The Ten Principles of Economics

A core feature of Mankiw's work is the articulation of ten guiding principles that summarize the essence of economic thinking. These principles are divided into three categories: how people make decisions, how people interact, and how the economy as a whole works. They serve as a conceptual framework for analyzing economic issues and policies, emphasizing efficiency, incentives, trade-offs, and market functioning.

Principles on Individual Decision-Making

The first four principles focus on individual choices and include concepts such as trade-offs, opportunity cost, rational behavior, and incentives. They highlight the importance of considering what must be given up when making decisions and the role of incentives in shaping behavior.

Principles on Interaction Among People

Principles five through seven address interactions between individuals and groups. They explore how trade can benefit all parties, how markets tend to organize economic activity efficiently, and how governments can sometimes improve market outcomes through intervention.

Principles on Economy-Wide Interactions

The final three principles examine macroeconomic phenomena, including the role of productivity in determining living standards, the relationship between inflation and unemployment, and the influence of monetary policy on the economy.
