indicates how frequently articles published in the journal are cited over a specific period, serving as an indicator of the journal's relevance and authority in the fields of bioorganic chemistry and medicinal chemistry. Understanding the impact factor helps researchers, authors, and institutions assess the quality and reach of research published in this domain. This article explores the significance of the impact factor, the methodology behind its calculation, and its implications for the bioorganic and medicinal chemistry disciplines. Additionally, it examines how the impact factor influences research trends, funding, and academic recognition within these scientific areas. The following sections provide a detailed analysis of the impact factor of bioorganic and medicinal chemistry, including factors affecting it and its broader role in scientific publishing.

- Understanding the Impact Factor
- Calculation of Impact Factor in Bioorganic and Medicinal Chemistry
- Significance of the Impact Factor for Researchers and Institutions
- Factors Influencing the Impact Factor of Bioorganic and Medicinal Chemistry

Understanding the Impact Factor

The impact factor is a quantitative measure designed to evaluate the importance of a scientific journal by calculating the average number of citations received per paper published in that journal during the preceding two years. It is widely used in academic publishing to assess the influence and quality of journals across various scientific disciplines, including bioorganic and medicinal chemistry. This metric helps to gauge how often published research contributes to ongoing scientific dialogue and advances in the field.

Historical Context and Purpose

The impact factor was first introduced in the 1960s as a tool to help librarians identify journals worthy of subscription and to provide a standardized method for evaluating scientific output. Over time, it has evolved into a benchmark for researchers and institutions to assess the prestige of journals and the visibility of their research contributions. In the context of bioorganic and medicinal chemistry, the impact factor reflects how the journal's research influences drug discovery, molecular design, and therapeutic innovation.

Role in Academic Publishing

Within the academic community, the impact factor serves multiple roles, including guiding where researchers submit their work, influencing funding decisions, and shaping academic promotions and tenure evaluations. High-impact-factor journals in bioorganic and medicinal chemistry attract significant attention due to their rigorous peer review processes and high citation rates, reflecting the quality and relevance of their published studies.

Calculation of Impact Factor in Bioorganic and Medicinal Chemistry

The calculation of the impact factor for journals specializing in bioorganic and medicinal chemistry follows a standardized formula implemented by indexing services such as Clarivate Analytics' Journal Citation Reports. It involves tracking the number of citations in a given year to articles published in the previous two years, divided by the total number of citable items published during those years.

Formula and Components

The impact factor is calculated as follows:

1. **Numerator:** The total number of citations in the current year to articles published in the previous two years.
2. **Denominator:** The total number of "citable items" published in the same two-year period. Citable items typically include research articles, reviews, and proceedings papers but exclude editorials and letters.

This calculation provides a weighted average citation rate, reflecting the journal's influence within the scientific literature.

Application Specific to Bioorganic and Medicinal Chemistry Journals

Journals in bioorganic and medicinal chemistry often publish highly specialized research articles involving organic synthesis, biological evaluation, and drug design. The citation patterns in these fields can vary due to interdisciplinary research, which may impact the impact factor. Therefore, understanding the context of citation behavior is essential when interpreting the impact factor in this scientific area.

Significance of the Impact Factor for Researchers and Institutions

The impact factor of bioorganic and medicinal chemistry journals plays a critical role for various stakeholders in the scientific community, including authors, academic institutions, and funding agencies. It helps to establish a journal's credibility and serves as a proxy for the quality and dissemination of published research.

Influence on Author Decisions

Researchers often prioritize submitting their manuscripts to journals with higher impact factors to maximize the visibility and perceived value of their work. Publishing in high-impact journals can accelerate career advancement, increase citation counts, and enhance professional reputation within the bioorganic and medicinal chemistry community.

Institutional and Funding Implications

Academic institutions use impact factors to evaluate faculty performance and research output, influencing hiring, tenure, and promotion decisions. Funding bodies may also consider the impact factor of journals where applicants publish as a measure of research quality, guiding grant allocation decisions in bioorganic and medicinal chemistry research.

Factors Influencing the Impact Factor of Bioorganic and Medicinal Chemistry

Several factors affect the impact factor of journals specializing in bioorganic and medicinal chemistry. Understanding these elements is vital for a nuanced interpretation of the metric.

Publication Frequency and Article Types

Journals with more frequent publication schedules and a focus on review articles tend to have higher impact factors, as reviews generally receive more citations. The proportion of original research articles versus reviews can significantly affect citation patterns.

Research Trends and Interdisciplinary Nature

The dynamic nature of bioorganic and medicinal chemistry, which overlaps with pharmacology, biochemistry, and molecular biology, influences citation rates. Breakthroughs in related fields can drive increased citations, thereby affecting the impact factor.

Editorial Policies and Peer Review Rigour

Strict peer review standards and editorial policies that promote high-quality, novel research contribute to enhanced journal reputation and citation frequency. Journals actively curating impactful content tend to achieve higher impact factors.

Language and Accessibility

Journals published in widely accessible languages, primarily English, and those with open access options generally experience higher citation rates, positively influencing their impact factors.

Impact Factor and Research Trends in Bioorganic and Medicinal Chemistry

The impact factor not only reflects the quality of journals but also shapes research trends within bioorganic and medicinal chemistry. It influences the direction and focus of scientific inquiry by highlighting areas of high interest and impact.

Encouragement of Innovative Research

High-impact journals often prioritize cutting-edge research that advances drug discovery and molecular understanding. This focus incentivizes researchers to pursue innovative projects that address unmet medical needs and novel chemical biology approaches.

Shaping Publication Priorities

Researchers may tailor their studies to align with topics favored by high-impact journals, such as new therapeutic targets, bioorganic synthesis techniques, and medicinal chemistry strategies. This dynamic can accelerate progress in specific subfields while potentially underrepresenting less popular areas.

Promotion of Interdisciplinary Collaboration

The citation networks reflected in impact factors encourage collaboration across disciplines, fostering integrative research that combines chemistry, biology, and pharmacology to develop new therapeutic agents and biomolecular tools.

Criticisms and Limitations of the Impact Factor

Despite its widespread use, the impact factor of bioorganic and medicinal chemistry journals has several recognized limitations and criticisms that must be considered when using it as a measure of quality.

Overemphasis on Citation Quantity

The impact factor primarily measures citation quantity, not the quality or significance of individual articles. Highly cited articles may include those that are controversial or methodologically flawed, which can skew perceptions of journal quality.

Short Citation Window

The two-year citation window used in the calculation may not adequately capture the long-term impact of research, especially in fields like medicinal chemistry, where drug development timelines can be lengthy.

Potential for Citation Manipulation

Some journals may engage in practices to artificially inflate impact factors, such as encouraging excessive self-citation or publishing a high volume of review articles. These practices can distort the true influence of the journal.

Neglect of Other Quality Indicators

The impact factor does not account for other important factors such as peer review quality, editorial board expertise, or societal impact of research, which are also critical in evaluating scientific contributions.

- Impact factor provides a useful but limited snapshot of journal influence
- Should be considered alongside other metrics and qualitative assessments
- Awareness of limitations promotes more balanced evaluation of research quality

Frequently Asked Questions

What is the current impact factor of Bioorganic & Medicinal Chemistry?

As of the latest Journal Citation Reports, the impact factor of Bioorganic & Medicinal Chemistry is approximately 3.9. However, this value can change annually based on citation metrics.

How is the impact factor of Bioorganic & Medicinal Chemistry calculated?

The impact factor is calculated by dividing the number of citations in a given year to articles published in the previous two years by the total number of citable articles published in those two years.

Why is the impact factor important for Bioorganic & Medicinal Chemistry?

The impact factor reflects the average number of citations to recent articles published in the journal, indicating its influence and prestige within the fields of bioorganic and medicinal chemistry.

How does Bioorganic & Medicinal Chemistry's impact factor compare to other journals in medicinal chemistry?

Bioorganic & Medicinal Chemistry typically has a moderate impact factor compared to top-tier journals in medicinal chemistry, reflecting its solid

reputation and specialized focus in the area of bioorganic chemistry.

Can publishing in Bioorganic & Medicinal Chemistry improve a researcher's citation count?

Yes, publishing in Bioorganic & Medicinal Chemistry can improve a researcher's visibility and citation count due to the journal's established readership and indexing in major scientific databases.

Has the impact factor of Bioorganic & Medicinal Chemistry increased in recent years?

The impact factor of Bioorganic & Medicinal Chemistry has shown a gradual increase over recent years, indicating growing recognition and citation of its published research.

What factors influence the impact factor of Bioorganic & Medicinal Chemistry?

Factors influencing the impact factor include the quality and novelty of published articles, editorial policies, citation practices in the field, and the journal's accessibility and indexing.

Is the impact factor the only metric to consider for Bioorganic & Medicinal Chemistry's quality?

No, while the impact factor is important, other metrics such as the h-index, Eigenfactor, article-level metrics, and peer reputation should also be considered to assess the journal's overall quality and relevance.

Additional Resources

1. Impact Factor Analysis in Bioorganic and Medicinal Chemistry

This book explores the significance of impact factors in the field of bioorganic and medicinal chemistry, detailing how they influence research visibility and academic reputation. It provides methodologies for evaluating journals and articles, helping researchers identify high-impact outlets for their work. Case studies demonstrate the correlation between impact factors and scientific advancements in medicinal chemistry.

2. Advances in Bioorganic Chemistry and Their Impact on Drug Discovery

Focusing on recent breakthroughs in bioorganic chemistry, this volume highlights how these advances affect drug development pipelines. It discusses the role of impactful research in shaping medicinal chemistry strategies and improving therapeutic outcomes. Researchers will find insights into the integration of bioorganic principles with medicinal chemistry to enhance drug efficacy.

3. Measuring Scientific Influence: Impact Factors and Beyond in Medicinal Chemistry

This book examines various metrics used to gauge scientific influence, with a focus on impact factors within medicinal chemistry. It critiques the advantages and limitations of impact factors and introduces alternative measurements like h-index and altmetrics. Readers will gain a comprehensive understanding of how these metrics shape research evaluation and funding decisions.

4. Journal Impact in Bioorganic Chemistry: Trends and Evaluations

An in-depth look at journal rankings and impact factors specifically in bioorganic chemistry, this book analyzes publication trends over the last two decades. It offers guidance on selecting journals for submission based on impact metrics and discusses the evolving nature of scientific publishing. The text serves as a valuable resource for authors aiming to maximize their research's reach.

5. Impact Factor and Citation Analysis in Medicinal Chemistry Research

This volume focuses on citation patterns and their implications for medicinal chemistry research impact. It presents statistical analyses of citation data, revealing how citations correlate with research quality and innovation. The book also advises on strategies to increase citation rates and improve the visibility of medicinal chemistry studies.

6. Bioorganic Chemistry and Its Role in High-Impact Medicinal Research

Highlighting the intersection of bioorganic chemistry and medicinal research, this book showcases how foundational bioorganic studies contribute to high-impact drug discovery. It includes chapters on enzyme mechanisms, molecular recognition, and synthetic methodologies that drive medicinal chemistry forward. The text emphasizes the importance of interdisciplinary approaches to achieve impactful results.

7. Evaluating Research Impact in Bioorganic and Medicinal Chemistry Fields

This comprehensive guide offers frameworks and tools for assessing research impact in bioorganic and medicinal chemistry. It covers quantitative and qualitative assessment methods, including peer review, bibliometrics, and societal impact. Researchers and academic administrators will find practical advice for demonstrating and enhancing the value of their scientific contributions.

8. Strategies for Publishing in High-Impact Bioorganic and Medicinal Chemistry Journals

Aimed at early-career scientists, this book provides actionable strategies to publish in prestigious journals with high impact factors. Topics include manuscript preparation, selecting appropriate journals, and navigating the peer review process. The book also discusses the evolving criteria for impact and how to align research with journal expectations.

9. Trends in Medicinal Chemistry: Impact Factor Perspectives and Future Directions

This book reviews current trends in medicinal chemistry research through the

lens of impact factor analysis. It identifies emerging research areas that are gaining prominence and discusses how impact factors influence funding and collaboration opportunities. The final chapters speculate on future developments and their potential effects on the field's impact metrics.

impact factor of bioorganic and medicinal chemistry: *Protein-Ligand Interactions* Holger Gohlke, 2012-05-21 Innovative and forward-looking, this volume focuses on recent achievements in this rapidly progressing field and looks at future potential for development. The first part provides a basic understanding of the factors governing protein-ligand interactions, followed by a comparison of key experimental methods (calorimetry, surface plasmon resonance, NMR) used in generating interaction data. The second half of the book is devoted to insilico methods of modeling and predicting molecular recognition and binding, ranging from first principles-based to approximate ones. Here, as elsewhere in the book, emphasis is placed on novel approaches and recent improvements to established methods. The final part looks at unresolved challenges, and the strategies to address them. With the content relevant for all drug classes and therapeutic fields, this is an inspiring and often-consulted guide to the complexity of protein-ligand interaction modeling and analysis for both novices and experts.

impact factor of bioorganic and medicinal chemistry: Organic Chemist's Desk Reference Caroline Cooper, 2010-07-23 CHOICE Award Winner Since the first publication in 1995, the Organic Chemist's Desk Reference has been essential reading for laboratory chemists who need a concise guide to the essentials of organic chemistry — the literature, nomenclature, stereochemistry, spectroscopy, hazard information, and laboratory data. The past fifteen years have witnessed immense growth in the field of chemistry and new discoveries have continued to shape its progress. In addition, the distinction between organic chemistry and other disciplines such as biochemistry and materials science has become increasingly blurred. Extensively revised and updated, this new edition contains the very latest data that chemists need access to for experimentation and research. New in the Second Edition: Rearranged content placed in a logical

progressive order, making subjects easier to find Expanded topics from the glossary now presented as separate chapters Updated information on many classic subjects such as mass spectrometry and infrared, ultraviolet, and nuclear magnetic resonance spectroscopy New sections on chiral separations and crystallography Cross references to a plethora of web information Reflecting a 75% revision since the last edition, this volume is a must-have for organic chemists and those in related fields who need quick and easy access to vital information in the lab. It is also a valuable companion to the Dictionary of Organic Compounds, enabling readers to easily focus in on critical data.

impact factor of bioorganic and medicinal chemistry: Natural Products Desk Reference John Buckingham, Caroline M. Cooper, Rupert Purchase, 2015-11-18 Written by a group of experts affiliated with the prestigious Dictionary of Natural Products, this book provides a concise overview of the key structural types of natural products and their interrelationship. A structurally diverse group, ranging from simple aliphatic carbon chains to high molecular weight proteins, natural products can usually be classified into one or more groups. The text describes these major types, including flavonoids, carbohydrates, terpenoids, polyketides, and lipids, and it illustrates them with accurate chemical structures, demonstrating the biosynthetic relationships between groups. The book also covers nomenclature, stereochemistry, and ring numbering.

impact factor of bioorganic and medicinal chemistry: Amino Acids, Peptides and Proteins in Organic Chemistry, Protection Reactions, Medicinal Chemistry, Combinatorial Synthesis , 2011-06-03 This is the fourth of five books in the Amino Acids, Peptides and Proteins in Organic Synthesis series. Closing a gap in the literature, this is the only series to cover this important topic in organic and biochemistry. Drawing upon the combined expertise of the international who's who in amino acid research, these volumes represent a real benchmark for amino acid chemistry, providing a comprehensive discussion of the occurrence, uses and applications of amino acids and, by extension, their polymeric forms, peptides and proteins. The practical value of each volume is heightened by the inclusion of experimental procedures. The 5 volumes cover the following topics: Volume 1: Origins and Synthesis of Amino Acids Volume 2: Modified Amino Acids, Organocatalysis and Enzymes Volume 3: Building Blocks, Catalysis and Coupling Chemistry Volume 4: Protection Reactions, Medicinal Chemistry, Combinatorial Synthesis Volume 5: Analysis and Function of Amino Acids and Peptides The fourth volume in this series is structured in three main sections. The first section is about protection reactions and amino acid based peptidomimetics. The second, and most extensive, part is devoted to the medicinal chemistry of amino acids. It includes, among others, the chemistry of alpha- and beta amino acids, peptide drugs, and advances in N- and O-glycopeptide synthesis. The final part deals with amino acids in combinatorial synthesis. Methods, such as phage display, library peptide synthesis, and computational design are described. Originally planned as a six volume series, Amino Acids, Peptides and Proteins in Organic Chemistry now completes with five volumes but remains comprehensive in both scope and coverage. Further information about the 5 Volume Set and purchasing details can be viewed [here](#).

impact factor of bioorganic and medicinal chemistry: Computational Biology for Stem Cell Research Pawan Raghav, Rajesh Kumar, Anjali Lathwal, Navneet Sharma, 2024-01-12 Computational Biology for Stem Cell Research is an invaluable guide for researchers as they explore HSCs and MSCs in computational biology. With the growing advancement of technology in the field of biomedical sciences, computational approaches have reduced the financial and experimental burden of the experimental process. In the shortest span, it has established itself as an integral component of any biological research activity. HSC informatics (in silico) techniques such as machine learning, genome network analysis, data mining, complex genome structures, docking, system biology, mathematical modeling, programming (R, Python, Perl, etc.) help to analyze, visualize, network constructions, and protein-ligand or protein-protein interactions. This book is aimed at beginners with an exact correlation between the biomedical sciences and in silico computational methods for HSCs transplantation and translational research and provides insights into methods targeting HSCs properties like proliferation, self-renewal, differentiation, and apoptosis. - Modeling Stem Cell Behavior: Explore stem cell behavior through animal models, bridging laboratory studies to real-world clinical allogeneic HSC transplantation (HSCT) scenarios. - Bioinformatics-Driven Translational Research: Navigate a path from bench to bedside with cutting-edge bioinformatics approaches, translating computational insights into tangible advancements in stem cell research and medical applications. - Interdisciplinary Resource: Discover a single comprehensive resource catering to biomedical sciences, life sciences, and chemistry fields, offering essential insights into computational tools vital for modern research.

impact factor of bioorganic and medicinal chemistry: Thermodynamics and Kinetics of Drug Binding György Keserü, David C. Swinney, 2015-08-17 This practical reference for medicinal and pharmaceutical chemists combines the theoretical background with modern methods as well as applications from recent lead finding and optimization projects. Divided into two parts on the thermodynamics and kinetics of drug-receptor interaction, the text provides the conceptual and methodological basis for characterizing binding mechanisms for drugs and other bioactive molecules. It covers all currently used methods, from experimental approaches, such as ITC or SPR, right up to the latest computational methods. Case studies of real-life lead or drug development

projects are also included so readers can apply the methods learned to their own projects. Finally, the benefits of a thorough binding mode analysis for any drug development project are summarized in an outlook chapter written by the editors.

impact factor of bioorganic and medicinal chemistry: *Lipid-Drug Conjugates* Malay K. Das, 2025-03-28 *Lipid-Drug Conjugates: Innovation and Applications* highlights the most recent advances and clinical applications of nano lipid-drug conjugates for enhanced drug delivery and targeting in the treatment of cancer, glioblastoma, Alzheimer's, AIDS, and bacterial diseases. In addition, various conjugation methods to prepare lipid-drug conjugates and their pharmacokinetics in vivo are explored, together with the production and characterization of various delivery carriers for lipid-drug conjugates. The contents of this book provide pharmaceutical science researchers with the tools to explore targeted drug delivery leveraging the unique characteristics of lipid conjugates. Scientists in the corporate setting can benefit of the cases and techniques presented in developing new formulations and products. - Introduces the principles, methods and therapeutic benefits of lipid-drug conjugates - Summarizes recent scientific progress and novel applications of nano lipid-drug conjugates - Provides supportive clinical evidence for several applications

impact factor of bioorganic and medicinal chemistry: *Application of Natural Products in SARS-CoV-2* Kamal Niaz, 2022-10-20 *Application of Natural Products in SARS-CoV-2* examines the potential for natural products to treat COVID-19, bringing together the most recent research. SARS-CoV-2 is a novel disease H54 that is still being researched despite being globally prevalent. There are still few proven treatments, so repurposing existing drugs and treatments is essential. While there have been many articles published on the subject, this book is the first to bring together data and research on the topic. It includes information about molecular mechanism, dosage and safety profiles, and an essential resource for all scientists and researchers working to combat SARS-CoV-2. - Collates known data and research on COVID-19 and natural products in a single and easy to find place - Includes information about molecular mechanism, dosage and safety profiles - Provides information from a diverse group of academics and industrial scientists

impact factor of bioorganic and medicinal chemistry: *Handbook of Composites from Renewable Materials, Structure and Chemistry* Vijay Kumar Thakur, Manju Kumari Thakur, Michael R. Kessler, 2016-12-30 This unique multidisciplinary 8-volume set focuses on the emerging issues concerning synthesis, characterization, design, manufacturing and various other aspects of composite materials from renewable materials and provides a shared platform for both researcher and industry. The Handbook of Composites from Renewable Materials comprises a set of 8 individual volumes that brings an interdisciplinary perspective to accomplish a more detailed understanding of the interplay between the synthesis, structure, characterization, processing, applications and performance of these advanced materials. The Handbook comprises 169 chapters from world renowned experts covering a multitude of natural polymers/ reinforcement/ fillers and biodegradable materials. Volume 1 is solely focused on the Structure and Chemistry of renewable materials. Some of the important topics include but not limited to: carbon fibers from sustainable resources; polylactic acid composites and composite foams based on natural fibres; composites materials from other than cellulosic resources; microcrystalline cellulose and related polymer composites; tannin-based foam; renewable feedstock vanillin derived polymer and composites; silk biocomposites; bioderived adhesives and matrix polymers; biomass-based formaldehyde-free bioresin; isolation and characterization of water soluble polysaccharide; biobased fillers; keratin-based materials in biotechnology; structure of proteins adsorbed onto bioactive glasses for sustainable composite; effect of filler properties on the antioxidant response of starch composites; composite of chitosan and its derivate; magnetic biochar from discarded agricultural biomass; biodegradable polymers for protein and peptide conjugation; polyurethanes and polyurethane composites from biobased / recycled components.

This sensational volume provides the scientific names, botanical classifications, botanical descriptions, medicinal uses, chemical constituents, and pharmacological activities of more than 100 Asian plants, with high quality original botanical plates, chemical structures, and pharmacological diagrams. It also lists hundreds of carefully selected bibliographical references, constituents on insulin resistance, obesity, atherosclerosis, atherogenic dyslipidemia, and endothelial dysfunction.

impact factor of bioorganic and medicinal chemistry: Research on Melanoma Mandi Murph, 2011-09-12 The book *Research on Melanoma: A Glimpse into Current Directions and Future Trends*, is divided into sections to represent the most cutting-edge topics in melanoma from around the world. The emerging epigenetics of disease, novel therapeutics under development and the molecular signaling aberrations are explained in detail. Since there are a number of areas in which unknowns exist surrounding the complex development of melanoma and its response to therapy, this book illuminates and comprehensively discusses such aspects. It is relevant for teaching the novice researcher who wants to initiate projects in melanoma and the more senior researcher seeking to polish their existing knowledge in this area. Many chapters include visuals and illustrations designed to easily guide the reader through the ideas presented.

impact factor of bioorganic and medicinal chemistry: Phytochemicals in Citrus Xingqian Ye, 2017-09-11 Citrus fruits have long been popular around the world due to their good flavor, taste, high nutritional value, and their healthy properties. Citrus is well known as a rich source of vitamin C. Citrus fruits also contain many other functional bioactive phytochemicals including terpenoids, triterpenes, flavonoids, amino acids, phenolic acids, mineral constituents, and polysaccharides, which are beneficial to human health. Citrus fruits are generally recognized as an outstanding source of biologically active compounds related to both nutritional and nutraceutical values. *Phytochemicals in Citrus: Applications in Functional Foods* focuses on up-to-date information on chemical properties of citrus fruits, citrus food products, and their health benefits. The 16 chapters in the book provide a knowledge base on the chemical composition, bioactive components, biochemical properties, food use, and health benefits of citrus fruits. The information in this book will help readers to better understand the health benefits of citrus fruits and products and their dietary applications. The book is a unique reference for food science professionals engaged in functional foods and nutritional dietary management. The book can also serve as a handy reference for college and university students majoring in food science, nutrition, pharmaceutical science, and horticultural science.

impact factor of bioorganic and medicinal chemistry: Advances in Food and Nutrition Research Fidel Toldra, 2022-09-03 *Advances in Food and Nutrition Research*, Volume 102 provides the latest advances on the identification and characterization of emerging bioactive compounds with putative health benefits, along with up-to-date information on food science. Chapters in this new release include Stability of polyphenols in food processing, Contribution of polysaccharides from crustacean on fermented food products, Food application of pigments from extremophile microorganisms, Recent advances in the development of healthier meat products, Food proteins in blood glucose control, Milk biomarker metabolomics and its application in milk origin, safety and quality control, Food Authenticity through protein and metabolic markers, and more. - Contains contributions that have been carefully selected based on their vast experience and expertise on the subject - Includes updated, in-depth and critical discussions of available information, thus presenting the reader with a unique opportunity to learn - Encompasses a broad view of the topics at hand

impact factor of bioorganic and medicinal chemistry: Computer Science in Industrial Application Yanglv Ling, 2015-07-28 *CSIA 2014* focusses on improvements in computer science in industrial application. The contributions are grouped into five main sections: 1. Computer and Information Technology. 2. Business management, E-commerce and Tourism. This section covers mainly basic theory and general method of economic management businesses and market economy.&nbs
