Setting Date and Time

Accurate date and time settings are important for proper record keeping. The manual guides users through the process of setting these parameters using the control buttons. This information is displayed alongside test results for effective monitoring over time.

Handling Test Strips

Test strips must be stored properly and used before their expiration date to maintain test accuracy. The precision xtra ketone meter manual advises keeping strips in their original container, away from moisture and extreme temperatures. Only insert a strip into the meter at the time of testing to prevent contamination.

Using the Precision Xtra Ketone Meter

Accurate testing requires adherence to the procedures outlined in the manual. This section explains how to perform blood ketone and glucose tests from start to finish, including sample collection and reading interpretation.

Preparing to Test

Wash hands with warm water and dry thoroughly to prevent contamination. Prepare the lancet device and test strip according to the instructions. Insert the test strip into the meter until it powers on automatically.

Collecting a Blood Sample

Use the lancet device to prick the side of the fingertip to obtain a small drop of blood. Gently touch the blood drop to the designated area on the test strip. The meter will detect the sample and begin analysis.

Reading and Recording Results

precision xtra ketone meter manual: *Oxygen Transport to Tissue XXX* Per Liss, Peter Hansell, Duane F. Bruley, 2008-12-04 In 1772 in Uppsala the Swedish chemist Karl Wilhelm Scheele discovered the element Oxygen. Two hundred and one years later, in 1973, the International Society on Oxygen Transport to Tissue (ISOTT) was founded. Since then there has been an annual ISOTT meeting. After 24 years of international ISOTT meetings it was decided, at the 2005 summit in Bary, Italy, that the 2007 meeting was to be held in Uppsala, Sweden. Thus, after the Louisville meeting we, in the Uppsala group, withdrew to the Edgewater Resort at Taylorsville Lake outside Louisville and prepared the Uppsala ISOTT meeting by tasting Kentucky Bourbons, smoking cigars while bathing in a jacuzzi in the hot dark Kentucky night full of fire flies and a sky full of stars. The ISOTT program should include different aspects of oxygen - however, it is accepted that each meeting has its own local “touch”. We decided to focus the Uppsala ISOTT meeting on the theme of Imaging and measuring oxygen changes. With this in mind we invited scientists within and outside the ISOTT society. We then also received lots of good abstracts from ISOTT members that were included in the program. Lars-Olof Sundelöf introduction speech “AIR AND FIRE” concerned how oxygen was discovered in Uppsala in 1772 by Karl Wilhelm Scheele. After the introduction speech a get together event took place in the magnificent and spacious foyer of Uppsala University main building. The vice chancellor Ulf Pettersson welcomed all delegates to Sweden and Uppsala.
