Overview of Swedish Sleep Medicine Redmond

Swedish Sleep Medicine Redmond is a dedicated sleep center providing expert evaluation and management of sleep disorders. Located in Redmond, Washington, this center is part of the larger Swedish Health Services network, known for its commitment to quality healthcare. The facility combines state-of-the-art technology with a multidisciplinary team approach to address complex sleep issues. Patients have access to board-certified sleep physicians, respiratory therapists, and sleep technologists who work collaboratively to deliver personalized treatment plans. The center emphasizes patient education and continuous care to ensure long-term success in treating sleep conditions.

Mission and Goals

The mission of Swedish Sleep Medicine Redmond is to enhance the health and quality of life of patients through comprehensive sleep disorder diagnosis and treatment. Goals include accurate identification of sleep-related problems, effective symptom management, and promotion of healthy sleep hygiene practices. The center strives to stay at the forefront of sleep medicine research and technology to provide the best possible patient outcomes.

Facilities and Technology

Swedish Sleep Medicine Redmond is equipped with advanced diagnostic tools such as polysomnography (sleep studies), multiple sleep latency tests, and home sleep apnea testing devices. These technologies allow for detailed monitoring of brain activity, breathing patterns, oxygen levels, and other physiological parameters during sleep. The modern facilities ensure a comfortable environment for overnight studies and follow-up visits.

Diagnostic Services Offered

Accurate diagnosis is essential to effective treatment of sleep disorders. Swedish Sleep Medicine Redmond offers a comprehensive range of diagnostic services tailored to identify various sleep conditions. These services include in-lab sleep studies, home-based testing, and clinical assessments conducted by experienced specialists.

Polysomnography (PSG)

Polysomnography is the gold standard diagnostic test conducted in a sleep laboratory setting. It records brain waves, eye movements, muscle activity, heart rhythm, airflow, and blood oxygen levels throughout the sleep cycle. This test helps diagnose obstructive sleep apnea, central sleep apnea, periodic limb movement disorder, and other sleep disorders.

Home Sleep Apnea Testing (HSAT)

For patients suspected of having obstructive sleep apnea, Swedish Sleep Medicine Redmond provides home sleep apnea testing. This convenient option allows patients to be evaluated in their own bed using portable monitoring devices. It tracks breathing patterns, oxygen saturation, and heart rate, offering an accessible alternative to in-lab studies for appropriate candidates.

Multiple Sleep Latency Test (MSLT)

The MSLT measures daytime sleepiness by assessing how quickly a person falls asleep in a quiet environment during scheduled nap opportunities. It is particularly useful for diagnosing narcolepsy and idiopathic hypersomnia. This test is typically conducted following an overnight polysomnography.

Treatment Options for Sleep Disorders

Swedish Sleep Medicine Redmond provides a variety of evidence-based treatments designed to address specific sleep disorders. Treatment plans are individualized based on diagnostic findings, patient preferences, and overall health status.

Continuous Positive Airway Pressure (CPAP) Therapy

CPAP therapy is the frontline treatment for obstructive sleep apnea. It delivers a steady stream of air through a mask to keep the airway open during sleep, preventing apneas and improving oxygenation. Swedish Sleep Medicine Redmond offers comprehensive CPAP titration studies and patient education to ensure optimal adherence and effectiveness.

Oral Appliance Therapy

For patients with mild to moderate obstructive sleep apnea or those who cannot tolerate CPAP, oral appliances may be recommended. These devices reposition the jaw and tongue to maintain airway patency. The center collaborates with dental specialists to provide custom-fit oral appliances.

Cognitive Behavioral Therapy for Insomnia (CBT-I)

CBT-I is a non-pharmacological treatment aimed at changing thoughts and behaviors that contribute to chronic insomnia. This therapy includes sleep restriction, stimulus control, relaxation techniques, and cognitive restructuring. Swedish Sleep Medicine Redmond offers CBT-I through trained therapists to help patients achieve restorative sleep without medication.

Medication Management

In certain cases, pharmacological interventions may be necessary to manage sleep disorders such as restless leg syndrome, narcolepsy, or severe insomnia. The center's sleep specialists carefully evaluate the risks and benefits of medications and monitor patients closely to ensure safety and efficacy.

Patient Care and Support

Swedish Sleep Medicine Redmond prioritizes comprehensive patient care that extends beyond diagnosis and treatment. The center provides ongoing support, education, and follow-up to maximize treatment success and improve quality of life.

Patient Education

Educating patients about their specific sleep disorders and treatment options is a critical component of care. Swedish Sleep Medicine Redmond offers resources and counseling to empower patients to manage their conditions effectively. Topics include sleep hygiene, lifestyle modifications, and adherence strategies for therapies like CPAP.

Follow-Up and Monitoring

Regular follow-up appointments allow sleep specialists to assess treatment effectiveness, address

concerns, and make necessary adjustments. Continuous monitoring of therapy adherence and symptom improvement ensures personalized and adaptive care.

Multidisciplinary Approach

The center incorporates a team of healthcare professionals including pulmonologists, neurologists, psychologists, and respiratory therapists. This multidisciplinary approach enables comprehensive evaluation and management of complex sleep disorders.

Importance of Sleep Health

Good sleep health is fundamental to overall physical and mental wellbeing. Swedish Sleep Medicine Redmond emphasizes the critical role of restorative sleep in preventing chronic diseases, enhancing cognitive function, and improving mood.

Impact of Sleep Disorders

Untreated sleep disorders can lead to serious health consequences such as cardiovascular disease, diabetes, depression, and impaired daytime functioning. Recognizing and treating these conditions promptly reduces risks and enhances quality of life.

Promoting Healthy Sleep Habits

In addition to clinical treatments, Swedish Sleep Medicine Redmond advocates for healthy sleep habits that support long-term wellness. These include maintaining a consistent sleep schedule, creating a restful sleep environment, limiting caffeine and screen time before bed, and managing stress effectively.

Community Outreach and Awareness

The center participates in community education initiatives aimed at raising awareness about the importance of sleep and available treatment options. These efforts help reduce stigma and encourage individuals to seek professional help for sleep problems.

- Comprehensive diagnostic testing to identify sleep disorders
- Personalized treatment plans including CPAP, oral appliances, and CBT-I
- Ongoing patient education and multidisciplinary support
- Focus on promoting overall sleep health and wellness
- Utilization of advanced sleep technology for accurate evaluation

swedish sleep medicine redmond: **Nutritional and Therapeutic Interventions for Diabetes and Metabolic Syndrome** Debasis Bagchi, Sreejayan Nair, 2012-01-31 Diabetes mellitus affects approximately 20 million people in the US, or nearly 7% of the population. It is expected to increase by 70% within the next 25 years, and numerous epidemiologic studies have demonstrated that type 2 diabetes increases the risk of cardiovascular morbidity and mortality. It is estimated to cost over \$92 billion in health care costs and lost productivity. The increased risk is due to the detrimental vascular effects of prolonged exposure to a hyperglycemic, oxidant-rich environment yielding associated cardiovascular risk factors: atherosclerosis, hypertension and clotting abnormalities. Hypertension and dyslipidemia in diabetic patients produces substantial decreases in cardiovascular and microvascular diseases. *Nutritional and Therapeutic Interventions for Diabetes and Metabolic Syndrome* provides an overview of the current epidemic, outlines the consequences of this crisis and lays out strategies to forestall and prevent diabetes, obesity and other intricate issues of metabolic syndrome. The contributing experts from around the world give this book relevant and up-to-date global approaches to the critical consequences of metabolic syndrome and make it an important reference for those working with the treatment, evaluation or public health planning for the effects of metabolic syndrome and diabetes. Scientific discussion of the epidemiology and pathophysiology of the relationship between diabetes and metabolic syndrome Includes coverage of Pre-diabetes conditions plus both Type I and Type II Diabetes Presents both prevention and treatment options

swedish sleep medicine redmond: *The Handbook of Fatigue Management in Transportation* Christina M. Rudin-Brown, Ashleigh J. Filtress, 2023-08-02 In the world of transportation, fatigue is a silent killer that can affect us all. Understanding fatigue, including how to manage it to minimize safety risk, is of great importance. However, while it is one thing to recognize that fatigue is a critical safety issue, it is quite another to set up a successful, scientifically informed fatigue risk management programme. This book is here to help. It has been carefully designed as a comprehensive reference point, bringing together international expertise from leaders in fatigue science, and showcasing valuable insights from transportation industry practitioners. The 40 authored chapters are divided into six sections, to better understand fatigue science, the consequences of fatigue in transportation, contributors to fatigue, managing fatigue and promoting alertness, real world case studies of fatigue management in practice, and future perspectives. While it is possible to read each chapter in isolation, most will be gained by reading the book as a whole. Each chapter starts with an abstract overview and concludes with summary bullet points, creating a handy quick check for key points. This accessible text is for those who are interested in supporting alert and safe transportation operations. It is suitable for professionals, transport managers, government advisors, policy makers, students, academics, and anyone who wants to learn more. All transport modes (road, rail, maritime and aviation) are considered. For anyone waking up to the complex challenge of fatigue management, this handbook is a must.

swedish sleep medicine redmond: *Falls in Older Adults: Prevention and Risk Evaluation* Tzvi Dwolatzky, 2023-10-16 Falls are a major health challenge and represent the leading cause of accidental death in older adults. It is essential to identify those factors associated with an increased risk for falls and to develop specific programs for fall prevention. The risk of falling can be assessed in older adults using different parameters, including biological, psychosocial, socioeconomic, behavioral, and environmental factors. For example, the risk of falls increases when vision is impaired, when sleep quality is poor, or when mood is depressed. Moreover, physical parameters, such as changes in body mass and blood pressure are risk factors for falls in older adults.
