

political economic state of the world

political economic state of the world is a complex and dynamic subject that reflects the interplay between global political events and economic trends. Understanding this state requires analyzing various factors including international relations, economic policies, trade dynamics, and geopolitical tensions. The world economy is influenced by the decisions of powerful nations, emerging markets, and multinational corporations, all of which contribute to shaping global economic stability and growth. Additionally, challenges such as inflation, supply chain disruptions, climate change, and technological advancements significantly impact the political economic landscape. This article provides a comprehensive overview of the current political economic state of the world, examining key regional influences, global economic trends, and the implications for future development. The following sections will explore these dimensions in detail, offering insights into how political and economic forces interact on the world stage.

- Global Economic Trends Shaping the Political Economic State
- Geopolitical Influences on the World Economy
- Regional Political Economic Developments
- Challenges and Opportunities in the Political Economic Landscape
- Future Outlook for the Political Economic State of the World

Global Economic Trends Shaping the Political Economic State

The global economy is a critical component of the political economic state of the world, as it influences and is influenced by political decisions and international relations. Several key trends currently define the global economic environment, including inflationary pressures, shifting trade patterns, and technological innovation. These trends affect economic growth rates, employment levels, and the distribution of wealth among nations.

Inflation and Monetary Policy

Inflation has become a dominant issue worldwide, with many countries experiencing higher consumer prices due to supply chain disruptions and energy cost increases. Central banks have responded by tightening monetary policies, raising interest rates to curb inflation. These measures, while necessary to stabilize economies, also pose risks of slowing down economic

growth and increasing borrowing costs, which can impact investment and consumption.

Global Trade and Supply Chains

International trade remains a cornerstone of the political economic state of the world, yet it faces significant challenges. Trade tensions between major economies, such as the United States and China, have led to tariffs and restrictions that disrupt global supply chains. Additionally, the COVID-19 pandemic exposed vulnerabilities in supply networks, prompting countries and companies to diversify sources and increase resilience.

Technological Innovation and Economic Transformation

Advancements in technology, particularly in artificial intelligence, automation, and digital currencies, are transforming economies globally. These innovations drive productivity gains but also raise questions about job displacement and the need for new regulatory frameworks. The political economic state reflects these shifts, as governments balance fostering innovation with protecting social welfare.

Geopolitical Influences on the World Economy

Geopolitical developments play a significant role in shaping the political economic state of the world, with conflicts, alliances, and diplomatic relations directly affecting economic stability and growth. Political uncertainty and tensions often lead to market volatility and shifts in investment flows.

Major Power Rivalries

The rivalry between major powers, notably the United States, China, and Russia, influences global economic policies and trade patterns. These tensions manifest in areas such as technology competition, military posturing, and economic sanctions, which have far-reaching effects on international markets and economic partnerships.

Regional Conflicts and Economic Impact

Ongoing regional conflicts, including those in the Middle East, Eastern Europe, and parts of Africa, disrupt economic activities and exacerbate humanitarian crises. Such conflicts increase uncertainty, reduce investor confidence, and hinder economic development in affected regions, contributing to a more volatile global economic environment.

International Organizations and Economic Governance

Institutions such as the International Monetary Fund (IMF), World Bank, and World Trade Organization (WTO) play vital roles in managing the political economic state of the world by promoting economic cooperation, development, and stability. Their policies and interventions influence global economic trends and help address crises.

Regional Political Economic Developments

Different regions experience unique political economic conditions that collectively shape the global state. Understanding these regional dynamics is essential for a comprehensive view of the political economic state of the world.

North America

North America, led by the United States, remains a dominant economic force with significant influence on global markets. The region faces challenges such as inflation, labor market shifts, and energy transitions, while also driving technological innovation and trade policies that impact the broader world economy.

Europe

Europe grapples with political and economic challenges including energy security, post-Brexit adjustments, and managing relations with Russia and China. The European Union's efforts to deepen economic integration and address climate change are key factors in the region's political economic state.

Asia-Pacific

The Asia-Pacific region is a hotspot for economic growth and geopolitical competition. Countries like China, India, Japan, and ASEAN members are central to global supply chains and innovation. Political tensions in areas such as the South China Sea and Taiwan Strait add complexity to the region's economic outlook.

Latin America

Latin America faces economic volatility influenced by political instability, commodity price fluctuations, and social inequality. Efforts to diversify economies and improve governance are ongoing, impacting the region's role in

the global political economic landscape.

Africa

Africa presents both challenges and opportunities with its resource wealth, demographic growth, and increasing integration into the world economy. Political instability in some countries and infrastructure deficits remain hurdles for sustained economic development.

Challenges and Opportunities in the Political Economic Landscape

The political economic state of the world is marked by various challenges that threaten stability, as well as opportunities that may foster growth and cooperation. Addressing these issues requires coordinated efforts across nations and sectors.

- **Climate Change and Sustainability:** Environmental risks pose significant threats to economic productivity and political stability, necessitating green investments and international cooperation.
- **Global Inequality:** Economic disparities within and between countries contribute to social unrest and political tensions, highlighting the need for inclusive growth policies.
- **Technological Disruption:** While technology offers growth potential, it also demands new regulatory approaches to ensure fair access and mitigate risks.
- **Debt and Financial Stability:** Rising debt levels in many countries threaten economic stability and require prudent fiscal management and international support.
- **Geopolitical Risks:** Managing conflicts and fostering diplomatic relations remain critical to maintaining a stable political economic environment.

Future Outlook for the Political Economic State of the World

Looking ahead, the political economic state of the world will likely be shaped by ongoing technological advancements, shifting geopolitical alliances, and responses to global challenges such as climate change and

pandemics. Economic resilience and political stability will depend on effective governance, international cooperation, and adaptive policies. Emerging markets may play a larger role in global economic growth, while established powers navigate complex strategic relationships. The evolving landscape underscores the importance of monitoring political and economic indicators to anticipate trends and mitigate risks in the interconnected world economy.

Frequently Asked Questions

What are the key factors currently influencing the global political economy?

The key factors influencing the global political economy include geopolitical tensions, trade policies, energy prices, technological advancements, inflation rates, and the impact of the COVID-19 pandemic recovery efforts.

How is inflation impacting the political economic state of the world?

Inflation is causing increased cost of living globally, prompting governments to adjust monetary policies, leading to tighter financial conditions, reduced consumer spending, and heightened political pressure on policymakers to stabilize economies.

What role do geopolitical conflicts play in shaping the global economic landscape?

Geopolitical conflicts disrupt supply chains, increase energy prices, create uncertainty in markets, and can lead to sanctions and trade restrictions, all of which significantly shape the global economic landscape.

How are emerging markets influencing the political economic state of the world?

Emerging markets are driving global growth through increased consumption, innovation, and investment opportunities; however, they also face challenges like debt vulnerabilities and political instability that impact the broader political economic environment.

What impact does climate change have on the global political economy?

Climate change affects the global political economy by driving shifts in energy policies, creating new economic opportunities in green technology,

causing resource scarcity, and leading to regulatory changes that influence global trade and investment patterns.

How is the rise of protectionism affecting international trade and the political economy?

The rise of protectionism leads to increased tariffs, trade barriers, and reduced cooperation among nations, which can slow global economic growth, disrupt supply chains, and increase political tensions between trading partners.

What is the significance of technological innovation in the current political economic state?

Technological innovation is reshaping industries, enhancing productivity, and creating new markets, while also raising concerns about job displacement, data security, and regulatory challenges that influence political and economic policies worldwide.

How do global financial institutions influence the political economic stability of countries?

Global financial institutions like the IMF and World Bank provide funding, policy advice, and economic stabilization support, which help countries manage crises, implement reforms, and maintain economic stability, thereby affecting the broader political economic landscape.

Additional Resources

1. Capital in the Twenty-First Century

This influential book by Thomas Piketty explores wealth and income inequality over the last few centuries. Using extensive historical data, Piketty argues that the rate of capital return in developed countries is persistently higher than the rate of economic growth, leading to concentration of wealth. The book examines the implications for democracy and economic policy, advocating for progressive taxation to address inequality.

2. The Great Divide: Unequal Societies and What We Can Do About Them

Authored by Joseph E. Stiglitz, this book delves into the causes and consequences of economic inequality in modern societies. Stiglitz, a Nobel laureate economist, highlights how political decisions and economic policies have exacerbated disparities. He offers practical solutions aimed at creating fairer economic systems and reducing social tensions.

3. Globalization and Its Discontents

Joseph E. Stiglitz also wrote this critical analysis of globalization and international economic institutions like the IMF and World Bank. The book

argues that globalization, while beneficial in some ways, has often been mismanaged, leading to economic instability and increased inequality in developing countries. Stiglitz calls for reforms to ensure more inclusive and equitable global economic governance.

4. *The Rise and Fall of Nations: Forces of Change in the Post-Crisis World*

Ruchir Sharma examines the economic and political factors shaping nations' trajectories in a rapidly changing global landscape. The book provides insights into how demographics, governance, and innovation influence whether countries prosper or decline. It offers a framework for understanding the complex interplay between politics and economics in the contemporary world.

5. *Why Nations Fail: The Origins of Power, Prosperity, and Poverty*

Daron Acemoglu and James A. Robinson investigate the political and economic institutions that determine the success or failure of nations. They argue that inclusive institutions fostering participation and innovation lead to prosperity, while extractive institutions that concentrate power cause stagnation and poverty. The book combines historical case studies with economic theory to explain global disparities.

6. *The Shock Doctrine: The Rise of Disaster Capitalism*

Naomi Klein's book reveals how governments and corporations exploit crises to implement controversial economic policies. She argues that neoliberal economic reforms are often pushed through during times of shock, undermining democracy and increasing inequality. The book provides a critical perspective on the intersection of politics, economics, and corporate power.

7. *Debt: The First 5,000 Years*

David Graeber offers an anthropological and historical exploration of debt and credit systems throughout human history. He challenges conventional economic narratives by showing how debt has been intertwined with social and political structures. The book provides a broad context for understanding contemporary financial crises and the role of debt in global economics.

8. *The Global Minotaur: America, Europe and the Future of the Global Economy*

Yanis Varoufakis analyzes the post-World War II global economic system centered around the United States. He describes how the US dollar's dominance shaped international finance and how this "Minotaur" system eventually led to economic instability. The book discusses the political-economic challenges facing the world in the aftermath of the 2008 financial crisis.

9. *Global Political Economy: Understanding the International Economic Order*

By Robert Gilpin, this comprehensive text explores the interplay between politics and economics on a global scale. Gilpin discusses theories of international political economy, the roles of states, markets, and institutions, and the impact of globalization. The book serves as a foundational resource for understanding the complexities of the world economic order.

political economic state of the world: The Global Political Economy of Sex: Desire, Violence, and Insecurity in Mediterranean Nation States A. Agathangelou, 2004-10-14 At the intersection of the warmth of hearth and home and the dangers of the street lies the tenuous position of women engaged in reproductive labour, those involved in the sex trade and those in domestic positions. These are women who are vulnerable, exploited, and whose dirty work allows for the reproduction of traditional social mores and roles. Yet while they are used to sustain tradition, dialectically they reflect the hyperconnections of globalization through the migration of women, the development of placement 'agencies' that often are little but fronts for transnational crime; and the transfer of money from the developed countries to the oppressed world. This book focuses on the interaction of the global and the local through a close investigation of the political economy of desire and reproduction in three states that blur the line between developed and developing: Greece; Turkey; and Cyprus. These are countries at the crossroads, in flux, whose peripheral siting at the centre of global capitalism provides unusual insight into the dark recesses of patriarchy, paternalism and exploitation.

political economic state of the world: The Economic, Financial and Political State of Germany Since the War Peter Reinhold, 1928

political economic state of the world: Global Political Economy Robert O'Brien, Marc Williams, 2020-04-07 Offering an accessible introduction to both the historical roots and the contemporary dynamics of today's world economy, the extensively revised sixth edition of this bestselling textbook continues to lead the way in equipping students with the knowledge required to make sense of the fast-paced discipline of Global Political Economy. Illustrating the breadth of the subject, the book's authors - both highly regarded experts in the field - show how the national and international interact, while also placing an emphasis on the historical evolution of the world economy in order to appreciate the nuances of today's economic structures. The global economy is traced from the Industrial Revolution through each phase of a shifting world order to the modern day. Then follows an engaging exploration of the dynamics of today's economy, including: trade, production, finance, labour, gender, development, the environment, security and governance. This takes into account the latest developments in the global economy, from automation and the challenges posed to the labour force, to artificial intelligence and the increasing complex, global supply chains of modern transnational firms. This is the most authoritative and accessible textbook on global political economy, making it the ideal companion for students at undergraduate and postgraduate levels, on politics, international relations and related degrees. New to this Edition: - Extensively updated to feature the latest empirical developments, including rising economic nationalism, US trade wars with China, and populism. - Brand new boxed features illustrate the latest dynamics, including the impact of digital technologies, artificial intelligence and automation, and the growth and consequences of increasing inequality. - Greater coverage of the sustained threats to the liberal international order and likely future scenarios. Accompanying online resources for this title can be found at [bloomsburyonlineresources.com/global-political-economy-6e](https://www.bloomsburyonlineresources.com/global-political-economy-6e). These resources are designed to support teaching and learning when using this textbook and are available at no extra cost.

political economic state of the world: Global Political Economy John Ravenhill, 2008 An authoritative introduction to Global Political Economy. The book covers all bases: contemporary

theory, introductions to particular issue areas, and an extended debate on globalization that reflects a variety of perspectives. The book is accompanied by an Online Resource Centre. Student resources: Timeline Web links Glossary Instructor resources: Tables and figures from the book to download 2 in-depth case studies

political economic state of the world: *Global Political Economy* Ronen Palan, 2005-08-12 What are the cutting edge debates in global political economy? This book presents an invaluable overview of all the major contemporary debates and approaches at the forefront of European and North American global political economy. The book covers the following topics: * the six central concepts of global political economy: state, firm, capital, power, labour and globalisation * theories at the forefront of GPE: rational choice, neo-institutionalism, neo-Marxism, constructivism and postmodernity * recent developments in theoretical approaches such as game theory, modern rational and public choice theory, development theory, historical sociology * how global political economy is best understood in terms of three traditions of political economy: Marxism, rationalism and hermeneutics/institutionalism No other book provides such succinct summaries, by international experts in the field, of such topical and wide-ranging issues. This book represents an essential textbook, ideal for students and lecturers in International Political Economy and International Relations.

political economic state of the world: *Critical Theory and the Critique of Political Economy* Werner Bonefeld, 2014-05-08 Subversive thought is none other than the cunning of reason when confronted with a social reality in which the poor and miserable are required to sustain the illusion of fictitious wealth. Yet, this subsidy is absolutely necessary in existing society, to prevent its implosion. The critique of political economy is a thoroughly subversive business. It rejects the appearance of economic reality as a natural thing, argues that economy has not independent existence, expounds economy as political economy, and rejects as conformist rebellion those anti-capitalist perspectives that derive their rationality from the existing conceptuality of society. Subversion focuses on human conditions. Its critical subject is society unaware of itself. This book develops Marx's critique of political economy as negative theory of society. It does not conform to the patterns of the world and demands that society rid itself of all the muck of ages and founds itself anew.

political economic state of the world: *Global Political Economy* Jean Marie Chenou, Ralf J. Leiteritz, Carolina Urrego-Sandoval, 2025-03-15 Taking first the profound transformations underway in the global political economy, this pathbreaking new text redefines how we understand trade, finance, money and labour. In this new problem-based approach, the core concerns of the global economy are joined by key topics, spanning energy to development, inequalities to illicit economies, reflecting the fluid and dynamic nature of contemporary GPE scholarship. The book addresses four major transformations shaping the global political economy today: the questioning of the liberal international order, the rise of the Anthropocene, the technological advancements of the fourth industrial revolution, and the increasing significance of identity politics. These transformations are explored through a comprehensive framework that integrates diverse theoretical and methodological approaches, ensuring a nuanced understanding of real-world problems. Each chapter tackles key problems and global issues, from global energy dependency and rising inequality to the commodification of personal data and platform economies. The book also emphasises the need for a truly global perspective, integrating lenses, concepts, voices, and ideas from scholarship all round the world. This inclusive approach broadens understanding and reflects the complexity and diversity of the global landscape. By adopting the stance of hybrid GPE scholars, the authors bridge the gap between different geographical and intellectual traditions, offering a rich and varied examination of contemporary GPE. *Global Political Economy* is an essential resource, providing a fresh and relevant perspective on the field. It fosters critical discussions and debates, encouraging readers to rethink entrenched beliefs and engage with the ever-evolving landscape of global political economy.

political economic state of the world: *The Political Economy of Federalism in Nigeria*

Dele Babalola, 2018-12-29 This book uses the political economy approach to examine the relative failure of federalism in Nigeria. It shows the nexus between the political and the economic aspects of the country's federalism. The central feature of Nigeria's political economy is the relationship between oil resources and the state. The author argues that the inability of the federal government to distribute the oil wealth fairly amongst the component units contributes to the dysfunctional character of the federal system. This deficiency is rooted in the country's unbalanced political economy, which promotes over-dependency on oil and consequently an over-centralised federal system. The book concludes that despite its complexities, federalism has become the basis for the country's stability. Therefore, ethno-regional demands for 'true federalism' will continue until the political elite reform the ailing federal system.

political economic state of the world: The Journal of political economy, 1925

political economic state of the world: *Global Geopolitical Power and African Political and Economic Institutions* John James Quinn, 2015-12-30 *Global Geopolitical Power and African Political and Economic Institutions: When Elephants Fight* describes the emergence and nature of the prevailing African political and economic institutions in two periods. In the first, most countries adopted political and economic institutions that funneled significant levels of political and economic power to the political elites, usually through one- or no-party (military) political systems, inward-oriented development policies, and/ or state-led—and often state-owned—industrialization. In the second period, most countries adopted institutions that diluted the overarching political and economic power of ruling elites through the adoption of de jure multiparty electoral systems, more outward-oriented trade policies, and the privatization of many state owned or controlled sectors, though significant political and economic power remains in their hands. The choices made in each period were consistent with prevailing ideas on governance and development, the self-interests of political elites, and the perceived availability of support or autonomy vis-à-vis domestic, regional, and international sources of power at the time. This book illustrates how these two region-wide shifts in prevailing political and economic institutions and practices of Africa can be linked to two prior global geopolitical realignments: the end of WWII with the ensuing American and Soviet led bipolar system, and the end of the Cold War with American primacy. Each period featured changed or newly empowered international and regional leaders with competing national priorities within new intellectual and geopolitical climates, altering the opportunities and constraints for African leaders in instituting or maintaining particular political and economic institutions or practices. The economic and political institutions of Africa that emerged did so as a result of a complex mix of contending domestic, regional, and international forces (material and intellectual)—all which were themselves greatly transformed in the wake of these two global geopolitical realignments.

political economic state of the world: The International Political Economy of the BRICS

Li Xing, 2019-02-18 Exploring to what extent the BRICS group is a significant actor challenging the global order, this book focuses on the degree and consequence of their emergence and explores how important cooperation is to individual BRICS members' foreign policy strategies and potential relevance as leaders in regional and global governance. The BRICS countries (Brazil, Russia, India, China, South Africa) have come to play an important role on the global political scene. As a group, and as individual countries, they have taken initiatives to establish new institutions, and have engaged in yearly summits that coordinate their voice and focus on intra-BRICS cooperation. In this sense, the BRICS may be seen as a balancing coalition, and often the main opposing force to Western powers. Looking at the debate around the role of the BRICS as an actor, expert contributors also explore the international political economy (IPE) of individual BRICS countries as systemically important countries with highly asymmetrical individual power capacities. The comprehensive theoretical and empirical coverage of this timely volume will be especially useful to students, researchers and professionals interested in ongoing academic debates around the IPE of emerging powers, and those researching global governance and globalization.

political economic state of the world: *International Political Economy* Peu Ghosh, 2023-12-01

This book is a comprehensive introduction to the theories and recent debates on international

political economy (IPE). It illustrates the theoretical ideas of the discipline and provides an in-depth understanding of regional and global political economy. The book focusses on the functioning of states and the economy within the perspective of world politics. It explores the theories realism, liberalism, liberal interdependence, hegemonic stability and dependency vis-à-vis the contemporary global economic and political scenario. It provides a historical overview of the developments in the field and study of IPE, institutions such as the International Monetary Fund, World Bank and World Trade Organization; the effects of globalization; the movement of capital; and the contested relationship between human development and democracy. The book examines the effects of neoliberal policies on the functioning of states and highlights the challenges and dilemmas of prioritizing development especially for developing countries. The author also looks at regional formations like the EU, NAFTA, ASEAN, SAARC, APEC and BRICS and their contributions to political and economic cooperation and trade. The book will be useful to the students, researchers and faculty working in the fields of political economy, international relations, economics, political science and development studies.

political economic state of the world: Oil and the political economy in the Middle East Martin Beck, Thomas Richter, 2021-08-17 The downhill slide in the global price of crude oil, which started mid-2014, had major repercussions across the Middle East for net oil exporters, as well as importers closely connected to the oil-producing countries from the Gulf. Following the Arab uprisings of 2010 and 2011, the oil price decline represented a second major shock for the region in the early twenty-first century - one that has continued to impose constraints, but also provided opportunities. Offering the first comprehensive analysis of the Middle Eastern political economy in response to the 2014 oil price decline, this book connects oil market dynamics with an understanding of socio-political changes. Inspired by rentierism, the contributors present original studies on Bahrain, Egypt, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, and the United Arab Emirates. The studies reveal a large diversity of country-specific policy adjustment strategies: from the migrant workers in the Arab Gulf, who lost out in the post-2014 period but were incapable of repelling burdensome adjustment policies, to Egypt, Jordan, and Lebanon, who have never been able to fulfil the expectation that they could benefit from the 2014 oil price decline. With timely contributions on the COVID-19-induced oil price crash in 2020, this collection signifies that rentierism still prevails with regard to both empirical dynamics in the Middle East and academic discussions on its political economy.

political economic state of the world: The Jewish Forum , 1918

political economic state of the world: The Political Economy of Agro-Food Markets in China L. Augustin-Jean, B. Alpermann, 2013-11-19 China's agricultural production and food consumption have increased tremendously, leading to a complete evolution of agro-food markets. The book is divided into two parts; the first part reviews the theoretical framework for the 'social construction of the markets,' while the second part presents the implication for the agro-food markets in China.

political economic state of the world: Trade, Development, and Political Economy in East Asia Prema-Chandra Athukorala, Arianto A. Patunru, Budy P. Resosudarmo, 2014-11-14 This volume is a tribute to Professor Hal Hill, one of the most distinguished and internationally renowned Australian development economists and the single most important Australian figure in the networks that bind the Australian and Southeast Asian economics professions over the past four decades. The volume contains twelve original contributions by distinguished scholars who are at the forefront of their own subject areas. The contributions are thematically arranged into three parts to reflect Professor Hill's wide-ranging research interests: trade policy issues central to the development policy debate, structural change and global economic integration in East Asian economies, and the political economy of development policy.

political economic state of the world: *Emerging Markets and the State* Christopher Wylde, 2017-07-27 This book, through an analysis of case studies in Latin America and Southeast Asia, sets out to understand the form and function of contemporary states seeking to guide and cajole markets, hoping to stimulate economic growth and generate robust development outcomes. In the context of

contemporary globalization, and the hegemony of a neoliberal mode of capital accumulation, independent state-directed development has moved away from the reach of many emerging markets. Wylde's analysis reveals that, contrary to much of the literature espousing the 'end of the state', the role of the state in the 21st century development process continues to be of pivotal importance.

political economic state of the world: Beyond Sovietology Susan Gross Solomon, 2019-07-03 This volume - a product of the Soviet Domestic Politics workshop sponsored by the Social Science Research Council - marks an end and a new beginning. The end, of course, is that of Sovietology, now permanently overtaken by events. The beginning encompasses not only a radical multiplication of subjects for analysis - the post-Soviet states - but also the arrival of a new generation of scholars entering the field at its turning point. As the essays in this collection demonstrate, they bring fresh contemporary social scientific questions and methods to an unprecedentedly accessible universe of diverse social groups and societies once subsumed under the Soviet rubric. Their work enriches not only post-Soviet studies but the entire range of comparativist work in the social sciences. Among the authors included here are Jane Dawson, Ellen Hamilton, Joel Hellman, Mark Saroyan, Joseph Schull and Michael Smith.

political economic state of the world: The Journal of Political Economy James Laurence Laughlin, James Alfred Field, 1914

political economic state of the world: Political Economy and Global Capitalism Robert Albritton, Bob Jessop, Richard Westra, 2010 This volume brings together original and timely writings by internationally renowned scholars that reflect on the current trajectories of global capitalism and, in the light of these, consider likely, possible or desirable futures. It offers theory-informed writing that contextualizes empirical research on current world-historic events and trends with an eye towards realizing a future of human, social and economic betterment.
