**who does ncb management services collect for:** *Collective Management of Copyright and Related Rights* João Pedro Quintais, Daniel Gervais, 2025-03-18 Over the past three decades, collective management organizations (CMOs) have become the nerve centres of copyright licensing in virtually every country. Their expertise and knowledge of copyright law and management have proven essential to making copyright work in the digital age. But they have also been at the centre of debates about their effectiveness, transparency and governance. This book provides an in-depth analysis of the various operational CMO models, their rights and obligations vis-à-vis authors, other right-holders and users, the acquisition of the legal authority to license and (most importantly) the rights to license digital uses of protected material, and the creation (or improvement) of information systems to deal with the increasingly complex tasks of rights management and licensing. All chapters have been updated since the third (2015) edition and several new chapters have been added, including a new chapter on the economics of collective management and a chapter on limitation-based remuneration rights. Factors considered include the following: cases where the unavailability of adequate licensing options makes authorized use of material protected by copyright or a related right difficult or impossible taking transaction costs into account; the growing importance of extended repertoire systems and different forms of collective licensing with extended effect; transnational and multi-territorial licensing; the relationship among collective management, rights to remuneration, and the ways in which CMOs acquire authority to license; the threat of

monopolies or regional oligopolies for the management of online music rights; the impact of new technologies on collective rights management and licensing; and the role of 'families' such as the International Confederation of Societies of Authors and Composers (CISAC) and the International Federation of Reproduction Rights Organizations (IFRRO). The analysis covers the 1996 WIPO Copyright Treaties, the US Digital Millennium Copyright Act, the Santiago Agreement, relevant EU policy documents and legislative instruments – including the 2014 Collective Rights Management Directive and 2019 Copyright in the Digital Single Market Directive – and the work of the UN Committee on Economic, Social and Cultural Rights. Part I presents a number of horizontal issues that affect collective management in almost every country. Part II is organized geographically, focusing on systems that are representative of the main models used in different countries and regions. Each country- or region-specific chapter provides a historical overview and a description of existing CMOs and their activities, provides financial information where available, describes how CMOs are supervised or controlled by legislation, and offers reflections on the challenges facing CMOs in that country or region. Some of these national and regional commentaries are the only such sources of information available in English. Whatever the future of copyright, it is clear that users will continue to want access and the ability to legally reuse material, and that authors and other rights holders will want to ensure that they can place some reasonable limits on those uses, including the ability to monetize commercially relevant uses. CMOs will certainly be critical intermediaries in this process. The fourth edition of this important resource, with its key insights into the changing nature of collective management, will be of immeasurable value to anyone involved in shaping collective management policy or dealing with the increasingly complex legal issues that arise in copyright matters in the digital age, and even more in the age of artificial intelligence and the training of large language models.

**who does ncb management services collect for: Intellectual Property as a Complex Adaptive System** Kamperman Sanders, Anselm, Moerland, Anke, 2021-12-07 This incisive book examines the role of Intellectual Property (IP) as a complex adaptive system in innovation and the lifecycle of IP intensive assets. Discussing recent innovation trends, it places emphasis on how different forms of intellectual property law can facilitate these trends. Inventors and entrepreneurs are guided through the lifecycle of IP intensive assets that commercialise human creativity. Utilising a range of sector specific, interdisciplinary and actor-focused approaches, each contribution offers suggestions on how Europe's capacity to foster innovation-based sustainable economic growth can be enhanced on a global scale.

**who does ncb management services collect for: Unlocking SME Finance in Asia** Naoyuki Yoshino, Farhad Taghizadeh-Hesary, 2019-07-01 There is limited access for small and medium-sized enterprises (SMEs) to bank credit. This book proposes new and sustainable models to help ease the access of SMEs to finance and boost economic growth and job creation in Asia. This book looks at the difficulties of SMEs in accessing finance and suggests ways on how to mitigate these challenges. It suggests how we can develop credit information infrastructures for SMEs to remedy the asymmetric information problem and to utilize credit rating techniques for the development of a sustainable credit guarantee scheme. The book provides illustrations of various Asian economies that implemented credit guarantee schemes and credit risk databases and is a useful reference for lessons and policy recommendations.

**who does ncb management services collect for: Water Security in the Middle East** Jean

Axelrad Cahan, 2017-01-02 Water Security in the Middle East explores the extent and nature of water security problems in transboundary water systems in the Middle East. This collection of essays discusses the political and scientific contexts and the limitations of cooperation in water security. The contributors argue that while conflicts over transboundary water systems in the Middle East do occur, they tend not to be violent nor have they ever been the primary cause of a war in this region. The authors place water disputes in larger political, historical and scientific contexts and discuss how the humanities and social sciences could contribute more towards this understanding. They also contend that international sharing of scientific and technological advances can significantly increase access to water and improve water quality. While scientific advances can and should increase adaptability to changing environmental conditions, especially climate change, national institutional reform and the strengthening of joint commissions are vital. The contributors indicate ways in which transboundary cooperation may move from simple and intermittent coordination to sophisticated, adaptive and equitable modes of water management.

**who does ncb management services collect for: The World Bank Group and Public Procurement** World Bank World Bank, 2015-02-13 The unanticipated spike in international food prices in 2007-08 hit many developing countries hard. International prices for food and other agricultural products increased by more than 100 percent between early 2007 and mid-2008. Prices for food cereals more than doubled; and those for rice doubled in the space of just a few months. The food price increases were particularly hard on the poor and near-poor in developing countries, many of whom spend a large share of their income on food and have limited means to cope with price shocks. An estimated 1.29 billion people in 2008 lived on less than \$1.25 a day, equivalent to 22.4 percent of the developing world population. In addition, the Food and Agriculture Organization estimated that 923 million people were undernourished in 2007. Simulation models suggested that poverty rose by 100-200 million people and the undernourished increased by 63 million in 2008. The World Bank organized rapidly for short-term support in the crisis, launching a fast-track program of loans and grants, the Global Food Crisis Response Program (GFRP). The GFRP mainly targeted low-income countries, and provided detailed policy advice to governments and its own staff on how to respond to the crisis. The Bank also scaled up lending for agriculture and social protection to support the building of medium-term resilience to future food price shocks. The International Finance Corporation responded by sharply increasing access to liquidity for agribusinesses and agricultural traders in the short and medium term, as well as new programs to improve incentives for agricultural market participants. This evaluation assesses the effectiveness of the World Bank Group response in addressing the short-term impacts of the food price crisis and in enhancing the resilience of countries to future shocks.
