words that start with j in science: Developing Models in Science Education J.K. Gilbert, C. Boulter, 2012-12-06 Models and modelling play a central role in the nature of science, in its conduct, in the accreditation and dissemination of its outcomes, as well as forming a bridge to technology. They therefore have an important place in both the formal and informal science education provision made for people of all ages. This book is a product of five years collaborative work by eighteen researchers from four countries. It addresses four key issues: the roles of models in science and their implications for science education; the place of models in curricula for major science subjects; the ways that models can be presented to, are learned about, and can be produced by, individuals; the implications of all these for research and for science teacher education. The work draws on insights from the history and philosophy of science, cognitive psychology, sociology,

linguistics, and classroom research, to establish what may be done and what is done. The book will be of interest to researchers in science education and to those taking courses of advanced study throughout the world.

words that start with j in science: Literature and Science as Modes of Expression F.R. Amrine, 2012-12-06 On the 25th anniversary of the founding of the Boston Studies series in 1985,

Cohen, Elkana, and Wartofsky wrote in another preface such as this that the time had come for establishing institutions supporting a vision to which the series had been devoted since its inception, namely that of a more broadly conceived, interdisciplinary study of the history and philosophy of science: In recent years it has become evident that, in addition to serious and competent disciplinary work on the specifics of the History of Science, the Philosophy of Science and the Sociology of Science, there is now a growing need to develop a problem oriented approach which no longer distinguishes between these three specialties in a cut and dried way. Since the time has come for such an approach, the institutional tools should be provided. A way to do so would be . . . to organize colloquia and to publish good papers stemming from these, without attempting to organize the papers under the separate rubrics of History of Philosophy or Sociology of Science; and moreover to consider it natural that any fundamental issue of the foundations of the sciences, or their place in a culture and the way they are institutionalized in the societal web, is still our concern, no matter whether we are a professional scientist, historian or philosopher who deals with the problem (p. vii).
