primary psychology of central florida: **Human Factors Issues in Combat Identification** Robert Herz, Dee Andrews, Mark Wolf, 2017-09-29 This edited book presents an array of approaches on how human factors theory and research addresses the challenges associated with combat identification. Special emphasis is placed on reducing human error that leads to fratricide, which is the unintentional death or injury of friendly personnel by friendly weapons during an enemy engagement. Although fratricide has been a concern since humans first engaged in combat operations, it gained prominence during the Persian Gulf War. To reduce fratricide, advances in

technological approaches to enhance combat identification (e.g., Blue Force Tracker) should be coupled with the application of human factors principles to reduce human error. The book brings together a diverse group of authors from academic and military researchers to government contractors and commercial developers to provide a single volume with broad appeal. The second half of the book provides chapters illustrating new views of organizational constructs but from the perspectives of more established researchers in the field. All chapters share a common theme of attempting to provide new ways of viewing organizations and organizational behavior. Each chapter is based on the premise that, when presented with problems that seem impossible to solve, often the best results are achieved by finding new perspectives on the basic constructs being studied. These new perspectives provide insights which illuminate the problems for the theory of organizations as well as improving the ability of organizational members to solve practical organizational problems.

primary psychology of central florida: **Discrimination at Work** Robert L. Dipboye, Adrienne Colella, 2013-06-17 This volume brings together top scholars in industrial and organizational psychology with social psychologists to explore the research and theory relating to various areas of workplace discrimination. Many of the contributors to this book participated in a conference on workplace discrimination held at Rice University in May 2000. The idea came from the realization that there had been no attempt to bring together the various literatures on the topic. Discrimination and issues of employment diversity are significant topics today in IO psychology, business, and human resource management. This edited volume examines the following components of this important discussion: how to explain discrimination in organizations; understanding discrimination against specific groups; and implications for practical efforts to reduce discrimination. This book brings together, in one volume, a review of the research on discrimination based on race, age, sexual orientation, gender, physical appearance, disability, and personality. In addition, it explores the multilevel antecedents and potential bases for a general model of discrimination in the workplace. While social psychological research and theory have provided invaluable insights, an understanding of discrimination in the workplace and solutions will require incorporating factors at the organizational level in addition to factors at the individual and group levels. Although a definitive model is not reached, the aim of this text is to facilitate future research and theory.
