History and Mission of Susan Love Research Foundation

Foundation Origins and Vision

The susan love research foundation was established in 1993 by Dr. Susan Love, a renowned breast cancer surgeon and advocate. The foundation was created to address the gaps in breast cancer research and to foster innovative scientific approaches that could lead to better prevention, diagnosis, and treatment. Its founding mission is to eradicate breast cancer by supporting cutting-edge research and promoting education that empowers patients and healthcare providers.

Core Mission and Goals

The core mission of the susan love research foundation centers around three primary goals: advancing breast cancer research, educating the public and medical community about breast health, and advocating for policies that support breast cancer awareness and funding. The foundation emphasizes collaboration across disciplines to accelerate discoveries and improve patient outcomes. By focusing on the biology of the breast and the mechanisms of cancer development, the foundation aims to transform breast cancer care globally.

Groundbreaking Research Initiatives

The Breast Cancer Stem Cell Program

One of the flagship research efforts of the susan love research foundation is its Breast Cancer Stem Cell Program, which investigates the role of stem cells in the initiation and progression of breast cancer. This program aims to identify the cellular origins of breast tumors to develop targeted therapies that can prevent recurrence and metastasis. The program utilizes advanced laboratory techniques and clinical trials to translate findings into practical treatments.

The Dr. Susan Love Research Foundation's IBC Program

The foundation also focuses on Inflammatory Breast Cancer (IBC), a rare and aggressive form of the disease. Its dedicated IBC program supports research to better understand this subtype, improve diagnostic methods, and develop more effective therapies. The program's multidisciplinary approach includes partnerships with leading cancer centers and patient advocacy groups.

Innovative Technologies and Methodologies

The susan love research foundation invests in innovative technologies such as genomic sequencing, 3D breast tissue modeling, and bioinformatics to enhance research capabilities. These methodologies allow scientists to study breast cancer at the molecular level, improving the accuracy of diagnosis and the precision of treatment strategies. The foundation's commitment to innovation ensures continuous progress in breast cancer research.

Educational Programs and Resources

Patient Education and Awareness

Education is a critical component of the susan love research foundation's work. The organization provides comprehensive resources aimed at educating patients, survivors, and the general public about breast health, risk factors, and the latest advances in breast cancer treatment. These resources include informative publications, webinars, and community outreach programs designed to increase awareness and encourage proactive health measures.

Professional Training and Development

The foundation also offers educational opportunities for medical professionals, including workshops, seminars, and continuing education courses. These programs focus on the latest research findings, novel diagnostic techniques, and emerging therapies in breast cancer care. By equipping healthcare providers with current knowledge, the foundation helps improve patient management and outcomes.

Online Tools and Resources

To reach a broader audience, the susan love research foundation maintains an extensive online platform featuring informational articles, research updates, and interactive tools. These digital resources empower individuals to learn about breast cancer risk assessment, genetic factors, and lifestyle interventions that can reduce the likelihood of developing the disease.

Community Engagement and Advocacy

Public Awareness Campaigns

The susan love research foundation actively participates in public awareness campaigns aimed at increasing breast cancer knowledge and promoting early detection. These initiatives include national events during Breast Cancer Awareness Month, social media outreach, and partnerships with community organizations to disseminate vital information.

Advocacy for Research Funding and Policy Change

Advocating for increased federal and private funding for breast cancer research is a key focus of the foundation. It works with policymakers and other stakeholders to influence legislation that supports cancer research, patient rights, and access to quality care. Through advocacy efforts, the foundation contributes to shaping a healthcare environment conducive to scientific advancement and patient support.

Support Networks and Survivor Programs

The foundation fosters a strong community by supporting breast cancer survivors and their families through support groups, mentorship programs, and survivor networks. These programs provide emotional support, practical advice, and opportunities to participate in research studies, thereby enhancing the overall well-being of those affected by breast cancer.

Supporting the Foundation: Donations and Volunteering

Ways to Donate

Financial contributions are essential for sustaining the susan love research foundation's research and educational activities. Donors can support the foundation through one-time gifts, monthly donations, corporate sponsorships, and planned giving. Each donation directly funds groundbreaking research projects and community programs aimed at defeating breast cancer.

Volunteer Opportunities

The foundation offers various volunteer opportunities for individuals interested in supporting its mission. Volunteers can participate in event planning, community outreach, fundraising activities, and educational program assistance. Volunteering provides a meaningful way to contribute to breast cancer research and awareness efforts.

Fundraising Events

Throughout the year, the susan love research foundation organizes fundraising events such as galas, charity walks, and auctions. These events not only raise vital funds but also increase public engagement and awareness. Participating in or sponsoring these events allows supporters to actively contribute to the foundation's goals.

- One-time donations

susan love research foundation: *Dr. Susan Love's Breast Book* Susan M. Love, 2015-09-08
The Bible for women with breast cancer --New York Times For more than two decades, readers faced with a diagnosis of breast cancer have relied on Dr. Susan Love's Breast Book to guide them through the frightening thicket of research and opinion to find the best options for their particular situations. This sixth edition explains advances in targeted treatments, hormonal therapies, safer chemotherapy, and immunologic approaches as well as new forms of surgery and radiation. There is extensive guidance for the many women now living for years with metastatic breast cancer. With Dr. Love's warm support, readers can sort the facts from the fads, ask the right questions, and recognize when a second opinion might be wise.

susan love research foundation: *Dr. Susan Love's Menopause and Hormone Book* Susan M. Love, MD, Karen Lindsey, 2003-01-21 In the first edition of this important bestselling book, praised by Newsday as "the bible for a whole generation of menopausal women," renowned physician and pioneering women's health advocate Dr. Susan Love warned about the potential dangers of the long-term prescription of hormone replacement therapy. Her insightful words of caution have been backed up by the stunning results of the recent studies on hormone replacement. In this revised edition, Dr. Love offers a remarkably clear set of guidelines as to what the studies have shown about the risks regarding heart disease, breast cancer, stroke, and other conditions, and what effect hormone therapy has on osteoporosis. She offers definitive expert advice about whether or not to go on hormone replacement therapy and, if so, for how long, as well as how to taper off hormones; and she introduces the alternative methods for treating the symptoms of menopause. Dr. Love stresses that menopause is not a disease that needs to be cured—it is a natural life stage, and every woman ought to choose her own mix of options for coping with symptoms. A questionnaire about your own health history and life preferences helps you develop a program that will best fit your unique needs. With clarity and compassion, she walks you through every option for both the short and the long term, including: • lifestyle changes (diet, exercise, and stress management) • alternative therapies (including herbs and homeopathic remedies) • available medications other than hormones

susan love research foundation: *Dr. Susan Love's Breast Book* Susan M. Love, 2023-10-03
The Bible (New York Times) and the seminal work (LA Times) offering the most authoritative guidance through all stages of breast cancer diagnosis and recovery, fully revised and updated. While the amount of information regarding a breast cancer diagnosis is vaster than ever, online and off, what continues to be missing is the explanation behind the options. Most of the data online on medical sites is generic and often comes from the same source. Then there are the patient sites as well as many social media outlets that provide peer to peer support and information. This is important for emotional support but still leaves out the full range of options and the reasons for them. The Breast Book is where people go for a deeper understanding of how to make the best

possible choices for their particular situations. Now in its seventh edition, the Breast Book has been fully revised to incorporate all the most recent developments in prevention, treatments and research. This new edition covers: New treatments: including new drugs, vaccines, hormonal treatment and drugs with longer duration (10 years) for the estrogen positive tumors The increasing focus on where cells live, both locally (immune system, hormones, etc.) and systemically (stress, etc.) Prevention: several new drugs have been added to the list of chemoprevention drugs. In addition, preventative surgery has received increased attention. Increased data on alternative approaches such as stress reduction and exercise in reducing recurrence. Increased understanding of the immune system and how it either controls or promotes the cancer. Risks for survivors Genetics Special groups: Men with breast cancer are demanding a louder voice in the conversation and research.

susan love research foundation: *American Women of Science since 1900* Tiffany K. Wayne, 2010-10-11 A comprehensive examination of American women scientists across the sciences throughout the 20th century, providing a rich historical context for understanding their achievements and the way they changed the practice of science. Much more than a Who's Who, this exhaustive two-volume encyclopedia examines the significant achievements of 20th century American women across the sciences in light of the historical and cultural factors that affected their education, employment, and research opportunities. With coverage that includes a number of scientists working today, the encyclopedia shows just how much the sciences have evolved as a professional option for women, from the dawn of the 20th century to the present. *American Women of Science since 1900* focuses on 500 of the 20th century's most notable American women scientists—many overlooked, undervalued, or simply not well known. In addition, it offers individual features on 50 different scientific disciplines (Women in Astronomy, etc.), as well as essays on balancing career and family, girls and science education, and other sociocultural topics. Readers will encounter some extraordinary scientific minds at work, getting a sense of the obstacles they faced as the scientific community faced the questions of feminism and gender confronting the nation as a whole.

susan love research foundation: *Top Screwups Doctors Make and How to Avoid Them* Joe Graedon, Teresa Graedon, 2012-09-11 A primary care doctor is skeptical of his patient's

concerns. A hospital nurse or intern is unaware of a drug's potential side effects. A physician makes the most "common" diagnosis while overlooking the signs of a rarer and more serious illness, and the patient doesn't see the necessary specialist until it's too late. A pharmacist dispenses the wrong drug and a patient dies as a result. Sadly, these kinds of mistakes happen all the time. Each year, 6.1 million Americans are harmed by diagnostic mistakes, drug disasters, and medical treatments. A decade ago, the Institute of Medicine estimated that up to 98,000 people died in hospitals each year from preventable medical errors. And new research from the University of Utah, HealthGrades of Denver, and elsewhere suggests the toll is much higher. Patient advocates and bestselling authors Joe and Teresa Graedon came face-to-face with the tragic consequences of doctors' screwups when Joe's mother died in Duke Hospital—one of the best in the world—due to a disastrous series of entirely preventable errors. In *Top Screwups Doctors Make and How to Avoid Them*, the Graedons expose the most common medical mistakes, from doctor's offices and hospitals to the pharmacy counters and nursing homes. Patients across the country shared their riveting horror stories, and doctors recounted the disastrous—and sometimes deadly—consequences of their colleagues' oversights and errors. While many patients feel vulnerable and dependent on their health care providers, this book is a startling wake-up call to how wrong doctors can be. The good news is that we can protect ourselves, and our loved ones, by being educated and vigilant medical consumers. The Graedons give patients the specific, practical steps they need to take to ensure their safety: the questions to ask a specialist before getting a final diagnosis, tips for promoting good communication with your doctor, presurgery checklists, how to avoid deadly drug interactions, and much more. Whether you're sick or healthy, young or old, a parent of a young child, or caring for an elderly loved one, *Top Screwups Doctors Make and How to Avoid Them* is an eye-opening look at the medical mistakes that can truly affect any of us—and an empowering guide that explains what we can do about it.

susan love research foundation: The Green Solution to Breast Cancer Kristen Abatsis McHenry Ph.D., 2015-09-22 This unique, research-based investigation of the U.S. breast cancer movement compares the pink and green efforts within the movement and documents their use of similar citizen-science alliances, despite the contention over the use of consumer-based activism and pink products. Breast cancer activism is one of the most flourishing research and health advocacy movements in U.S. history. Yet the incidence of breast cancer is continuing to increase. This critical and revealing text investigates breast cancer activism in its two forms—the pink movement that focuses on developing awareness of, coping with, and managing breast cancer; and the green movement that strives to determine the possible environmental causes of breast cancer—such as pesticides, chemicals, and water and air pollution—and thereby hopes to prevent breast cancer. What caused this new green movement to develop? Will it replace or merge with the pink movement? Does either approach offer more promise for a solution? And how do the two movements differ in their positions or methodology towards a similar goal? With information culled from interviews with more than 50 industry stakeholders, *The Green Solution to Breast Cancer: A Promise for Prevention* argues that key attributes such as strategy, mission, and branding have led to a greater convergence between the pink and green wings of the movement and presents information that enables readers to consider if either approach might be the shorter route to beating breast cancer.

When Karla Antoinette Baptiste was first diagnosed, she began reading breast cancer memoirs but was always left wondering what happened next. What should I expect after treatment? What will my “new normal” be like? Her own story answers those questions and so much more. Written with humor and humility, Karla’s story is woven with themes of love, trust, and spiritual faith—and the importance of becoming a force in breast cancer advocacy. It offers valuable information and resources for breast health, and provides support, inspiration, and hope for those facing breast cancer. From her adventures in Paris to her roller-coaster relationship with her ex-husband, Karla’s memoir is more than radiation and chemotherapy. In *Dig in Your Heels*, she urges women to educate themselves and draw upon their inner strength—the best is yet to come!

susan love research foundation: The Cancer Solution Jack C. Westman, 2015-01-15 This book should be read as a requirement for anyone diagnosed with cancer. It will serve as a tremendous practical guide for cancer patients and their families. Thomas N. Seyfried, Professor of biology at Boston College and author of *Cancer as a Metabolic Disease: On the Origin, Management, and Prevention of Cancer*. This book is a must read for every adult as cancer remains our greatest enemy. If you have experience with cancer, via a family member or friend, once you start reading this book, it will be hard to put down. Peter L. Pedersen, Professor of Biological Chemistry & Oncology, Johns Hopkins University. Dr. Westmans personal experience with cancer led him to extensively research the state of cancer care. Strengthening the bodys own immune system to prevent and control cancer has shown very promising results, but it is largely ignored by mainstream cancer research and treatment. If you care about winning the war on cancer, this book will motivate you to advocate for more funding for this line of research. Stephen L. Swanson, Past Chair of the Board of Directors of the American Cancer Society Dr. Westmans book is amazing, creative, innovative, different, stimulating and outstanding. Bharat B. susan love research foundation: Fact or Fiction Scientific American Editors, 2013-07-29 *Fact or Fiction: Science Tackles 58 Popular Myths* by the Editors of Scientific American Did NASA really spend millions creating a pen that would write in space? Is chocolate poisonous to dogs? Does stress cause gray hair? These questions are just a sample of the urban lore investigated in this eBook, *Fact or Fiction: Science Tackles 58 Popular Myths*. Drawing from Scientific American's *Fact or Fiction* and *Strange But True* columns, we've selected 58 of the most surprising, fascinating, useful and just plain wacky topics confronted by our writers over the years. Each brief article uncovers the truth behind everyday mythology, starting with Section One, *In the Animal Kingdom*, where we examine some of the more outlandish claims about our fellow earthly inhabitants, such as whether elephants really remember everything and whether a cockroach can live without its head. Other sections cover reproduction, the environment, technology and personal and mental health. While the answers to some questions, such as whether toilets really do flush in the opposite direction south of the Equator, may only serve to raise your Trivial Pursuit knowledge, others, such as whether to pee on a jellyfish sting or wake a sleepwalker, may come in handy. Although this eBook represents a fraction of circulating folk wisdom and urban mythology, we hope that it's an enjoyable fraction and that it encourages you to do some debunking yourself.

susan love research foundation: Integrative Women's Health Victoria Maizes, Tieraona Low Dog, 2010-02-26 Women have made it clear that they desire a broader, integrative approach to their care. Here, for the first time, *Integrative Women's Health* weaves together the best of conventional treatments with mind-body interventions, nutritional strategies, herbal therapies, dietary supplements, acupuncture, and manual medicine, providing clinicians with a roadmap for practicing comprehensive integrative care. Presenting the best evidence in a concise, accessible format, and written exclusively by female clinicians, this text addresses many aspects of women's health, including feminine perspectives on aging, spirituality and sexuality, specific recommendations for the treatment of cardiovascular disease, rheumatoid arthritis, HIV, headaches, multiple sclerosis, depression, anxiety, and cancer, as well as integrative approaches to

premenstrual syndrome, pregnancy, menopause, fibroids, and endometriosis. Homeopathic, Ayurvedic and traditional Chinese medicine practitioners provide insight into the ways in which these systems manage reproductive conditions. As leading educators in integrative medicine, editors Dr. Maizes and Dr. Low Dog demonstrate how clinicians can implement their recommendations in practice, but they also go beyond practical care to examine how to motivate patients, enhance a health history, and understand the spiritual dimensions of healing.

susan love research foundation: *Breast Cancer* Tibor Tot, 2010-11-26 The theory of the sick lobe states that breast carcinoma is a lobar disease developing most often within a single lobe,

meaning that, at an early stage, breast carcinoma occupies a limited, anatomically well-defined portion of the breast. This theory unites observed patterns from the genetic, developmental and morphological perspectives, into an overall concept. Breast Cancer: A Lobar Disease, presents this hypothesis and its consequences. The body of evidence, pro and contra, generated in recent years will be presented in this volume. The chapters, all authored by leading experts in their respective areas, gather evidence from the perspectives of epidemiology, genetics, radiology, anatomy, developmental biology, morphology, endoscopy, ultrasound and therapeutics to give the reader a full picture of recent developments regarding the sick lobe hypothesis. Tibor Tot, MD PhD is Head of the Pathology and Clinical Cytology Department at the Central Hospital of Falun, in Sweden; breast cancer expert of the National Board of Health and Welfare in Sweden; and regular Course Director of the breast pathology program, the official educational program for Swedish residents in clinical pathology, oncology, radiology and surgery.
