support de communication digital: *The Sustainable City XIV* G. Passerini, S. Ricci, 2020-12 Urban areas result in a series of environmental challenges varying from the consumption of natural resources and the subsequent generation of waste and pollution, contributing to the development of social and economic imbalances. As cities continue to grow all over the world, these problems tend to become more acute and require the development of new solutions. The challenge of planning sustainable contemporary cities lies in considering the dynamics of urban systems, exchange of energy and matter, and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems. The task of researchers, aware of the complexity of the contemporary city, is to improve the capacity to manage human activities, pursuing welfare and prosperity in the urban environment. Any investigation or planning for a city ought to consider the relationships between the parts and their connections with the living world. The dynamics of its networks (flows of energy-matter, people, goods, information and other resources) are fundamental for an understanding of the evolving nature of today's cities. Large cities are probably the most complex mechanisms to manage. They represent a fertile ground for architects, engineers, city planners, social and political scientists, and other professionals able to conceive new ideas and time them according to technological advances and human requirements. Papers presented at the 14th International Conference on Urban Regeneration and Sustainability address the multidisciplinary components of urban planning, the challenges presented by the increasing size of cities, the number of resources required and the complexity of modern society. Various aspects of the urban environment are covered and a focus is placed on providing solutions which lead towards sustainability.

support de communication digital: *De Gruyter Handbook of Coopetition* James M. Crick, 2025-05-19 While plenty of research has been undertaken on coopetition – the practice of organisations (of different sizes) collaborating with their competitors in informal and/or formal capacities – the wider business community is still learning about how and why companies join forces with their competitors, as well as the benefits and drawbacks of these strategies. The De Gruyter

Handbook of Coopetition is designed to showcase some novel studies about the ways that coopetition activities are managed by businesses (using a variety of contexts and research methods), the advantages of these strategies, and insights about what can go wrong when competing firms collaborate with one another. The contributors address certain under-researched issues, such as how coopetition operates in internationally oriented arenas (e.g., for exporters), the dark-side of coopetition strategies, measuring the coopetition construct in empirical research, methodological factors for investigating coopetition activities, and much more. This handbook will benefit academics, postgraduate researchers, students, and practitioners that are interested in the interplay between cooperation and competition.

Informal adaptation strategies developed by civil society play an important role as well. To illustrate this, the book brings together a variety of theoretical perspectives, case studies and policy lessons from both urban and rural areas. Gert-Jan Hospers is researcher at the University of Twente and Radboud University, the Netherlands. Josefina Syssner is researcher at the Centre for Municipality Studies at Linköping University, Sweden.

support de communication digital: De Gruyter Handbook of Citizens' Assemblies Min Reuchamps, Julien Vrydagh, Yanina Welp, 2023-05-31 Citizens' Assemblies (CAs) are flourishing around the world. Quite often composed of randomly selected citizens, CAs, arguably, come as a possible answer to contemporary democratic challenges. Democracies worldwide are indeed confronted with a series of disruptive phenomena such as a widespread perception of distrust and growing polarization as well as low performance. Many actors seek to reinvigorate democracy with citizen participation and deliberation. CAs are expected to have the potential to meet this twofold objective. But, despite deliberative and inclusive qualities of CAs, many questions remain open. The increasing popularity of CAs call for a holistic reflection and evaluation on their origins, current uses and future directions. The De Gruyter Handbook of Citizens' Assemblies showcases the state of the art around the study of CAs and opens novel perspectives informed by multidisciplinary research and renewed thinking about deliberative participatory processes. It discusses the latest theoretical, empirical, and methodological scientific developments on CAs and offers a unique resource for scholars, decision-makers, practitioners, and curious citizens to better understand the qualities, purposes, promises but also pitfalls of CAs.

support de communication digital: State Aid for Newspapers Paul Murschetz, 2014-01-25 Ever since newspaper companies first turned to their governments for support in the 1950s, print media has been supported by state aid in many parts of the world. Today, the principles and practicalities of these subsidies have been called into question, endangering the secure funding of expensive high-quality press output. This book provides a comprehensive analysis of today's global challenges in the print news media's struggle for survival. It presents current practices concerning government subsidies to newspapers for political, economic, and socio-cultural purposes against the background of declining readership and revenues, increased inter-media competition, austerity budgets imposed on national economies and shifting audience tastes. Using the insights of theoretical debates in the fields of media economics, media governance, and modern management theory, the book analyses these issues by investigating the power of government subsidies to shape and control newspaper markets. It brings together experts in these fields to combine theory with industry practices, aiming to help all parties involved to understand the complexity of issues and requirements necessary to preserve the social benefits of print media.
