medicine world holistic health center: Care at the End of the World Jina B. Kim, 2025-03-21 In *Care at the End of the World*, Jina B. Kim develops what she calls crip-of-color critique, bringing a disability lens to bear on feminist- and queer-of-color literature in the aftermath of 1996 US welfare reform and the subsequent evisceration of social safety nets. She examines literature by contemporary feminist, queer, and disabled writers of color such as Jesmyn Ward, Octavia Butler, Karen Tei Yamashita, Samuel Delany, and Aurora Levins Morales, who each bring disability and dependency to the forefront of their literary freedom dreaming. Kim shows that in their writing, liberation does not take the shape of the unfettered individual or hinge on achieving independence. Instead, liberation emerges by recuperating dependency, cultivating radical interdependency, and recognizing the numerous support systems upon which survival depends. At the same time, Kim demonstrates how theories and narratives of disability can intervene into state-authored myths of resource parasitism, such as the welfare queen. In so doing, she highlights the alternate structures of care these writers envision and their dreams of life organized around reciprocity and mutual support. medicine world holistic health center: Transgender Medicine Leonid Poretsky, Wylie C.

Hembree, 2019-02-22 Although transgender persons have been present in various societies throughout human history, it is only during the last several years that they have become widely acknowledged in our society and their right to quality medical care has been established. In the United States, endocrinologists have been providing hormonal therapy for transgender individuals for decades; however, until recently, there has been only limited literature on this subject, and non-endocrine aspects of medical care for transgender individual have not been well addressed in the endocrine literature. The goal of this volume is not only to address the latest in hormonal therapy for transgender individuals (including pediatric and geriatric age groups), but also to familiarize the reader with other aspects of transgender care, including primary and surgical care, fertility preservation, and the management of HIV infection. In addition to medical issues, psychological, social, ethical and legal issues pertinent to transgender individuals add to the complexities of successful treatment of these patients. A final chapter includes extensive additional resources for both transgender patients and providers. Thus, an endocrinologist providing care to a transgender person will be able to use this single resource to address most of the patient's needs. While Transgender Medicine is intended primarily for endocrinologists, this book will be also useful to primary care physicians, surgeons providing gender-confirming procedures, mental health professionals participating in the care of transgender persons, and medical residents and students.

medicine world holistic health center: *Reimagining Social Medicine from the South* Abigail H. Neely, 2021-07-12 In *Reimagining Social Medicine from the South*, Abigail H. Neely explores social medicine's possibilities and limitations at one of its most important origin sites: the Pholela Community Health Centre (PCHC) in South Africa. The PCHC's focus on medical and social factors of health yielded remarkable success. And yet South Africa's systemic racial inequality hindered health center work, and witchcraft illnesses challenged a program rooted in the sciences. To understand Pholela's successes and failures, Neely interrogates the "social" in social medicine. She makes clear that the social sciences the PCHC used failed to account for the roles that Pholela's residents and their environment played in the development and success of its program. At the same time, the PCHC's reliance on biomedicine prevented it from recognizing the impact on health of witchcraft illnesses and the social relationships from which they emerged. By rewriting the story of social medicine from Pholela, Neely challenges global health practitioners to recognize the multiple worlds and actors that shape health and healing in Africa and beyond.

Warren Salmon, 2022-08-12 Originally published in 1984, and now reissued with a new Preface, this was the first systematic and evaluative investigation of the holistic health movement – the first to put its contribution and limitations in both historical and current perspectives. The book answers two essential questions: how do alternative medicines challenge the tenets of conventional scientific medicine; and could a synthesis of these alternative medicines and scientific medicine lead to a reformulation of conceptions of healing? A historical survey of medical care up to the use of scientific medicine in the 19th and 20th Centuries is followed by chapters on different traditions of alternative medicine: homeopathy, chiropractic, non-medical and spiritual healing, oriental medicine and self-care. Each considers the historical roots and development of the particular alternative medicine; describes its principles and how they relate to mainstream medicine. The concluding chapter considers social policy implications and political issues.
