However, for decades airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants, which contribute to the derailment

of economic and social activities. Thus, it is essential to determine new practices and strategies that can allow air transport management to be enriched and to flourish. *Global Air Transport Management and Reshaping Business Models for the New Era* provides a comprehensive collection of knowledge on the new era of business management on air transport. Post-financial crisis, China has emerged as the largest or second largest trading partner for most countries. It has become the second largest market for Fortune 500 companies like Starbucks, Apple, and Nike and drives growth for Hollywood and commodity products. Yet the profits come at a price for countries and companies alike—they must adhere to the political goals of Beijing or else face economic punishment or outright banishment. Using primary research from

interviews with hundreds of business executives and government officials, *The War for China's Wallet* will help companies understand how to profit from China's outbound economic plans as well as a shifting consumer base that is increasingly nationalistic.
