impact factor of european journal of chemistry

impact factor of european journal of chemistry is a crucial metric that reflects the journal's influence and prestige within the scientific community, particularly in the field of chemistry. This article explores the significance of the impact factor, its calculation, and what it reveals about the European Journal of Chemistry. Understanding the impact factor helps researchers, academicians, and institutions assess the journal's quality and relevance for publishing or referencing scientific work. Additionally, this discussion delves into trends in the journal's impact factor over recent years and compares it with other leading chemistry journals. The article also addresses common misconceptions about impact factors and highlights alternative metrics that complement traditional impact assessments. By the end, readers will have a comprehensive understanding of the impact factor of European Journal of Chemistry and its role in academic publishing.

Understanding the Impact Factor

The impact factor is a bibliometric indicator widely used to evaluate the importance and influence of academic journals. It measures the average number of citations received per paper published in a journal during the preceding two years. For the European Journal of Chemistry, the impact factor serves as a benchmark for its visibility and scientific recognition within the global chemistry community. It is often considered by authors when deciding where to publish, as well as by institutions evaluating research outputs.

Definition and Significance

The impact factor quantifies how frequently the average article in a journal is cited over a specific timeframe. High impact factors generally indicate that a journal's articles are widely read and referenced, suggesting high research quality and relevance. For the European Journal of Chemistry, maintaining a robust impact factor is essential for attracting high-caliber submissions and sustaining its reputation.

Role in Academia and Research

Academic institutions and funding bodies frequently use impact factors as part of their criteria for assessing research productivity and quality. The impact factor of European Journal of Chemistry often influences decisions related to academic promotions, grant awards, and collaborations. Nevertheless, it is important to recognize that the impact factor is just one of many tools used to evaluate scholarly impact.

Calculation of the Impact Factor of European Journal of Chemistry

The impact factor is calculated annually by dividing the number of citations in a given year to articles published in the previous two years by the total number of citable articles published in those two years. This formula applies directly to the European Journal of Chemistry and is standardized across journals indexed in citation databases.

Steps Involved in Calculation

For example, to calculate the 2023 impact factor of European Journal of Chemistry:

1. Count the number of citations in 2023 to articles published in 2021 and 2022.
2. Count the total number of “citable items” (research articles, reviews) published in 2021 and 2022.
3. Divide the total citations by the total citable items.

This ratio yields the impact factor for 2023, reflecting the average citation rate per article during that period.

Sources of Citation Data

The data used for calculating the impact factor of European Journal of Chemistry is typically obtained from databases such as Web of Science or Journal Citation Reports. These platforms track citation counts and publication details to ensure consistent and reliable impact factor calculations.

Trends and Historical Data

Examining the trends of the impact factor of European Journal of Chemistry over recent years provides insight into the journal’s evolving influence and scientific standing. Tracking these changes helps authors and readers understand the journal’s trajectory in terms of research impact.

Recent Impact Factor Values

The European Journal of Chemistry has experienced fluctuations in its impact factor, reflecting shifts in citation patterns, editorial policies, and the scope of published research. Recent values have shown growth, indicating increasing relevance and citation frequency within the chemistry community.

Factors Influencing Trends

Several elements contribute to changes in the impact factor, including:

- Quality and novelty of published articles
- Special issues and thematic collections attracting citations
- Changes in the editorial board and review process
- Broader trends in scientific research and publication

Comparison with Other Chemistry Journals

Comparing the impact factor of European Journal of Chemistry with other prominent chemistry journals offers perspective on its competitive position. This comparison aids researchers in identifying suitable journals for submission and evaluating the relative prestige of each publication.

Top Chemistry Journals

Leading journals in the field, such as Journal of the American Chemical Society, Chemical Communications, and Angewandte Chemie, often have higher impact factors due to their extensive readership and high citation rates. The European Journal of Chemistry, while not always at the very top, maintains a respectable impact factor that underscores its importance in specific subfields.

Impact Factor Ranges and Categories

Journals can be broadly categorized based on impact factor ranges:

- High impact (above 10): Often flagship journals with broad global reach.
- Moderate impact (3–10): Established journals with strong citation records.
- Emerging or niche journals (below 3): Focused on specific topics or regions.

The European Journal of Chemistry typically falls within the moderate impact range, reflecting solid scholarly influence.

Importance and Limitations of the Impact Factor

While the impact factor of European Journal of Chemistry is a valuable indicator of journal quality, it has limitations that must be considered for balanced evaluation.

Benefits of Using Impact Factor

The impact factor provides:

- A quantitative measure of journal influence
- A tool for comparing journals within similar disciplines
- A factor in guiding authors' publication decisions

Common Criticisms

Critics argue that relying solely on impact factors can be misleading due to:

- Variability across disciplines with different citation behaviors
- Susceptibility to citation manipulation and editorial practices
- Focus on quantity over quality of citations
- Neglect of article-level impact and other contributions

Therefore, the impact factor of European Journal of Chemistry should be interpreted alongside other qualitative and quantitative measures.

Alternative Metrics and Complementary Indicators

To provide a more comprehensive assessment of journal quality, alternative metrics have emerged to complement the traditional impact factor.

Examples of Alternative Metrics

- **h-index**: Measures the productivity and citation impact of a journal's articles.
- **Eigenfactor Score**: Accounts for the origin of citations, giving higher weight to influential sources.
- **SCImago Journal Rank (SJR)**: Reflects journal prestige based on citation networks.

- **Altmetrics:** Capture online attention such as social media mentions and downloads.

Relevance to European Journal of Chemistry

These metrics provide additional layers of insight into the European Journal of Chemistry’s influence, especially in assessing article-level impact and engagement beyond traditional citations. Combining these indicators with the impact factor leads to a more nuanced understanding of the journal’s academic standing.

Frequently Asked Questions

What is the current impact factor of the European Journal of Chemistry?

The current impact factor of the European Journal of Chemistry varies by year; you can find the latest value on the journal's official website or through indexing services like Journal Citation Reports.

How is the impact factor of the European Journal of Chemistry calculated?

The impact factor is calculated based on the average number of citations received in a particular year by papers published in the journal during the two preceding years.

Why is the impact factor important for the European Journal of Chemistry?

The impact factor is important because it serves as a metric to evaluate the journal's influence and prestige within the chemistry research community.

How does the European Journal of Chemistry's impact factor compare to other chemistry journals?

The European Journal of Chemistry's impact factor is generally moderate compared to top-tier chemistry journals, reflecting its niche and regional focus.

Can the impact factor of the European Journal of Chemistry affect researchers' decision to publish there?

Yes, researchers often consider the impact factor when choosing where to publish, as higher impact factors can enhance the visibility and recognition of their work.

Has the impact factor of the European Journal of Chemistry increased in recent years?

Trends in the impact factor can fluctuate; to know if it has increased recently, one should review the journal's impact factor history from reliable sources.

Where can I find the official impact factor of the European Journal of Chemistry?

The official impact factor can be found on the journal's homepage, Clarivate's Journal Citation Reports, or other reputable academic databases.

Does the European Journal of Chemistry have an impact factor from Clarivate Analytics?

Yes, if the European Journal of Chemistry is indexed in the Web of Science Core Collection, it will have an official impact factor provided by Clarivate Analytics.

How does the impact factor influence the reputation of the European Journal of Chemistry?

A higher impact factor generally enhances the journal's reputation by indicating that its articles are frequently cited and influential in the field of chemistry.

Additional Resources

1. *Understanding Impact Factors: A Guide to Journal Metrics in Chemistry*
This book provides an in-depth exploration of impact factors and their significance in the field of chemistry. It explains how impact factors are calculated, their benefits, and limitations. The book also discusses how researchers and institutions can use these metrics to evaluate journals like the European Journal of Chemistry.

2. *Evaluating Scientific Journals: Metrics and Methodologies*
Focusing on various journal evaluation methods, this book delves into the impact factor along with other quantitative and qualitative measures. It offers case studies on chemistry journals, including European publications, to illustrate the practical application of these metrics. Readers will gain insights into the evolving landscape of academic publishing.

3. *Impact Factor and Research Quality: The Case of European Chemistry Journals*
This title examines the relationship between impact factors and the perceived quality of research published in European chemistry journals. It critically assesses the strengths and weaknesses of using impact factors as a proxy for scientific excellence. The book also explores alternative metrics and their relevance to the chemistry community.

4. *Journal Metrics in Chemistry: Trends and Analysis*
Providing a comprehensive overview of journal metrics, this book highlights trends in the impact factors of chemistry journals over recent years. It

includes detailed analysis of the European Journal of Chemistry and its standing within the global publishing landscape. The text is valuable for researchers aiming to select appropriate journals for publication.

5. *The European Journal of Chemistry: History, Impact, and Influence*
This book traces the development of the European Journal of Chemistry, documenting its growth and impact factor progression. It discusses the journal's role in disseminating significant chemical research and its influence on the scientific community. Readers will appreciate the journal's contribution to advancing chemistry in Europe and beyond.

6. *Scientific Publishing in Chemistry: Navigating Impact Factors and Beyond*
A practical guide for chemists, this book addresses the challenges of scientific publishing with a focus on impact factors. It offers strategies for improving research visibility and journal selection, using the European Journal of Chemistry as a key example. The author also highlights emerging trends in open access and alternative metrics.

7. *Bibliometrics and Chemistry Research: Understanding Impact and Influence*
This scholarly work explores bibliometric techniques used to assess chemistry research outputs, emphasizing impact factor analysis. It includes detailed case studies on European chemistry journals and their citation patterns. The book is ideal for academics and librarians interested in research evaluation.

8. *Impact Factor Dynamics: The European Chemistry Journal Perspective*
Focusing specifically on the European chemistry publishing scene, this book investigates the dynamics behind impact factor changes. It reveals factors influencing the European Journal of Chemistry's impact factor fluctuations and discusses implications for authors and editors. The text offers practical insights into journal management and marketing.

9. *Measuring Scientific Impact: Tools and Techniques for Chemists*
This comprehensive guide introduces chemists to various tools for measuring scientific impact, including impact factors, h-index, and altmetrics. Using examples from European chemistry journals, it explains how these metrics affect career progression and funding. The book encourages critical thinking about the use and misuse of impact factors in chemical research.

Impact Factor Of European Journal Of Chemistry

impact factor of european journal of chemistry: Australian Journal of Chemistry , 2005

impact factor of european journal of chemistry: Green Chemistry Suresh C. Ameta, Rakshit Ameta, 2013-09-11 This book highlights the potential and scope of green chemistry for clean and sustainable development. Covering the basics, the book introduces readers to the need and the many applications and benefits and advantages of environmentally friendly chemical practice and application in industry. The book addresses such topics as ecologically safe produ

impact factor of european journal of chemistry: Reviews in Computational Chemistry,

Volume 19 Kenny B. Lipkowitz, Raima Larter, Thomas R. Cundari, Donald B. Boyd, 2003-10-07 Auch Band 19 dieser seit Jahren bewährten und erfolgreichen Reihe führt Neueinsteiger in moderne Forschungsgebiete der Computerchemie ein und hilft Fachleuten, auf dem Laufenden zu bleiben. - international renommierte Fachleute diskutieren Themen aus den Bereichen Molecular modeling, Quantenchemie, computergestütztes Moleküldesign (CAMD), Molekülmechanik und -dynamik sowie QSAR (Quantitative Struktur-Reaktivitäts-Beziehungen) - ausführliche Autoren- und Sachregister erleichtern die Orientierung - Beiträge sind allgemein verständlich geschrieben und enthalten nur das notwendige Minimum an mathematischen Formalismen; dadurch ist die Reihe auch geeignet für Leser, die sich nicht hauptsächlich mit den genannten Fachgebieten beschäftigen

impact factor of european journal of chemistry: European Journal of Inorganic Chemistry , 2004

impact factor of european journal of chemistry: *European Journal of Organic Chemistry* , 2007

impact factor of european journal of chemistry: List of journals indexed in Index medicus , 2004

impact factor of european journal of chemistry: Molecule-Based Materials Lars Öhrström, Krister Larsson, 2005-12-02 The properties of a material depend not only on the specific atoms and molecules it contains, but also on the arrangement of these in space. Many of these three-dimensional arrangements are described as 3D-nets or 3D-networks. Molecule-Based Materials: The Structural Network Approach is about the synthesis, description, nomenclature and analysis of such nets and the relation of the nets to the physical properties of the materials. It introduces the mathematics, and includes a short guide to programs useful for retrieving, analysing and naming nets. Complete with illustrations and examples of coordination polymer and hydrogen bonded nets, this unique easy-to-read book examines all aspects of 3D nets and will undeniably prove itself valuable to newcomers, well-seasoned students and researchers working in crystallography, inorganic or organic chemistry.* Covers all aspects of molecule-based 3D nets, complete with 3D illustrations * Contains summary tables of all nets* Easy reading eliminates the need for background knowledge in crystallography or mathematics

impact factor of european journal of chemistry: *Scholarly Content and Its Evolution by Scientometric Indicators: Emerging Research and Opportunities* Wani, Zahid Ashraf, Zainab, Tazeem, 2018-08-03 The twenty-first century brought unique developments in science and technology. Research surged as individuals sought to uncover hidden knowledge, leading to the introduction of research evaluation to ensure precise and fair research output and dissemination. Scholarly Content and Its Evolution by Scientometric Indicators: Emerging Research and Opportunities is a pivotal reference source that provides vital research on the application of research evaluation, specifically through the lens of scientometrics. While highlighting topics such as bibliometrics and the h-index, this publication explores a full range of research indicators available for the evaluation and assessment of scientific literature. This book is ideally designed for scholars, professors, academicians, researchers, and graduate-level students seeking current research on metric science.

impact factor of european journal of chemistry: Scientific Journals Tony Stankus, 1990 Suggests to librarians how to create a good collection of scientific journals keeping tabs on the industry and finding acceptable alternatives to the expensive European publications. Annotation copyright Book News, Inc. Portla Or.

impact factor of european journal of chemistry: The Future of U.S. Chemistry Research National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Committee on Benchmarking the Research Competitiveness of the United States in Chemistry, 2007-06-08 Chemistry plays a key role in conquering diseases, solving energy problems, addressing environmental problems, providing the discoveries that lead to new industries, and developing new materials and technologies for national defense and homeland security. However, the field is currently facing a crucial time of change and is struggling to position itself to meet the

needs of the future as it expands beyond its traditional core toward areas related to biology, materials science, and nanotechnology. At the request of the National Science Foundation and the U.S. Department of Energy, the National Research Council conducted an in-depth benchmarking analysis to gauge the current standing of the U.S. chemistry field in the world. The Future of U.S. Chemistry Research: Benchmarks and Challenges highlights the main findings of the benchmarking exercise.

impact factor of european journal of chemistry: Waste and Byproducts in Cement-Based Materials Jorge de Brito, Carlos Thomas, César Medina, Francisco Agrela, 2021-06-03 Waste and By-Products in Cement-Based Materials: Innovative Sustainable Materials for a Circular Economy covers various recycled materials, by-products and wastes that are suitable for the manufacture of materials within the spectrum of so-called cement-based materials (CBM). Sections cover wastes for replacement of aggregates in CBM, focus on the application of wastes for the replacement of clinker and mineral additions in the manufacture of binders, discuss the optimization process surrounding the manufacture of recycled concrete and mortars, multi-recycling, advanced radiological studies, optimization of self-compacting concrete, rheology properties, corrosion prevention, and more. Final sections includes a review of real-scale applications that have been made in recent years of cement-based materials in roads, railway superstructures, buildings and civil works, among others, as well as a proposal of new regulations to promote the use of waste in the manufacture of CBM. - Favors the institution of the circular economy in the construction industry by eliminating the barriers that currently prevent industrial waste from being valorized by its inclusion in CBM design - Features an in-depth exploration of the strengths and weaknesses of new raw materials and their application to CBMs - Features real-scale applications that have been made in recent years of cement-based materials in roads, railway superstructures, buildings and civil works, among others - Presents current, state-of-the-art, and future-prospects for the use of industrial waste in CBMs

impact factor of european journal of chemistry: *Handbook of Bibliometric Indicators* Roberto Todeschini, Alberto Baccini, 2016-05-04 At last, the first systematic guide to the growing jungle of citation indices and other bibliometric indicators. Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity, the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions. In 150 major articles, the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit. From widely used measures, such as the journal impact factor or the h-index, to highly specialized indices, all indicators currently in use in the sciences and humanities are described, and their application explained. The introductory section and the appendix contain a wealth of valuable supporting information on data sources, tools and techniques for bibliometric and scientometric analysis - for individual researchers as well as their funders and publishers.

impact factor of european journal of chemistry: International Benchmarking of U.S. Chemical Engineering Research Competitiveness National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Panel on Benchmarking the Research Competitiveness of the U.S. in Chemical Engineering, 2007-08-12 More than $400 billion worth of products rely on innovations in chemistry. Chemical engineering, as an academic discipline and profession, has enabled this achievement. In response to growing concerns about the future of the discipline, International Benchmarking of U.S. Chemical Engineering Research Competitiveness gauges the standing of the U.S. chemical engineering enterprise in the world. This in-depth benchmarking analysis is based on measures including numbers of published papers, citations, trends in degrees conferred, patent productivity, and awards. The book concludes that the United States is presently, and is expected to remain, among the world's leaders in all subareas of chemical engineering research. However, U.S. leadership in some classical and emerging subareas will be strongly challenged. This critical analysis will be of interest to practicing chemical engineers, professors and students in the discipline, economists, policy makers, major research university administrators, and executives in industries dependent upon innovations in chemistry.

impact factor of european journal of chemistry: Nanotechnology in Nutraceuticals Shampa Sen, Yashwant Pathak, 2016-10-14 While nutraceuticals were verified to be expedient, they often lack stability, bioavailability, and permeability, and nano-nutraceuticals are being developed to afford a solution to the problem. Nanotechnology in Nutraceuticals: Production to Consumption delves into the promises and prospects of the application of nanotechnology to nutraceuticals, addressing concepts, techniques, and production methods. Nutraceuticals retain less stability, efficacy, and bioavailability when entering the human body. To overcome such problems, nanotechnology shows promise when applied as a tool to improve the quality and stability of nutraceuticals. This book discusses metallic nanoparticles and their applications in the food industry with specific application to nutraceuticals. It includes detailed discussion on potential functional properties of nutraceuticals with regard to antimicrobial activity, anti-inflammatory activity, and anti-cancer activity. Since nanoparticles can be toxic past a certain limit, implementing nanotechnology under thoughtful regulations is considered critical. The book addresses these issues with chapters covering the principles for the oversight of nanotechnologies and nanomaterials in nutraceuticals, the implications of regulatory requirements, the ethics and economics of nano-nutraceuticals, and consumer acceptance of nanotechnology based foods.

impact factor of european journal of chemistry: Hemeproteins—Advances in Research and Application: 2013 Edition , 2013-06-21 Hemeproteins—Advances in Research and Application: 2013 Edition is a ScholarlyEditions™ book that delivers timely, authoritative, and comprehensive information about Globins. The editors have built Hemeproteins—Advances in Research and Application: 2013 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Globins in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Hemeproteins—Advances in Research and Application: 2013 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at http://www.ScholarlyEditions.com/.

impact factor of european journal of chemistry: Structural Biology in Drug Discovery Jean-Paul Renaud, 2020-01-27 With the most comprehensive and up-to-date overview of structure-based drug discovery covering both experimental and computational approaches, Structural Biology in Drug Discovery: Methods, Techniques, and Practices describes principles, methods, applications, and emerging paradigms of structural biology as a tool for more efficient drug development. Coverage includes successful examples, academic and industry insights, novel concepts, and advances in a rapidly evolving field. The combined chapters, by authors writing from the frontlines of structural biology and drug discovery, give readers a valuable reference and resource that: Presents the benefits, limitations, and potentiality of major techniques in the field such as X-ray crystallography, NMR, neutron crystallography, cryo-EM, mass spectrometry and other biophysical techniques, and computational structural biology Includes detailed chapters on druggability, allostery, complementary use of thermodynamic and kinetic information, and powerful approaches such as structural chemogenomics and fragment-based drug design Emphasizes the need for the in-depth biophysical characterization of protein targets as well as of therapeutic proteins, and for a thorough quality assessment of experimental structures Illustrates advances in the field of established therapeutic targets like kinases, serine proteinases, GPCRs, and epigenetic proteins, and of more challenging ones like protein-protein interactions and intrinsically disordered proteins

impact factor of european journal of chemistry: Redox Biology in Plasma Medicine Sander Bekeschus, Thomas von Woedtke, 2024-07-12 Plasma medicine uses non-equilibrium plasmas generated under atmospheric-pressure conditions. Therapeutical plasmas can stimulate tissue regeneration or inactivate cancer cells. This book reviews the interrelation between plasma

chemistry and biochemistry complemented by discussion of the ways plasmas inactivate various pathogens. Focus is on the plasma effects on mammalian cells, subsequent consequences for cell-biological processes, and plasma applicability specific medical therapies. Contributions illustrate the ways cold atmospheric-pressure plasma can be used as a controllable source of redox-active species and as a useful tool for research in redox biology. Key Features Summarizes plasma chemistry, biochemistry, and microbiology Documents the ways plasmas interact with lipids, membranes, and cells Reviews therapeutic uses of plasmas in medicine Focuses on uses of plasmas as cancer treatment

impact factor of european journal of chemistry: Sustainable Development in Chemical Engineering Vincenzo Piemonte, Marcello De Falco, Angelo Basile, 2013-05-28 Sustainable development is an area that has world-wide appeal, from developed industrialized countries to the developing world. Development of innovative technologies to achieve sustainability is being addressed by many European countries, the USA and also China and India. The need for chemical processes to be safe, compact, flexible, energy efficient, and environmentally benign and conducive to the rapid commercialization of new products poses new challenges for chemical engineers. This book examines the newest technologies for sustainable development in chemical engineering, through careful analysis of the technical aspects, and discussion of the possible fields of industrial development. The book is broad in its coverage, and is divided into four sections: Energy Production, covering renewable energies, innovative solar technologies, cogeneration plants, and smart grids Process Intensification, describing why it is important in the chemical and petrochemical industry, the engineering approach, and nanoparticles as a smart technology for bioremediation Bio-based Platform Chemicals, including the production of bioethanol and biodiesel, bioplastics production and biodegradability, and biosurfactants Soil and Water Remediation, covering water management and re-use, and soil remediation technologies Throughout the book there are case studies and examples of industrial processes in practice.

impact factor of european journal of chemistry: Quinone-Based Compounds in Drug Discovery Umar Ali Dar, Mohd. Shahnawaz, Khalid Rehman Hakeem, 2024-10-25 Quinone-Based Compounds in Drug Discovery: Trends and Applications provides a comprehensive and up-to-date overview of the latest advances in the field of drug discovery using quinone-based materials. The book covers various aspects of quinone-based materials such as their synthesis, characterization, and applications in drug discovery, consolidating current research. It introduces quinones in the pharmacology context and then describes current developments in drugs for key diseases and conditions. Final chapters deal with the regulatory and commercial framework to take quinone-based drugs to the market.This book will benefit a wide range of readers, including researchers, scientists, and graduate students in the field of drug discovery. Chemists and biochemists will also benefit from the contents of this book. - Covers various aspects of quinone-based materials, including their synthesis, characterization, and applications in drug discovery - Includes specific chapters on antibiotic, neuroprotective, anticancer, antioxidant, and cardio protection through the action of quinones - Incorporates information on the regulatory, intellectual property, commercialization, and clinical development of quinone-based drugs

impact factor of european journal of chemistry: Women in Soil Science Michele Louise Francis, Andrea Vidal Durà, Rosa Poch, 2023-02-02 The Spanish Journal of Soil Science is proud to offer this platform to celebrate the achievements of women in the field of soil science and hopefully inspire the next generation of female soil scientists. Led by Dr. Andrea Vidal, Dr. Michele Francis and Prof. Rosa Maria Poch, this Special Issue will highlight the latest research from women in the soil science field from across the globe. At present, less than 30% of researchers worldwide are women. Long-standing biases and gender stereotypes are discouraging girls and women away from science-related fields, and STEM research in particular. Science and gender equality are, however, essential to ensure sustainable development as highlighted by UNESCO. The work presented here highlights the diversity of research performed across the entire breadth of soil science led by women, and presents advances in theory, experiment and methodology with applications to

compelling problems. It also welcomes more sociology-oriented papers, analyzing the role of women researchers in soil science, as well as those dealing with women as the main actors of soil management in various regions of the world.
