But the authors of this monothematic monograph tried to describe achievements in their areas. In particular, the use of AI allows you to save energy and fuel when using vehicles, improve the preparation and implementation of transport processes, simplify warehouse operations, analyze and modernize existing transport infrastructure. These and other aspects of the use of AI in the transport industry are discussed in the monograph by specialists from Greece, China, Poland and other countries. This book can be recommended for study by scientists and professionals. It can also be selected by teachers as additional material when preparing relevant courses. Moreover, it can also be recommended for any readers seriously interested in the transportation industry.
