medical research of a sort crossword: I, Mathematician Peter Casazza, Steven G. Krantz, Randi D. Ruden, 2015-03-10 Mathematicians have pondered the psychology of the members of our tribe probably since mathematics was invented, but for certain since Hadamard's *The Psychology of Invention in the Mathematical Field*. The editors asked two dozen prominent mathematicians (and one spouse thereof) to ruminate on what makes us different. The answers they got are thoughtful, interesting and thought-provoking. Not all respondents addressed the question directly. Michael Atiyah reflects on the tension between truth and beauty in mathematics. T.W. Körner, Alan Schoenfeld and Hyman Bass chose to write, reflectively and thoughtfully, about teaching and learning. Others, including Ian Stewart and Jane Hawkins, write about the sociology of our community. Many of the contributions range into philosophy of mathematics and the nature of our thought processes. Any mathematician will find much of interest here.

medical research of a sort crossword: Beyond Smbation A.M. Klein, 1982-12-15 The broad range of A.M. Klein's interests, ideas, and activities is reflected in this selection of articles, editorials, and reviews - a selection that also displays the qualities that distinguished all his creative writing and the highly idiosyncratic nature of his style. The writings in this volume span a most critical juncture in human affairs; a period that witnessed the Great Depression, the rise of fascism, Nazism, and communism, the Second World War, and the emergence of the State of Israel. As a journalist, Klein did more than record the events - he gave expression to the feelings of his people and helped shape their responses. His wide reading, sensitivity, and intelligence made him a perceptive observer and keen analyst, while his command of language, his passion, rhetoric, and wit, made him an eloquent spokesman. These qualities enabled him to carry out the responsibilities, as he saw them, of chronicler and champion. Though Klein's major concern was with the Canadian Jewish scene, his interests were part of the mosaic of Canadian history and his work forms a chronicle and a commentary on events of world-wide significance. Klein's journalism relates frequently, in both substance and language, to his poems and fiction, and thus provides a context for the study of his creative writing. It also reveals aspects of his personality, values, and commitments, contributing to our understanding and appreciation of one of Canada's foremost writers.

medical research of a sort crossword: Advances and Challenges in Pain Measurement

Kenneth Craig, Loren Martin, Kai Karos, 2023-08-18 Lord Kelvin (William Thompson) "To measure is to know." "If you cannot measure it, you cannot improve it." Pain has proven elusive to definitive measurement in research and clinical settings. While the experience is familiar to virtually everyone, it also is recognized as complex and multidimensional. Critiques of the field advise that pain is often unrecognized, inadequately assessed and underestimated. Unidimensional scales relying upon self-report are commonly used both clinically and in research settings, but they are vulnerable to presentation bias and they fail to capture the complexity of this multidimensional phenomenon. In consequence, there has been considerable interest and effort devoted to the generation of measures capable to capturing the experience for both research and clinical purposes. Both behavioral and physiological approaches have been pursued. Verbal behavior is represented by self-report scales that vary in dimensionality, typically seeking to represent sensory, affective and cognitive features of the experience. The status of self-report scales as the gold standard for pain assessment has been questioned. Nonverbal measures seek to capture behavioral activity ranging from facial expression through limb movements and gestures to posture. Physiological measures are similarly wide-ranging capitalizing on recent developments in brain imaging and novel approaches to autonomic regulation. There also are efforts to fuse behavioral and physiological measures as a means of capturing the complexity of pain. This series of papers seeks to represent the most recent conceptual and empirical advances in the important and rapidly advancing field of pain assessment and measurement. We invite both reviews of the literature and research investigations advancing the field.
