women s health unplugged: Peace Building Through Women's Health Norbert Goldfield, 2021-04-28 This book is an examination of the Israeli-Palestinian conflict through psychoanalytic, sociopsychological, and nationalistic lenses, highlighting the successes and the hurdles faced by one organization, Healing Across the Divides (HATD), in its mission to measurably improve health in marginalized populations of both Israelis and Palestinians. Peace Building through Women's Health begins with a summary of the peace building through health field and a psychoanalytic, sociopsychological examination of the Israeli-Palestinian conflict. After a series of informative case studies, the book concludes with an analysis of how this organization has evolved its peace building through health approach over the fifteen years since its founding. Working with community groups, HATD has measurably improved the lives of more than 200,000 marginalized Israelis and Palestinians. In the process, it also improves the effectiveness of the community group grantees, by offering experienced management consulting and by requiring rigorous ongoing self-assessment on the part of the groups. IHATD hopes that, in the long term, some of the community leaders it supports will be tomorrow's political leaders. As these leaders strengthen their own capabilities, they will be able to increasingly contribute to securing peace in one of the longest running conflicts in the world today. Peace Building through Women's Health will be invaluable to public and mental health professionals interested in international health, peace and conflict studies, and conflict resolution.

women s health unplugged: *Women in STEM Education* Lisbet Rønningsbakk, Karen Blackmore, 2023-12-05 We are delighted to present the inaugural "Women in Education" series of article collections. At present, less than 30% of researchers worldwide are women. Long-standing biases and gender stereotypes are discouraging girls and women away from science-related fields and from pursuing a career in academia and in different professional environments, especially when linked to STEM fields. Science and gender equality are, however, essential to ensure sustainable development in all disciplines. In order to change traditional mindsets, gender equality must be promoted, stereotypes defeated, and girls and women should be encouraged to pursue academic careers. Therefore, Frontiers in Education is proud to offer this platform to promote the work of women scientists, educators and professionals, across all fields of STEM Education. Female representation still needs to be improved in key roles in the field, and the way in which an equitable education contributes to fairer and less biased academic and professional environments worldwide should be more investigated. The work presented here highlights the diversity of research performed across the entire breadth of STEM Education research and presents advances in theory, experiment, and methodology with applications to compelling problems.

women s health unplugged: Communicating Women's Health Annette Madlock Gatison, 2015-12-07 This volume explores the conditions under which women are empowered, and feel entitled, to make the health decisions that are best for them. By giving voice to these women's experiences, the book shines a light on ways to improve health communication for women. Bringing together personal narratives, key theory and literature, and original qualitative and quantitative studies, the book provides an in-depth comparative picture of how and why women's health varies for distinct groups of women. Organized into four parts—historical influences on patient and provider perceptions, breast cancer the silence and the shame, make it taboo: mothering, reproduction, and womanhood, and sex, sexuality, relational health, and womanhood—each section is introduced with a brief synthesis and discussion of the key questions addressed across the chapters.

women s health unplugged: Issues in Medical Law and Ethics Derek Morgan, 2012-12-06 Thirty years ago, English jurist Patrick Devlin wrote: Is it not a pleasant tribute to the medical profession that by and large it has been able to manage its relations with its patients ... without the aid of lawyers and law makers. Medical interventions at the beginnings and the endings of life have rendered that assessment dated if not defeated. This book picks up some of the most important of those developments and reflects on the legal and social consequences of this metamorphosis over the past ten years, and will be of interest to students of law, sociology and ethics who want a considered and critical introduction to, and reflection on, key issues in these pivotal moments of human life.
