imperial college of engineering: Henry Dyer Nobuhiro Miyoshi, 2021-09-13 Ignored in Britain and forgotten for generations in Japan, Henry Dyer (1848-1918), engineer, educationalist and author of two major works on Japan as well as dozens of papers and pamphlets and other works, has been the subject of ongoing research by Nobuhiro Miyoshi (Hiroshima University) for over thirty years, culminating in this updated and expanded version of his original 1989 biography, Dyer no Nippon. At the age of 24, even before he had taken his final exams at Glasgow University, Henry Dyer was appointed principal of Japan's new Imperial College of Engineering (ICE), with a remit to set up a world-class engineering institution that would deliver the engineers with the technical know-how and expertise to build the New Japan. Dyer's appointment by Ito Hirobumi, the then Vice-Minister for Public Works and a member of the Japanese Embassy in London (later to become Prime Minister). In the nine years Dyer was in Japan – unfettered by ancient academic traditions and protocols – he formulated an approach to engineering education that enabled the ICE to become the most advanced institution of its kind in the world, later to become part of Tokyo University. This study makes an important new contribution to o-yatoi ('hired foreigner') studies of the Meiji period, particularly in the field of education, and helps illuminate existing perceptions regarding the nature of Japan's route to modernization.

imperial college of engineering: The History of Modern Japanese Education Benjamin C. Duke, 2009 The History of Modern Japanese Education is the first account in English of the construction of a national school system in Japan, as outlined in the 1872 document, the Gakusei. background for the Gakusei during the Tokugawa era which produced the initial leaders of modern Japan. Next, Benjamin Duke traces the Ministry of Education's investigations of the 1870s to determine the best western model for Japan, including the decision to adopt American teaching methods. He then goes on to cover the eventual reverse course sparked by the Imperial Household protest that the western model overshadowed cherished Japanese traditions. Ultimately, the 1890 Imperial Rescript on Education integrated Confucian teachings of loyalty and filial piety with Imperial ideology, laying the moral basis for a western-style academic curriculum in the nation's schools.

imperial college of engineering: *Flood Risk Science and Management* Gareth Pender, Hazel Faulkner, 2010-12-01 Approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years. Worldwide, there has been a move from a strategy of flood defence to one of flood risk management. Flood risk management includes flood prevention using hard defences, where appropriate, but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur. This change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically, environmentally, and in terms of social equity. Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding, but also the consequences. This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change, while socio-economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned. Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management; providing a multi-disciplinary reference text covering a wide range of flood management topics. Its targeted readership is the international research community (from research students through to senior staff) and flood management professionals, such as engineers, planners, government officials and those with flood management responsibility in the public sector. By using the concept of case study chapters, international coverage is given to the topic, ensuring a world-wide relevance.
