math pick up lines funny: Crunching Calculus Vinayak Singh Oberoi, 2024-03-08 Mathematics has always been my 'weakness'. By weakness today I mean that I am in love with it. But I literally felt weak in my head also, when I was first introduced to - Calculus! Practice, practice, and more practice...there is no other way out. But often I felt if only I had a sort of handbook, a type of 'dictionary' (you know what I mean...) that would lay down the important features of the topic in a precise way, one after the other. I searched the internet and watched many videos on YouTube, and over and over I had one of the best Mathematics teachers in Army Public School, Kolkata: Mrs. M. Kathuria. With her help, I slowly tried to get a hang of this dreaded topic of Calculus. I am not sure, yet, how much I have succeeded, but I have managed to write this book. It is a brief description, a definition of sorts, of the main structure of the topic. I hope you guys like it and find it helpful. All the best!

math pick up lines funny: Talking about Leaving Revisited Elaine Seymour, Anne-Barrie Hunter, 2019-12-10 Talking about Leaving Revisited discusses findings from a five-year study that explores the extent, nature, and contributory causes of field-switching both from and among "STEM" majors, and what enables persistence to graduation. The book reflects on what has and has not changed since publication of Talking about Leaving: Why Undergraduates Leave the Sciences (Elaine Seymour & Nancy M. Hewitt, Westview Press, 1997). With the editors' guidance, the authors of each chapter collaborate to address key questions, drawing on findings from each related study source: national and institutional data, interviews with faculty and students, structured observations and student assessments of teaching methods in STEM gateway courses. Pitched to a wide audience, engaging in style, and richly illustrated in the interviewees' own words, this book affords the most comprehensive explanatory account to date of persistence, relocation and loss in undergraduate sciences. Comprehensively addresses the causes of loss from undergraduate STEM majors—an issue of ongoing national concern. Presents critical research relevant for nationwide STEM education reform efforts. Explores the reasons why talented undergraduates abandon STEM majors. Dispels popular causal myths about why students choose to leave STEM majors. This volume is based upon work supported by the Alfred P. Sloan Foundation Award No. 2012-6-05 and the National Science Foundation Award No. DUE 1224637.
