preschool number 12 worksheet: Parenting Hyperactive Preschoolers Elizabeth Harvey, Sharonne D. Herbert, Rebecca M. Stowe, 2015-05-04 Parenting any preschooler can be challenging, but when hyperactivity and impulsivity are extreme, parenting requires extraordinary effort and skill. Parents need tools for helping their children behave in ways that are adaptive and socially appropriate and that will prevent their children from developing additional difficulties. Children who are hyperactive are at risk for developing emotional or behavioral disorders, and research suggests that helping parents to provide firm and consistent limits in a nurturing environment can significantly reduce hyperactivity and associated difficulties. *Parenting Hyperactive Preschoolers* provides a 14-week parent training and emotion socialization program that aims to help preschoolers who have symptoms of ADHD by teaching parents new ways of interacting with their children. This clinician's manual outlines each session and includes homework forms and handouts for parents and children. The treatment includes behavior management strategies that have been demonstrated to be effective for children with behavior problems and tailors these strategies to the specific needs of hyperactive preschoolers. Because children with ADHD have substantial difficulties with emotion regulation, this as an important component of the treatment protocol. The program is designed to be conducted in a group setting in 90 minute sessions, which also allows parents to receive support and input from each other, but can be easily adapted to sessions with individual parents.

preschool number 12 worksheet: Handbook of Research on Using Educational Robotics to Facilitate Student Learning Papadakis, Stamatios, Kalogiannakis, Michail, 2020-12-05 Over the last few years, increasing attention has been focused on the development of children's acquisition of 21st-century skills and digital competences. Consequently, many education scholars have argued that teaching technology to young children is vital in keeping up with 21st-century employment patterns. Technologies, such as those that involve robotics or coding apps, come at a time when the demand for computing jobs around the globe is at an all-time high while its supply is at an all-time

low. There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking, algorithmic thinking, and project management. Additionally, recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering. The Handbook of Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps. The book argues that while learning about computing, young people should also have opportunities to create with computing, which have a direct impact on their lives and their communities. It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action: (1) computational identity, which shows the importance of young people's development of scientific identity for future STEM growth; and (2) digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways. Covering subthemes including student competency and assessment, programming education, and teacher and mentor development, this book is ideal for teachers, instructional designers, educational technology developers, school administrators, academicians, researchers, and students.
