Contrary to popular belief, the reason is not audiences or marketing, but Wall Street. In this book, Andrew deWaard shows how the financial sector is dismantling the creative capacity of cultural industries by upwardly redistributing wealth, consolidating corporate media, harming creative labor, and restricting our collective media culture. Moreover, financialization is transforming the very character of our mediascapes for branded transactions. Our media are increasingly shaped by the profit-extraction techniques of hedge funds, asset managers, venture capitalists, private equity firms, and derivatives traders. Illustrated with examples drawn from popular culture, *Derivative Media* offers readers the critical financial literacy necessary to understand the destructive financialization of film, television, and popular music—and provides a plan to reverse this dire threat to culture.

wood creek capital management: Good Derivatives Richard L Sandor, 2012-04-03 Through the eyes of an inventor of new markets, Good Derivatives: A Story of Financial and Environmental Innovation tells the story of how financial innovation – a concept that is misunderstood and under attack - has been a positive force in the last four decades. If properly designed and regulated, these “good derivatives” can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in an engaging, narrative style, Good Derivatives will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a

recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.

wood creek capital management: Designing a Sustainable Financial System Thomas Walker, Stéfanie D. Kibsey, Rohan Crichton, 2018-01-22 This edited collection brings together leading theoretical and applied research with the intent to design a sustainable global financial future. The contributors argue that our world cannot move toward sustainability, address climate change, reverse environmental degradation, and improve human well-being without aligning the financial system with sustainable development goals like those outlined by the United Nations. Such a system would: a) be environmentally and socially responsible; b) align with planetary boundaries; c) manage natural resources sustainably; d) avoid doing more harm than good; and e) be resilient and adaptable to changing conditions. The overarching theme in this collection of chapters is a response to the worldwide, supranational sustainable finance discussions about how we can transition to a new socio-ecological system where finance, human well-being, and planetary health are recognized as being highly intertwined.

wood creek capital management: Marketing of Hedge Funds Matthias Bekier, 1996 Hedge funds have recently received significant attention from both media and regulators, getting blamed for everything from causing volatility in the financial system to the collapse of investment banks. This thesis attempts to define hedge funds and make transparent the role they play in the investment system. Particular emphasis is given to understanding the marketing approaches pursued by hedge funds and by showing how well they match the needs of both private and institutional investors.

wood creek capital management: Carbon Hunters: Reflections And Forecasts Of Climate Markets In The 21st Century Richard L Sandor, Paula Diperna, 2025-09-23 The book is a unique overview of the launching of carbon markets worldwide, and the evolution of those markets as critical tools to manage climate change and other environmental problems. The book also presents uniquely personal narratives of the authors, who have each led unconventional and exciting professional lives, meeting by coincidence, and then working together on the largest environmental and economic problems of our times — addressing climate change with flexibility and maximum potential. Given the unique backgrounds of the authors as pioneers in their respective domains, the book is likely to have no comparable or 'competitive' books. Carbon Hunters also situates the evolution of carbon markets as a journey of invention, imagination and creativity, bringing to life in real-world terms the academic and intellectual underpinnings of an exceptional and rewarding journey — inventing and activating new markets to save our planetary home. Finally, the book offers catalytic 'Food for Thought' and Forecasts on how carbon markets can shape the future of environmental stewardship.
